INDUSTRY DIVISION

Roger H. Bugenhagen, Chief

ACKNOWLEDGMENTS—Many persons participated in the various activities of the 1977 Census of Manufactures. Primary direction of the program was performed by **Shirley Kallek,** Associate Director for Economic Fields, and **Richard B. Quanrud,** Assistant Director for Economic and Agriculture Censuses (until July 1981).

This report was prepared in the Industry Division under the general direction of **Milton Eisen,** Chief (until February 1980), and **Roger H. Bugenhagen,** his successor. **Arthur W. Horowitz,** assisted by **John S. Berube,** was responsible for overall management of the census and was the Division's liaison officer with other divisions.

Program responsibility was shared by the following individuals who participated importantly in the entire program. **Dale W. Gordon,** Census Durables; **Michael J. Zampogna,** Census Nondurables; **Ruth A. Runyan** (until May 1978), and **John P. Govoni,** her successor, Census Subject Reports; **Paul F. Berard,** Current Durables; **Robert J. Nealon,** Current Nondurables; and **John P. McNamee,** Minerals.

Edward A. Robinson made significant contributions to the basic economic concepts and content of the census. The mathematical techniques used in sampling the respondents were developed by **Donald F. Clark,** assisted by **Preston J. Waite, Gary L. Kusch, Stacey Cole,** and **Marlene Altman. Kenneth I. Hansen,** Chief of the Annual Survey of Manufactures Branch, assisted by **Robert Rosati** and **Stephen Raley,** was responsible for the annual survey component of the census of manufactures. Specifications for the complex computer edit were the responsibility of the staffs of the Statistical Methods and Annual Survey of Manufactures Branches. Computer programs were prepared under the direction of **Howard N. Hamilton** (until November 1978), and **William Norfolk,** his successor. Assisting were **Mary H. Johnson, Sarah W. Mathis, George Anderson, Gerald Turnage, David L. Onions, Robert Brown, Mark I. Kronisch,** and **Barbara Lambert.**

Systems and procedures for mailout and clerical processing were developed in the Economic Surveys Division by **Roger H. Bugenhagen,** Chief (until February 1980), assisted by **Andrew L. Grieco, Robert E. Crowther,** and **Joel Richardson.** Clerical procedures were developed by **Robert Brand,** assisted by **Haydn R. Mearkle, Helen L. Barton,** and **Beverly M. Eng. Walter E. Neece,** assisted by **C. Harvey Monk,** had staff responsibility for industry classification procedures. Administrative record processing specifications were developed by **Lawrence A. Blum** and **John M. Sullivan** under the direction of **Samuel Schweid.** Electronic computer programs for check-in and administrative records were developed and supervised by **Robert G. Willner** and **Donald H. Danbury** under the direction of **Paul E. Poissant.** Data input procedures were developed by **Leonard M. Tauber** and quality control procedures by **Jean F. Biggs.**

Forms design was performed in the Administrative Services Division, **Henry J. Husmann,** Chief (until August 1980). The entire staff of the Forms and Mail Management Branch made significant contributions in planning, design, review, and composition of the forms.

Within the Publications Services Division, many individuals made significant contributions in publication planning and design, editorial review, composition, and printing procurement. These operations were performed under the direction of **Raymond J. Koski,** Chief, assisted by **Milton S. Andersen, Arlene C. Duckett, Gerald A. Mann, Helen M. Curtis, Jacqueline A. Gans, John Overby, Nicholas Preftakes, Rosemary B. Vance,** and **Robert Warunek.**

Clerical and data keying operations were performed in the Data Preparation Division at Jeffersonville, Ind., under the direction of **Don L. Adams,** Chief, assisted by **Robert L. Allen, Rebecca Lamon,** and **George Wilson.** The clerical geocoding effort was directed by **Wendell McManus.**

Computer processing was directed by **C. Thomas DiNenna,** Chief, Computer Services Division. **John E. Halterman, Jesse J. Verdeja, Willie E. Clark,** and **Norman W. Larsen** provided staff assistance.

Lawrence Cox, Statistical Research Division, and **Lawrence E. Cornish,** Systems Software Division, made significant contributions by developing special-purpose computer programs for disclosure analysis and publication preparation.

Donald E. Young, Lawrence H. Lyons, and **Robert S. Taylor,** of the Office of the Assistant Director for Economic and Agriculture Censuses, participated in overall planning and review of the census operations.

Special acknowledgment is also due the many industries whose cooperation has contributed to the publication of these data.

Data in this publication may differ slightly from the industry and area reports previously published. These differences are due to corrections which were made for minor errors identified after the industry and area reports were issued. This report reflects these corrections.

All errors identified in any phase of the review were carried to the computer file used to produce the final subject and special reports. Therefore, those reports represent the most accurate data available.

I. General Background

1. HISTORY OF THE ECONOMIC CENSUSES

General—The economic censuses provide a comprehensive statistical profile of a large segment of the national economy. This program includes censuses of manufactures, retail trade, wholesale trade, service industries, mineral industries, and construction industries. In 1977, these industries accounted for nearly 61 percent of the $1,894.5 billion of the gross domestic product and 70 percent of that originating in the private sector. The principal industry groups not covered were finance, insurance, and real estate; agriculture and forestry; communications; electric, gas, and sanitary services; and transportation. Limited information on transportation is collected, e.g., truck registration and distances travelled, and shipments of commodites by type of transport and distance shipped.

Uses and users of census data—The economic censuses are the primary source of facts about the structure and functioning of a major part of the economy. They are used extensively in compiling the benchmark measures of the national accounts. Census data also serve as weights or benchmarks for indexes of industrial production, productivity, and price; as well as many current surveys of industrial activity.

There is widespread use of the economic censuses, by the Government, in setting economic policy and monitoring economic programs. Manufacturers and distributors rely on census data to measure their potential geographic and industrial markets. The censuses provide the facts needed for economic forecasting; analysis of sales performance; the layout of sales territories; the allocation of advertising budgets; and the location of plants, warehouses, and stores. Trade and professional associations rely on census information to determine how their industries are changing; chambers of commerce and State and local governments depend on them to assess changes in the business structure in their areas. Business magazines and academic researchers rely on census facts as background for many of their articles.

Census reports are purchased by thousands of business and other users; census data are republished and widely circulated by trade associations, business journals, and the daily press; and census volumes are available in all the major public and college libraries.

History—The first economic type census covered the year 1809, when inquiries on manufacturing were included with the 1810 Census of Population. By modern standards, the results of this

pioneer effort would be considered unsatisfactory.[1] However, continued interest in the Nation's economic growth led to successive improvements in economic census-taking during the 19th century. By 1890, the statistical standards and procedures followed in censuses reached a full professional quality.

All of the decennial censuses from 1810 through 1940, with the exception of 1830, included questions on manufacturing. Inquiries on mining first appeared in 1840, and censuses of mineral industries were conducted decennially through 1940. Although some business-related data were collected in 1840, the first census of business was taken for the year 1929. This included retail trade, wholesale trade, and construction; beginning with 1933, selected service trades were covered. Dates of these and other economic censuses from 1809 are shown in table A.

Enterprise statistics—Through the history of the economic censuses, the unit of enumeration has been the establishment—i.e., a single physical location engaged in a specific line of business (for more discussion, see section 8). This unit is best suited for obtaining measures of direct output and input—labor, material, capital, etc. It is also best suited for providing refined industry and geographic tabulations. Statistics measuring overall income and balance sheet data are best collected at the company or enterprise level. In the early 19th century, these two business units were often identical. With the rise of large-scale operations, it became quite common for the large companies to operate separate manufacturing establishments in a number of diverse industries so that today the establishment and enterprise frequently are not the same. Enterprise measures and balance sheet data have typically been provided by the Internal Revenue Service (IRS) in its Statistics of Income and Federal Trade Commission (FTC) in its Quarterly Financial Report of Corporations.

The Bureau of the Census, as a result of the coordinated collection and tabulation of comparable data for several economic sectors in 1954, also developed an enterprise statistics

[1]Actual coverage varied from census to census. [2]Limited information only.

[1] For an appraisal of early censuses of manufacturing, see Meyer H. Fishbein, The Censuses of Manufactures 1810-1890. National Archives Publication No. 63-22, June 1963, Government Printing Office.

program. This program relates census company-level data to data measuring the activities of individual operating units or establishments within the companies. Thus, a measurement of the integration and diversification of the American enterprise system became available. The enterprise statistics program also made it possible to link census establishment-based data on a modified basis to enterprise-based statistical systems such as the IRS's Statistics of Income for Corporations.

Legal provisions—The periodic economic censuses are required by law. Title 13 of the United States Code specifies the frequency of the censuses, the kinds of activities to be covered, the obligation to report, the penalties for failure to report, and the confidentiality of returns. It also authorizes the use of sampling techniques in conducting censuses. As amended in 1964, Title 13 requires the economic censuses to be taken at 5-year intervals, covering the years ending in "2" and "7." The next censuses will cover the year 1982 and will include the census of agriculture, which has been customarily conducted on a different time sequence from the other economic censuses. The pertinent portions of Title 13 are quoted in appendix E.

2. CHARACTERISTICS OF THE INDUSTRIAL SECTOR

General—Manufacturing is the largest sector of the economy. In 1977, manufacturing plants employed nearly 20 million persons, or 20 percent of the civilian labor force of 97.4 million. As shown in table B, gross domestic product (GDP) originating in manufacturing averages almost 24 percent of the total. Wholesale and retail trade combined was the next largest sector with 17 percent of the GDP.

Cyclical changes—The need for frequent and comprehensive statistics on manufacturing derives as much from its sensitivity to cyclical influences as from its relative size. Cyclical changes in income originating in manufacturing tend to be relatively larger than in the economy as a whole, as can be seen in the movement of national income originating in manufacturing from 1929 to 1933 to 1939 in table C.

Within manufacturing, durable goods industries accounted for about 60 percent of all manufactures during recent periods. This category tends to be more volatile than nondurable goods,

[1]Gross national product is the market value of goods and services produced by labor and property supplied by residents of the United States. Gross domestic product is the value of goods and services attributable to labor and property located within the United States. It equals GNP less the "Rest of the world" which is the net inflow of labor and property income from abroad.

generally accounting for a smaller percentage of all manufactures during periods of contraction and a larger percentage during periods of expansion. In the early thirties, for example, as shown in table C, durable goods manufacturing fell to only about one-third of the total.[2]

Geographic distribution—In the early and middle 19th century, manufacturing activity was concentrated in the Northeast. Over the past 130 years, as shown in table D, there has been a steady decline in the proportion accounted for by the Northeastern States. Industry expanded into the north central region in the

[1]Gross national product is the market value of goods and services produced by labor and property of residents of the United States. Gross domestic product is the value of goods and services produced within the United States. National income is gross national product less capital consumption allowances, indirect business taxes, and business transfers plus subsidies less surplus of government enterprises.

Source: Survey of Current Business.

[2]Based on national income rather than gross domestic product (GDP). Industry detail for GDP is available only from 1947; whereas, industry detail for national income is available from 1929 and encompasses the very depressed period of the 1930's.

Table D. **Employment in Manufacturing Establishments by Region: 1849 to 1977**

Year	United States	North-east	North Central	South	West
	Number of employees (thousands)				
1977	19,590	5,008	6,272	5,593	2,717
1972	19,029	5,306	6,135	5,221	2,367

latter part of the 19th century and, in more recent years, displayed a marked growth in the South and West.

Size distribution—Manufacturing activity tends to be characterized by relative large-scale operations. While there are many small manufacturing plants, they account for a relatively small part of the total output of goods. As shown in table E, over half of the plants covered in the 1977 Census of Manufactures were very small, employing less than 10 workers, but they accounted for less than 3 percent of total manufacturing activity as measured by value added by manufacture. (See appendix A for definition of value added).

Table E. **Number of Establishments and Value Added by Manufacture by Size of Establishment: 1977**

(Cumulative percentage)

Employment size class	Establishments	Value added by manufacture
All establishments	100.0	100.0
1 to 4 employees	40.1	1.0
1 to 9 employees	53.8	2.4
1 to 19 employees	67.6	5.2
1 to 49 employees	82.3	12.2
1 to 99 employees	89.9	20.5
1 to 249 employees	96.0	36.3
1 to 499 employees	98.3	51.0
1 to 999 employees	99.3	65.8
1 to 2,499 employees	99.8	80.1

3. CENSUS OF MANUFACTURES—BENCHMARK STATISTICS

In the farm-oriented economy of the early 19th century, the need for industrial statistics for setting government policy, except for tariffs and taxes, was slight. A few series on physical output of commodities originated either from private sources (flour, iron, steel, etc.) or as a byproduct of tax collection or other government functions (liquors, beer, tobacco products, etc.). The only sources of information on the growing manufacturing sector were the censuses of manufactures, then taken at 10-year intervals. Today, the need for industrial statistics has greatly increased so there is now a vast array of detailed information covering virtually every measurable aspect of industrial activity including employment; payrolls; hours worked; production; prices; inventories; orders; investment in structures, machinery, and equipment; and consumption of raw materials, fuels, and water. Many of these statistics are available at frequent intervals and very promptly after the close of the accounting period. Sophisticated indicators of economic change have also been developed, such as price and production indexes and the gross national product accounts that are published at monthly or quarterly intervals.

The census of manufactures, though conducted only at 5-year intervals, still plays an essential role since no other source measures the structure of the industrial sector in such a comprehensive and detailed way.

For every manufacturing plant with one employee or more, the census obtains data on its input of labor, materials, and capital; its output of products and services; its location; and the legal form of organization of the owning firm.[3]

A set of summary of general statistics are developed for each establishment (that is, total employment, payroll, number of production-worker hours and wages, cost of materials, value of shipments, inventories, capital expenditures, and value added by manufacture) and aggregated by industry, by area, by employment size of establishment, by degree of product specialization within plant, and by type of ownership. Reports are published on the detailed industrial characteristics of each State and large standard metropolitan statistical area (SMSA); and overall measures of manufacturing activity are shown at the county and individual city level provided the information can be published without compromising the confidentiality of individual company data. Since census legislation guarantees confidentiality to the firms that are required to report, it is frequently necessary to suppress some aggregates. Since a significant amount of industry detail cannot be published for the 3,140 counties and county equivalents in the United States, a special computer tape on Location of Manufacturing Plants was developed to provide a complete industry-county cross-section description of manufacturing. This tape includes the number of establishments in each of the 450 industries by county or county-equivalent area, by employment size. Comparison of this complete profile between censuses is used to study shifts in the geographic dispersion of industries and the industrial structure of local areas.

[3] Since 1967, some of this information for 120,000 small companies was not obtained directly but estimated from other government records. See the discussion of coverage of establishments in items 4 and 6.

The census of manufactures also facilitates the conduct of more frequent surveys on a sample basis. In fact, the present legislation specifying that censuses be conducted every 5 years authorizes an annual survey of manufactures (ASM) on a sample basis during the intervening years. The 5-year census provides the framework for selecting a new sample and the periodic universe levels to benchmark the sample estimates. The sample includes about one-fifth of all establishments. All large establishments are included in every sample; the smaller are selected proportionately to their size and are replaced at the end of each census. Thus, there is an annual updating of the census of manufactures in terms of broad measures of economic activity. The ASM contains the same basic measures of economic activity of the plant such as employment, payrolls, value of shipments, value added by manufacture, as does the census of manufactures, but obtains less detailed information on products, materials consumption, and equipment.[4]

The census of manufactures also is used to update other indicators of economic activity, especially the national income accounts. Census data on materials consumed and product output by industry are basic to the input-output matrix developed by the Bureau of Economic Analysis (BEA) for the manufacturing sector. The Federal Reserve Board's monthly Index of Industrial Production—a key indicator of current economic activity—relies on census industry and product data as benchmarks and weights to sum industries to higher levels of aggregation. The census and ASM also provide benchmarks for hundreds of monthly and quarterly surveys of commodity output conducted by the Bureau of the Census, other government agencies, and by manufacturers' associations.

4. INDUSTRY CLASSIFICATION OF ESTABLISHMENTS

Structure of the SIC System—The establishments in the census of manufactures are classified according to the SIC Manual. The SIC Manual covers the entire field of economic activities, subdivided as follows:

Industrial division	Title	Major groups
A	Agriculture, forestry, and fisheries	01-09
B	Mining	10-14
C	Contract construction	15-17
D	Manufacturing	20-39
E	Transportation, communication, electric, gas, and sanitary services	40-49
F	Wholesale and retail trade	50-59
G	Finance, insurance, and real estate	60-67
H	Services	70-89
I	Public administration	91-97
J	Nonclassifiable establishments	99

Below the major group level, the SIC provides for 3-digit groups and finally for 4-digit industries. To illustrate—

Division D—Manufacturing

Major Group. . . . . Food and kindred products
Industry group 202 . . . . . Dairy products
Industry 2023. . . . . Condensed and evaporated milk

The SIC system was developed to classify establishments as distinguished from similar systems used to classify companies or enterprises. An establishment is defined as a single physical location engaged in one of the industry categories of the SIC. (See pp. 1-9 for the application of this definition to collecting data in the economic censuses.)

This SIC system is the responsibility of an intragovernmental technical committee headed by the Office of Federal Statistical Policy and Standards, formerly part of the Office of Management and Budget, but transferred to the Department of Commerce in 1977. The system is used by all Federal Government agencies engaged in the classification of establishments. Many State and local governments and business concerns also organize their own records along SIC system lines in order to facilitate comparison with federal statistics.

The first SIC Manual was issued in 1939. For the manufacturing sector, the nucleus was the set of industry classifications developed over many years for use in the census of manufactures. A revised manual was issued for the manufacturing industries in 1945 and with minor modifications, used in the 1947 and the 1954 Censuses of Manufactures. In 1957, the SIC Manual was extensively revised for manufacturing industries and the historical comparability of some data was seriously affected. The introduction and appendixes to the 1958 census volumes discuss in detail this revision and its effects on census series. Only minor revisions of the SIC Manual were made between 1958 and 1967. The next extensive revision of the SIC Manual affecting the comparability of industry data was completed in 1972. These revisions and their impact on comparability appear in appendix C of the 1972 Census of Manufactures volumes.

Structure of the Manufacturing SIC System—For manufacturing, there are 20 2-digit SIC Major Groups (20 to 39) which are subdivided in 144 3-digit SIC Groups (201 to 399) and into 452 4-digit industries (2011 to 3999). The Bureau of the Census combined some small industries in order to publish data.

Most of the 452 manufacturing industries are defined in terms of specific groups of related products. Usually the products are made of similar materials and by similar processes and many are competitive but the SIC system does not necessarily bring together products which are close substitutes

[4] Since the ASM is based on a sample, the cross-classifications by industry and by area are fewer than in the census of manufactures. At the U.S. level, statistics are published in the annual survey for practically all of the 450 industries. However, at the SMSA level, statistics are published only for 3-digit and 2-digit industry groupings. At the county level, information is published for about 10 percent of the 3,140 counties and equivalent areas. These 300 odd counties are the larger ones in terms of manufacturing activity and account for about 80 percent of total manufacturing employment. Data for cities are shown for those cities having over 20,000 manufacturing employees.

in use and competitive in markets. In determining the boundaries of industries,[5] it is essential that each industry comprise a group of establishments that are highly specialized in making products that define the industry (primary products) and that a large proportion of all the products be made in establishments classified in the industry. While similarity of product is most frequently the determining factor in defining an industry, some industries are defined in terms of the processes or equipment used regardless of the final product of the establishment. (Example: Industry 3361, Aluminium Foundries (castings).) A small number of industries are basically defined by material used as well as final product of the plant. (Example: Industry 2521, Wood Office Furniture, and Industry 2522, Metal Office Furniture.)

There are wide differences among industries in their purity—i.e., the extent to which the establishments classified in the industry:

a. Account for the total production of commodities "primary" to the industry.
b. Produce products or services "belonging" to other industries (that is, secondary products).
c. Use similar materials or processes.

These variations are frequently construed to be shortcomings. However, these limitations in the classification structure arise from the inherent complexity of our economic system and from the variation in types of production that take place in individual establishments.

While the SIC system is the basis for aggregating census data, the data collected, in turn, provide the statistical basis for periodic critical evaluation of that classification system and its revision.[6]

No general-purpose system of industrial classification can satisfy all users of census data. Some business users are interested primarily in a narrow range of products which they and their competitors produce. Others are involved in a wide range of products that move through the same marketing channel. Others seek data relating to the consumers of one or more types of materials. Some are interested only in the data for highly specialized plants; others for plants producing a "full line" of products. Those studying productivity may require data for plants using the same techniques.

The large number of SIC industries provides the analyst with the "building blocks" for making useful approximations, even if specific data cannot be developed to resolve many of these problems. A single general-purpose system of classification can only partially satisfy these diverse needs; a point is soon reached at which the adaptation of a system to serve one use better will reduce its ability (sometimes disproportionately) to serve an alternative use.

Accordingly, users of data frequently reqroup detailed SIC industries differently from the 2- and 3-digit SIC categories. The Federal Reserve Board for many years has made combinations to stress such characteristics of products as durable, nondurable, consumer, producer, finished, intermediate goods, etc. Other public and private agencies also recombine the detailed classes. The 4-digit industries are more susceptible to allocation to such categories than the 2-digit SIC groups.

Subindustries—The Bureau of the Census frequently has further classified some of the basic 4-digit SIC industries into "subindustries." Subindustries are employed where there are wide disparities in the input-output relationships (or operating ratios) of the plants in the industry because of differences in the degree of vertical integration, technology, methods of distribution, geographic location, types of materials used, etc. In about 61 manufacturing industries, subindustries were established for editing purposes and many were regarded as significant enough to be used for publication. For example, the bakery industry (SIC 2051) is subdivided into wholesale bakeries, chain-store bakeries, home-service bakeries, and retail multioutlet bakeries; and many apparel industries (major group 23) are subclassified into manufacturers, contractors, and jobbers.

To provide a further measurement of variations with 4-digit industries, the Bureau of the Census also subclassified establishments by the degree to which they produce the primary products or specific classes of primary products of the 4-digit industry into which they are classified. This is, in effect, a subindustry classification based on the degree of product specialization which is published in table 5a in the industry statistics chapters.

Definition of manufacturing—Manufacturing includes a wide range of activities as defined in the SIC Manual. Manufacturing is the mechanical or chemical transformation of inorganic or organic substances into new products. The assembly of component parts of products is also considered to be manufacturing if the resulting product is neither a structure nor other fixed improvement. These activities are usually carried on in plants, factories, or mills, which characteristically use power-driven machines and materials-handling equipment.

Manufacturing production is usually carried on for the wholesale market, for transfer to other plants of the same company, or to the order of industrial users. Typically, manufacturers do not sell directly to the household consumer, although some (for example, baking, milk bottling, etc.) sell, chiefly at retail, to household consumers through the mail, through house-to-house routes, or through salesmen. Some service-type activities (enameling, binding, platemaking, etc.) are included in manufacturing if they are performed primarily for trade; but are considered nonmanufacturing if they are performed primarily to the order of the household consumer. On the other hand, some manufacturing industries include business firms which perform only the entrepreneurial functions

[5] Frequently, business analysts and other data users look at a group of products from more than one point of view. For example, modern high-speed computers are classified as office machines. This describes the purpose of the product. In a physical sense, however, such computers would be described as electronic devices. Similarly, paper bags, wooden boxes, glass bottles, tin cans, and steel barrels may all be classified as containers, or they may be individually grouped with other products of similar materials, such as converted paper products, wood products, glass products, etc.

[6] See Industry Classification and Sector Measures of Industrial Production by James W. McKie, Bureau of the Census Working Paper No. 20, 1965, and Historical Comparability of Census of Manufactures Industries, 1929-1958 by Harold T. Goldstein, Bureau of the Census Working Paper No. 9, 1959.

of buying the materials and designing and marketing the product, but have the actual production done on contract (for example, apparel jobbers).

SIC classifies establishments—The SIC system is an establishment classification system, and the census of manufactures is conducted on an establishment basis. That is, a company with operations at more than one location is required to submit a report for each location. On the other hand, a company engaged in distinctly different lines of activity at one location is required to submit a separate report for each activity if the plant records permit such a separation and if the activities are substantial in size.

The requirement that distinct lines of activity at the same location be separately reported was applied only where the establishment produced and shipped significant amounts of products classified in different SIC industries. In widely varying degrees, many manufacturing establishments make products that fall into different SIC industries. Generally, the amounts involved are not significant enough to warrant the filing of separate reports, even if feasible. However, there are a number of locations at which large numbers of employees are engaged in activities defined in different industries of the SIC system. Frequently, companies organize their operations and their records separately for the diverse activities and report them as separate plants. When they do not do so on their own initiative, the Bureau of the Census requests separate reports if it appears that 100 or more employees are involved in each activity. For the most part, companies have cooperated and "split out" the different activities which would otherwise significantly distort the relationship of the industry and product statistics. Not infrequently, however, the two groups of products are made on the same production lines by many of the same employees and cannot be distinguished sufficiently in company records to provide establishment-type reporting.

The SIC system also recognizes special situations where otherwise separately classifiable activities frequently occur at one location. For example, the definition of Industry 2421, Sawmills and Planing Mills, recognizes that sawmills may include logging operations. Similarly, pulpmills operated in combination with papermills are included in one report.

Establishments included in census of manufactures—For the 1947 Census of Manufactures, the censuses have included only establishments with one employee or more. Prior to 1947, different criteria were used to determine if an establishment had to report in the census. In the censuses of 1921 through 1939, establishments with less than $5,000 value of products were excluded. For 1899 to 1919, the limit was $500. The change in the minimum-size criterion to an employment basis in 1947 did not appreciably affect the overall comparability of earlier census figures, except for the number of establishments.[7]

A sample survey of manufacturing plants with no paid employees was conducted in conjunction with the 1958 census. While there were nearly 52,000 establishments in this category in that year, they accounted for only about one-quarter of 1 percent of the total value of shipments of all manufacturing industries. The proportion was higher for certain industry groups such as lumber and wood products, and printing and publishing. Tabulation of IRS data for 1977 indicates that manufacturers with no paid employees continue to be of very minor importance. They contribute less than one half of 1 percent of the total value of shipments of all manufacturing industries.

Special treatment of very small establishments—Beginning with the 1967 census, an effort was made to relieve the very small establishments from the necessity of filing a census report. Approximately 120,000 small single-unit manufacturing firms identified as having less than 10 employees benefited from this procedure. Limited data on payrolls, sales, and industry classification from the administrative records of the Social Security Administration (SSA) and the IRS were made available to the Bureau of the Census for use in the 1967, 1972, and 1977 economic censuses. (These special arrangements safeguarded the confidentiality of both tax and census records.) Data other than payrolls and sales for these small establishments were estimated from historical industry ratios. The effect on industry aggregates is slight in most industries; for manufacturing as a whole, these small "administrative records" account for only 1.2 percent of the value added. Detailed product and materials data for these small establishments were not estimated; the entire value of product shipments and cost of materials was imputed to a "not specified by kind" (n.s.k.) category. If these establishments had been included in the 1972 Census of Manufactures, they were assigned the industry classifications to which they had been coded. If they had started business later, they were coded on the basis of brief descriptions of the general activity of the establishment as reported to the SSA. Where the description is incomplete or there are relatively fine lines of demarcation between industries or between manufacturing and nonmanufacturing activity, the code assigned to an establishment could differ from that which would have been assigned on the basis of more complete product information. Therefore, the Bureau of the Census conducted a special classification survey in order to clarify the industry codes of some of the establishments in the adminstrative record file. All establishments without specific 4-digit codes and those where there could be significant misclassification between manufacturing and other sectors were sent such a questionnaire. Nevertheless, the total establishment counts in most industries should be viewed as approximations rather than precise measurements. The counts for establishments with 20 employees or more are far more reliable than the total number of establishments.

Auxiliary units—Manufacturing requires a wide range of diverse support activities. These activities include movement to the manufacturing plant, storage, the operation and maintenance of plant and equipment, the design of flow of work through the production process, and necessary arrangements for shipment of output to customers. Also included are a host of subsidiary activities associated with the operation of an establishment (for example, management and policy formation, product and market orientation, engineering and quality control,

[7] This point is discussed at greater length in the Introduction to the 1947 volumes.

recordkeeping and accounting, physical security of plant and equipment, and the like).

Support and subsidiary activities may be performed by personnel located at the manufacturing establishments or at a separate location serving one or more manufacturing locations of the same company. These separate locations are referred to as administrative offices and auxiliaries, where these activities are carried on at a different physical location or are performed for more than one plant, they are excluded from the figures for operating manufacturing establishments and are included in the data shown for administrative offices and auxiliaries. (See the description of the questionnaire used for these establishments, form NC-X6, in item 7.)

Border-line activities—The following types of activities, while having some of the characteristics usually found in manufacturing, are considered as nonmanufacturing and, therefore, are excluded from the census:

a. Processing on farms when the raw materials are grown on the farm and the manufacturing activities (poultry dressing, milk and butter production, logging, etc.) are on a small scale without extensive use of paid labor. Also custom milling, egg hatching, cotton ginning, and similar activities closely associated with agriculture are excluded.
b. Mineral preparation such as the crushing, screening, and concentrating of ores. However, mining performed as a secondary activity in conjunction with manufacturing is included in the census unless a separate report for the mining activity was filed; for example, stone and clay mining at cement, lime, and clay products plants.
c. Custom work to the individual order of household consumers. Examples are custom tailoring, woodworking, lettering on monuments, setting of diamonds, and the making of orthopedic appliances.
d. Repair and other service activities, except specified services performed "for the trade." Repair shops of railroads are also excluded.
e. Production of coke "for own use" by establishments owned by public utility companies.

Census establishment-based data measures manufacturing as primary activity. In the census of manufactures, no attempt is made to measure the extent of manufacturing at locations which are not primarily manufacturing plants, such as retail establishments which sell most of their products on the premises directly to household consumers (retail bakeries,[8] ice cream stores, etc.), or manufacturing by construction contractors at the site (for example, production of paving mixtures).

Conversely, it is not unusual for manufacturing establishments to engage also in some nonmanufacturing activities such as repair work, merchandising of products without further processing, and installation work. Ordinarily, these nonmanufacturing receipts are small in relation to the manufacturing activities and, therefore, it is not difficult to determine that the establishments should be included in the manufactures area. However, if the nonmanufacturing activities account for a significant proportion of total receipts of an establishment, the classification of that establishment into the appropriate major economic sector is more difficult.

In the economic censuses, an establishment engaged in a combination of manufacturing and merchandising is assigned either to the manufacturing or the trade industries depending on which of these activities was estimated to account for the larger share of its "value added" or "income produced." This criterion, even though based on approximation, was considered preferable to treating each dollar of receipts from each type of activity equally in determing the primary industry, since manufacturing requires considerably more worker-hours, salaries and wages, and capital inputs per dollar of receipts than either wholesaling or retailing. However, in classifying establishments engaged in manufacturing and also in mining, repair work, installation, construction, or other nonmanufacturing services, dollar receipts were used as the basis of classification because these activities require substantially comparable input per dollar of receipts.

Product codes—The SIC coding system is designed to describe industries and operates in such a way that the definitions become progressively narrower with successive additions of numerical digits. There are 20 very broad 2-digit groups, 144 3-digit groups, and 452 4-digit industries. Based on the SIC Manual, the Bureau of the Census has developed a product coding system along similar lines which contains about 1,500 5-digit product classes and approximately 13,000 individual 7-digit products. (See "the classification of products and materials" below.) The 7-digit products and 5-digit product classes are considered the primary products of the industry with the same first four digits as the product code. For example, the 7-digit product code number 2023212 refers to canned evaporated milk. The first five digits of this code number, 20232, refer to the "product class" canned milk, and the first four digits, 2023, refer to the industry in which these products are made (the condensed and evaporated milk industry). The same system is applied to the coding of materials. The first four digits of a material code (for example, the code number 024111, whole milk used as a material) describe the industry that produces it; e.g., 0241, agricultural industry, dairy farms.[9]

This SIC-based system is simpler than other systems for the coding of industrial products and materials used, since there is a direct numerical relationship between commodities and industries. Complications occur in the few SIC industries defined in terms of processes or equipment used as well as products made. As an example, women's sweaters are produced in knitting mills (industry 2253) and also in cut-and-sew shops (industry 2339). To retain the industry-of-origin concept, therefore, it is necessary to assign different product code numbers to women's sweaters, depending on where they are made.

The SIC-based commodity classification is used in the Bureau of the Census' entire industrial statistics program, including

[8] Separate data for retail bakeries with baking on the premises were included in the retail census publications.

[9] See tables 6a and 7 in volume II.

monthly, quarterly, and annual surveys, and also in the census of wholesale trade. The Bureau of the Census also publishes data on imports and exports in terms of SIC-based categories as well as the traditional Schedule B and TSUSA systems.[10]

Primary and secondary products of establishments shown in the industry statistics chapters—An establishment is classified in a particular industry if its production of the primary products of that industry exceeds in value its production of products of any other single industry. The industry code assigned to the establishment is derived from a summation of values for 7-digit product codes to their 4-digit industry and the selection of the largest 4-digit value as the establishment's industry classification. However, as mentioned earlier, the industry classification of an establishment may be determined not only by the products it makes but also by the processes employed or materials used in making those products.

While some establishments produce only the primary products of the industry in which they are classified, it rarely happens that all the establishments in an industry specialize to this extent. Therefore, the general statistics (employment, payrolls, inventories, value added by manufacture, total value of shipments, capital expenditures, etc.) shown for a industry (tables 1 to 4), encompass not only the primary activities of the establishments in that industry but also their secondary activities. On the other hand, the product statistics in tables 5a and 6a measure the total output of specific products whether they are produced by establishments classified in the same industry as the product or not. For this reason, in relating the general statistics of an industry, especially the industry total value of shipments (tables 1 to 4), to the product statistics (table 6), the composition of the industry's output as shown in tables 5b and 5c should be considered. Table 5c is a matrix table in which the columns break down industry shipments into primary and secondary products and "miscellaneous receipts." The rows of the table show the amount that each industry produced of a given product class.

The extent to which industry and product statistics may be matched with each other is measured by the two ratios shown in table 5b which are computed from table 5c. The first of the ratios, called the primary product specialization ratio, is the proportion of product shipments (both primary and secondary) of the industry made up of primary products. The second, defined as the coverage ratio, is the proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

Degrees of integration—In many industries, establishments use a wide variety of processes and materials to make the products of the industry. An industry classification based on end products may include establishments which are vertically integrated and those which put only the finishing touches on an already highly-fabricated purchased item. For example, in the refrigeration industry, there are some establishments that are almost completely integrated, producing the compressor and condensing unit, electric motor, and even the castings for those intermediate products, as well as the stamping of the case and the final assembly. In other plants, the condensing unit, the motor, and the case may be purchased and merely assembled into the finished product.

In some instances, nonintegrated plants have been placed in separate industry categories from the integrated plants. In many industries, the census provides separate statistics on departmental operations or on the production of intermediate commodities made and used in the producing plant. When an industry includes plants which ship a significant proportion of their output to other plants of the same company, separate figures are usually shown on the interplant transfers.

These differences in the integration of production processes, types of operations, and types of materials used, should be taken into account when relating the general items (employment, payrolls, value added, etc.) to the product and materials data. Where integrated operations are of consequence in an industry, that fact is pointed out in the explanatory text.

Industry code resistance—The production of many establishments is so evenly divided among two or more industry-determining product groups that the industry codes could change from year to year (industry codes can be based on less than half of the total value if there are three or more groups). In the ASM, plants had always been prevented from shifting back and forth among industries due to minor shifts in product mix in the years between censuses by the application of a "resistance formula" in assigning industry classifications. In census years, such resistence was not applied.

A resistance formula of the ASM type was first used in the 1963 Census of Manufactures. In the 1977 census, the formula was applied only to establishments included in the 1976 ASM sample panel with certainty (that is, included with a probability of "1"). In general, these certainty cases were establishments of companies with at least one manufacturing plant with 250 employees or more.

The formula recognizes the conflicting need to maintain continuity in the establishment composition of an industry to measure change and the need to allow establishments to be reclassified to measure the current composition of the industry.

In the 1977 census, the industry classification of a certainty establishment was allowed to change from that assigned in 1976 under one of the following conditions:

a. The value of the 1977 primary products constituted 60 percent or more of its total value of product shipments.

b. The value of the 1977 primary products, while less than 60 percent of the total, was at least twice the value of products which had determined the 1976 industry code.

c. The value of the 1977 primary products, while not meeting either of the two above conditions, had been the largest group of products for at least two years, i.e., exceeded the value of the 1975 primary industry's products in both 1977 and 1976 by at least 20 percent.

[10] Schedule B is the U.S. export classification while TSUSA is applied to imports.

Table F. **Value Added by Manufacture for Regions, Divisions, and States: 1977**

Region, division, and State	Value added by manufacture (million dollars)	United States, total (percent)	Region, division, and State	Value added by manufacture (million dollars)	United States, total (percent)
United States[1]	585,165.6	100.0	South Region--Con.		
Northeast Region	138,746.4	23.7	South Atlantic Division--Con.

Virginia	10,882.0	1.9	Hawaii	785.5	.1

[1]Total value added differs slightly from summation of the individual States since a few establishments that could not be accurately coded to a State are included in the United States total.

5. GEOGRAPHIC CLASSIFICATION

Census divisions and regions—The 1977 Census of Manufactures measures industrial activity at the State, county, city, and standard metropolitan statistical area levels. In prior censuses, similar information was also provided for the traditional nine geographic divisions (e.g., New England, Middle Atlantic, etc.) and the four geographic regions (northeast, south, north central, and west).

The presentation of data for individual industries and industry groups at all these geographic levels has always created serious problems in protecting the confidentiality of individual company data. Consequently, it has frequently been necessary to set priorities as to what will be published (see item 21). In the past, the preference was given to publishing data for the broad geographic regions over States leading to greater suppression of industry detail at the State level. In recent years, there has been increasing interest in State information in preference to the broader regions. As a result, the 1977 Census of Manufactures gave first precedence to publishing State figures. A decision was also made to forego publication of any divisional and regional totals. This was desirable to avoid suppressing industry detail in one State that could have been published, in order to protect data for another State in the same division, that had to be suppressed to preserve the confidentiality of a respondent's figures.

Thus, some summary tables for the nine geographic divisions and four regions that were published in prior censuses do not appear in Volume III, Area Statistics, of the 1977 Census of Manufactures. (See table F for 1977 value added data for regions, divisions, and States.)

Standard metropolitan statistical areas—In addition to the data for the legally constituted geographic units (States, counties, and cities), all manufacturing totals are shown for approximately 280 SMSA's.[11] In the 1977 tables, detail for 2-, 3-, and 4-digit industries is shown for an SMSA if data for individual companies would not be disclosed, and the industry had at least 250 manufacturing employees. These are the same criteria as those used in the 1972 census. In censuses prior to 1967, detail had not been shown for SMSA's with under 40,000 total manufacturing employment, and only industry group figures were shown for SMSA's with 40,000 to 190,000 employees.

SMSA's are integrated economic and social units with a large volume of daily travel and communication between the central city (having 50,000 or more population) and outlying parts of

[11] See appendix F for a description of each SMSA.

Table G. **The 50 Largest SMSA's Ranked by Value Added by Manufacture: 1977 and 1972**

Standard metropolitan statistical area	Number of employees (thousands)	Value added by manufacture (mil. dol.)	1977 rank	1972 rank	Standard metropolitan statistical area	Number of employees (thousands)	Value added by manufacture (mil. dol.)	1977 rank	1972 rank

Kansas City, Mo.-Kans.	117.8	4,119.9	26	21					

Note: The Flint, Mich., SMSA, falls within the top 50 SMSA's but is excluded from this table to avoid disclosing figures for individual companies.

[1]Not in the top 50 SMSA's. [2]New Kent County added in 1977.

the area.[1,2] Each area (except in New England) consists of one whole county or more. An area may contain not only highly industrialized counties but also adjoining counties which, though primarily residential in character, contribute significantly to the industrial counties' labor force and are socially and economically integrated with the central city. These areas were defined by the Federal Committee on Standard Metropolitan Statistical Areas for general-purpose use in presenting economic and social data. In the New England States, similar integration criteria have been applied in defining SMSA's, but on a city and town basis, because towns are regarded as the significant unit in this region of the country.

The requirement that each SMSA consist of county units (except in New England) sometimes results in the inclusion in an area of a considerable amount of territory which would not ordinarily be considered "metropolitan," much less "industrial." It is recognized that metropolitan areas could be more accurately defined in terms of smaller area segments such as minor civil divisions, but the usefulness of areas so defined would be limited by the fact that many types of economic and social data are available only on a county basis. Periodically, the SMSA's are redefined. While some changes can be made at any time, if there are serious reasons, the major restructuring of SMSA's occur after each census of population is completed. Appendix F describes the current SMSA's and the changes since 1972.

Each SMSA is designated by the name of the principal city of the area. In addition to the name of the principal city, the areas title may include one or two additional city names.

Value added by manufacture in all SMSA's accounted for 79 percent of the U.S. total in 1977. The relative importance of the 50 largest SMSA's in 1977 and their rankings in the 1972 and 1967 censuses are shown in table G.

[1,2] Each SMSA must include either (1) a city with 50,000 or more inhabitants, or (2) a city having a population of at least 25,000 which (a) with the addition of the population of contiguous places has a population density of at least 1,000 persons per square mile; (b) constitutes, for general economic and social purposes, a single community with a combined population of at least 50,000; and (c) includes a total population of at least 75,000 in the county or counties in which the city and contiguous places are located.

Standard consolidated statistical areas (SCSA's)—In many highly urbanized areas of the country, SMSA's tend to border on one another. For some purpose, it was desirable to treat them as one geographic area and the SCSA's were developed. Each SCSA includes two or more contiguous SMSA's which meet specific criteria of size, urban character, integration, and contiguity of

urbanized areas. As with the SMSA's, the SCSA's are defined by the Federal Committee on SMSA's of the Office of Management and Budget. Their number has increased from two in the 1972 census to 13 for 1977. All manufacturing totals appear in table 4 of each State chapter. Data for 2-, 3-, and 4-digit industries with 250 manufacturing employees or more are published in table 6.

Industrial counties—In addition to industry statistics for SMSA's, table 7 of each State report presents data by county for each industry group (2- and 3-digit) and industry (4-digit) that had at least 450 manufacturing employees if it would not disclose figures reported by individual companies.

Cities with 450 manufacturing employees or more—Summary totals and industry detail at the 2-, 3-, and 4-digit levels are shown for individual cities with 450 manufacturing employees or more, provided the data do not disclose information for individual companies.

II. Methods

6. PLANNING AND PREPARATION

General—The Bureau of the Census has an obligation to meet public needs for timely and reliable information while holding costs and the burden on respondents to a minimum. During the planning stages of each economic census, the advice of trade and professional associations, Federal and State government agencies, individual companies, labor unions, and research and educational organizations is sought in an effort to reach both the users of data and the respondents who supply the basic figures. Simultaneously, the problems encountered in the previous censuses are studied, and improved methods of collection, processing, and tabulation are explored.

Mailing lists—Beginning with the 1954 economic censuses, the basic mailing lists have been obtained from IRS and SSA records. These records were also sampled to develop statistics for retail and service establishments with no employees. After the 1963 censuses, feasibility studies indicated that greater use could be made of the data in the IRS-SSA records. In the 1967 censuses, over 2,000,000 firms were exempted from the filing requirement, including 120,000 small manufacturers. Instead, census-type statistics for this group were developed from IRS-SSA records. In close cooperation with IRS and SSA, specific procedures for the use of individual tax returns that assured confidential treatment of them were developed and set forth in Executive Order No. 10911, dated January 17, 1961, and Treasury Decision No. 6547 of the same date. The records used were business income tax returns (IRS forms 1040C, 1065, 1120, and 1120S) and payroll tax returns (IRS form 941). The name and address, payrolls, and gross business receipts were obtained from these reports, in addition to the SIC industrial activity code assigned by SSA. Other census statistics for these small firms were imputed using industry average ratios of the data item to payrolls and sales.[13]

This procedure was repeated in the 1972 and 1977 economic censuses. In 1972, there was a concerted effort by the Bureau of the Census to improve the industry coding of the administrative record by mailing a nature-of-business inquiry to establishments whose industry codes could have been affected by the 1972 revision to the SIC Manual. A similar effort was made in 1977 to clarify the classification of firms which SSA had not been able to code precisely.

Content of questionnaires—As in previous censuses, the content of the 1977 questionnaires was developed in consultation with a large number of organizations and individuals, representing both the manufacturers who supply the data and those who use the statistics. Those consulted included Government agencies, individual firms, labor unions, the American Statistical Association, the American Economic Association, the American Marketing Association, the National Association of Manufacturers, and all National Manufacturers' Associations covering specific industries.

Many individual manufacturers and their trade associations were consulted about the content of the sections of the report forms dealing with the output of specific products. Drafts of the proposed 1977 product sections were circulated among 800 trade associations and about 4,000 manufacturing companies, both large and small. These draft report forms included new product detail reflecting suggestions received by the Bureau of the Census after the 1972 canvass. Small items (those valued at $7.5 million or less) were not retained in the list unless they were needed to assure correct classification of other products or were of strategic importance. A restriction was placed on proposals for additional detail; it was stipulated that the 1977 value of any new product category should exceed $20 million. The manufacturers were requested to comment specifically on the availability of the data requested in their ordinary records, and the appropriateness of the product descriptions and units of measure.

The thousands of comments and suggestions received in this clearance procedure and the decisions reached were forwarded to the Office of Federal Statistical Policy and Standards, along with the product sections developed by the Bureau of the Census as a result.

A final review was made by the Office of Federal Statistical Policy and Standards with the assistance of the Advisory Council on Federal Reports. The latter organization is a group of business executives such as controllers, economists, and market research directors, representing a cross section of all industries.

[13] As discussed elsewhere in this introduction, the amount of imputation introduced by this procedure was only about 1 percent of the overall totals.

7. REPORTING FORMS

A representative selection of the reporting forms used in the census is reproduced in appendix D. The users of each of them are discussed below.

General forms—These forms were used in the economic censuses, generally, either as companywide reports or as reports for establishments whose classification was not known precisely in advance of mailing.

NC-X1, Report of Company Organization—This companywide report was used prior to mailing the 1977 census questionnaires to develop the directory of establishments operated by multiunit companies. A more detailed account of their use is given in Section 8, The Mailing Lists.

NC-X2, Listing of Additional Establishments—This form was included with the census of manufactures forms mailed to multiestablishment companies in order to obtain a list of establishments that were acquired after the NC-X1A was filed. These additional plants were classified, added to the NC-X1A directory list, and mailed the appropriate 1977 economic censuses report forms. Plants under construction but not in operation were requested to report the value of construction put in place during 1977 and the total gross book value of assets in place at the end of the year.

NC-X3, General Schedule—This questionnaire was designed to obtain information from small companies for which the industry code available in the SSA records was not precise enough to indicate which one of the standard census questionnaires should be mailed. The information provided on form NC-X3 was used to classify these companies by industry and tabulate their data in the appropriate census.[14]

NC-X6, Administrative Offices or Auxiliary Establishments—Many multiunit companies maintain separate establishments to provide centralized administrative management, or other supporting services for other establishments of the same company, but not for the general public or other companies. They were asked to complete form NC-X6 for those establishments. The form contained questions on the approximate number of employees engaged in such functions as centralized administration, research and development, warehousing, and other auxiliary activities, and on the cost of research and development work performed by these nonmanufacturing establishments. The respondent was also asked to describe the industry activity of the operating establishments serviced by the centralized office or auxiliary unit reporting on form NC-X6.

NC-K1, Company Summary Report—Each multiunit company with 250 employees or more received a form NC-K1, Company Summary Report, in addition to a specific questionnaire for each establishment. The NC-K1 requested consolidated company totals for receipts, new capital expenditures, inventories, and fixed assets, which are published as part of the Bureau of the Census' Enterprise Statistics Program described in section I.

Census of manufactures forms—The questionnaire reproduced in the appendix, form MC-36B, is typical of the approximately 200 forms used for operating manufacturing establishments. Each of these forms was designed to be used for a specific group of industries. Since it is desirable to retain comparability in the annual survey of manufactures for establishments reporting in the sample, form MA-100 was substituted as the front sheet of the census form (e.g., MC-36B) to collect the information common to all industries. Whether or not form MA-100 was used, the inquiries on the 200 forms were identical except for the detailed questions on products shipped, materials used, and miscellaneous topics such as operations performed, equipment used, and delivery of products.

Short forms—Some industries include a large number of small- to medium-sized firms that account for a significant portion of the industry's output. Usually, these firms are not so small that the limited data in the administrative record files would meet the needs of the census. To obtain sufficient data, yet hold the reporting burden down for these smaller firms, special abbreviated short forms were designed. They obtain the key input and output statistics without the detail requested on the standard forms. A sample form is included in appendix D.

Annual survey of manufactures forms—Form MA-100 is the establishment report used in the ASM since 1949 (with modifications). The establishment's 1976 data were imprinted on the report form before mailing, thus aiding the respondent in following the instructions for the census. Item 11-A, "value of products shipped and other receipts," on form MA-100, corresponds to item 18 on the census forms such as MC-36B.

In years between censuses, the ASM collects data for broad classes of products; whereas, every 5 years, in the census, item 18 calls for information or individual product shipments.

Other related forms—Form CB-50F, Census of Distributive Trades Electrical Goods, which is reproduced in appendix D, is typical of the several forms used for wholesale establishments in the census of business. Some manufacturers operate their own wholesale establishments which the Bureau of the Census classifies as "manufacturers' sales branches and sales offices." The wholesale forms differed only in the kinds of products sold as listed in item 10. Item 18 provides the information needed to classify the establishment as a sales branch or sales office.

MC-171, Department of Defense Establishments, and MC-D4, Penal Institutions—These forms were used to collect information on government-owned and government-operated manufacturing establishments. They were used for two types of establishments:

[14] The use of form NC-X3 is also discussed in item B, Mailing Lists.

a. Manufacturing facilities owned and operated by the Department of Defense.
b. Prison industries (Federal, District of Columbia, and State).

The data were prepared with the cooperation of the Department of Defense, the Department of Justice, and the District of Columbia and State prison systems. For Department of Defense installations, information was provided on employment, worker-hours, payrolls, cost, and value of work done, by industry group and by State. For prison industries, however, only product data were requested. The data are presented in a special report included in volume I and are not included in the totals for operating manufacturing establishments.

8. MAILING LISTS

General—As discussed in item 6, the list of respondents for 1977 was obtained from IRS-SSA records. Since the IRS-SSA lists consist essentially of the names and addresses of companies rather than establishments,[15] it was necessary to follow separate procedures for multiunit companies (those operating at more than one location).

The precanvass—Multiunit companies were required to file at least one establishment report[16] covering each location. In order to mail the appropriate questionnaires, it was necessary to determine the type of activity at each location operated by multiestablishment companies. The Bureau of the Census has conducted an annual update of its directory of establishments operated by large companies in which Report of Company Organization (form NC-X1)[17] is mailed each year to multiunit companies.

All of these forms consist of a report on company affiliation and a list of the domestic establishments operated by the company. The company's establishments as identified in census records are prelisted and the respondents are asked to correct this list. They are also asked to describe new establishments not prelisted and indicate their approximate size.

Large multiunit companies are segregated for special handling because of possible overlaps and duplication. Many of these companies are active in retail and wholesale trade as well as in manufacturing. The reporting instructions are reviewed in discussions with officials of the accounting departments of many of these firms to make certain that the procedure is understood and the establishments are properly described on form NC-X1.

Single-unit companies—The mailing lists for single-unit companies (those operating at only one location) were developed from an initial control file assembled from IRS and SSA records. Out-of-scope companies (those whose activities were not to be surveyed in the economic censuses) and those identified as multiunits in the multiunit directory were removed. A special survey of out-of-scope companies with more than 50 employees was conducted, in some industries, to make certain they should not be included in the census. Some names were added to the mailing list as a result. Single units with over 150 employees were mailed form NC-X1 to determine if they were multiunits.

The final step was to identify the small companies which were not to be mailed because census-type statistics were to be developed from administrative records. The remaining records constituted the mailing lists for single-unit companies.

General schedule—While these lists generally contained adequate industry information to determine the proper form for mailing, a number of the records did not have precise industry information associated with them. Form NC-X3, General Schedule, which is reproduced in appendix D was mailed to these companies. Since it was assumed that these companies were quite small, only a few key figures were requested. The completed reports were coded and included in the tabulations. If form NC-X3 indicated that the company was actually large, it was later requested to file one or more of the appropriate standard questionnaires.

9. COVERAGE AND ACCURACY

Since the list of companies obtained from IRS and SSA records was considered to be complete, no field coverage check was conducted. The precanvass and other special procedures for multiunit companies described in item 8, Mailing Lists, and item 11, Data Collection, were designed to secure complete lists of establishments; thereby simplifying the IRS-SSA company list. Control totals, in terms of employment and payrolls of multiunit companies, were also used to verify the completeness of establishment coverage.

It was possible to compare statistics tabulated from the census of manufactures with the Bureau of the Census' Current Industrial Reports Series, or with data originating with other agencies and, thus provide a further confirmation of completeness and accuracy. These figures range from employment and wage totals compiled by the Bureau of Labor Statistics to detailed commodity output figures published by the IRS, the Fish and Wildlife Service, and the Department of Agriculture. In this volume, differences between the census of manufactures and other statistics are explained wherever possible. Census of manufactures comparability with broad measures such as national income, new capital expenditures, and production indexes are discussed elsewhere in this introduction. The Bureau of the Census' other procedures designed to improve the accuracy of the census data are discussed above in the items on data collection and processing.

[15] The SSA records for multiunit companies identify "reporting units," which in many instances correspond to census establishments. The differences are such, however, that it was found necessary to obtain up-to-date lists of establishments as described in this section. Also, the Bureau of the Census concept of a company differs from the IRS-SSA definition, since the census company includes all establishments under common ownership or control. In the IRS-SSA records, subsidiary corporations are often treated as independent companies.

[16] If two or more distinct lines of activity were carried on at one location, separate reports were obtained under some circumstances. (For a complete discussion, see "Establishment Basis of Reporting" in section 4.)

[17] This form is reproduced in appendix D.

A discussion of the valuation of intracompany shipments by multiunit companies is included in item 15.

10. GEOGRAPHIC CODING

Accurate and complete information on the physical location of each establishment is required in order to tabulate the census data by standard metropolitan statistical areas, counties, and cities. As in previous censuses, the post office address and ZIP code of the establishment were not always accepted as defining the physical location, but respondents were required to describe the actual location in terms of street address; city, town, or village; county; and State. For establishments located in rural territory, the name or number of the nearest highway was requested and the distance from the nearest town or other urban place.

In censuses prior to 1963, clerks assigned geographic code numbers to each establishment based on the description furnished by the respondent. This process was slow and required careful verification. Beginning with 1963, a computerized system was developed which assigned an area code number and a prefix symbol to the mailing address before the questionnaires were mailed. The prefix symbol indicated whether or not the mailing address was clearly acceptable as describing the physical location. If there was any question about its acceptability, the respondent's description was later carefully reviewed after the questionnaire was received. The assignment of tentative code numbers by the computer was based on extensive reference files containing nearly a million business names and addresses.

11. DATA COLLECTION

Although the greater use of administrative records in 1977 substantially reduced the number of companies canvassed directly, there remained nearly 2 million which were required to file, including about 205,000 manufacturers. Small manufacturers, for whom the administrative records sufficed, numbered about 145,000. The assembly of several hundred different questionnaires into mailing packages correctly labeled and coded, combined with the correct instruction booklets, was an extensive operation.

Most of the 1977 questionnaires were mailed by mid-January 1978 with a due date of February 15. The collection phase was completed by late July 1978.

Companies which did not return their questionnaires by the due date had to be reminded that their returns were overdue. In all, there were five routine followups. Telephone calls were made to the large companies to help with reporting problems and to request that the forms be completed and returned.

Estimates based on data from administrative records were included in the census tabulations for the relatively small number which had not responded by the closeout date in July 1978. Thus, reported or estimated data for all companies and establishments in the original mailing list (except those determined to be inactive during 1977) were included in the final statistical results. A special effort was made to obtain actual returns from all large firms, so that the dollar volume of business represented by proxy returns was relatively very small.

12. DATA PROCESSING

General—The editing,[18] coding, and tabulation of data for the 5 million establishments represented in the 1977 economic censuses was a complicated task. Automatic data processing and other advanced techniques were used in all phases.

The questionnaires were mailed from and returned to the Bureau of the Census office at Jeffersonville, Ind., where most noncomputer (that is, clerical) processing operations were performed. The returns were screened to identify major problems that could be resolved by routine correspondence with respondents. Acceptable data were placed on a key-to-disc system, and the encoded data sent to Washington, D.C. on a high-speed transmission system. The Washington, D.C. staff handled computer operations and all operations in connection with the use of IRS and SSA records.

Preliminary screening—After they were checked in and assigned geographic codes, the questionnaires were reviewed clerically to see that they conformed to certain minimum requirements before further processing. For multiunit companies, the sum of employment and payrolls reported on its establishment questionnaires was compared with the control totals received on IRS form 941. Questionnaires received on single-unit forms were reviewed to ascertain whether they had become multiunits through merger or acquisition. Questions arising in the screening operation were resolved by writing or telephoning the respondents. Complex problems were referred to the Washington, D.C. professional staff.

Computer editing—As in the 1972 Census of Manufactures, most of the review for consistency among data items and completeness was done on the computer. Average values and tolerance limits for key operating ratios (for example, cost of materials per dollar of shipments, payroll per employee, production-worker wages per hour, etc.) played a fundamental role in the editing process. More than half of all 4-digit SIC industries had one or more data cells changed by more than 5 percent as a result of the application of these programs.

A detailed description of the step-by-step processing procedures appears in the Bureau of the Census publication, History of the 1977 Economic Census. This volume describes the procedures followed in both the centralized overall processing and in the individual censuses such as manufactures.

---

[18] In data processing, the term "editing" means the review of information collected on questionnaires or from other sources, with the objective of locating and correcting erroneous entries.

III. Comments on Statistical Measures and Tables

(Explanations and definitions of the various measures of activity for which statistics are compiled in the census of manufactures are presented in appendix A. In the following text, the limitations and other characteristics of some of these measures are discussed, the content of the statistical tables is described, and comparisons with other statistical series are presented.)

13. EMPLOYMENT AND PAYROLLS IN ADMINISTRATIVE OFFICES AND AUXILIARIES

In the industry statistics chapters, the data on employment and payrolls are limited to operating manufacturing establishments. In the summary tables and the area reports, the employment and payrolls of administrative offices and auxiliaries are included as well. The report filed for administrative offices and auxiliaries requested a description of the activity of the establishments that they serviced. However, the administrative offices and auxiliaries were coded only to the 2-digit industry group of the establishments they served, whereas the operating establishments were coded to a 4-digit manufacturing industry. In most of the tables with industry detail, the administrative offices and auxiliaries are shown as a separate industry group, but statistics for them by 2-digit industry appear in each volume in the general summary tables. As indicated in table H, the relative importance of administrative offices and auxiliaries has increased substantially in recent years because of a tendency to centralize functions formerly performed in manufacturing plants. Such functions include accounting (particularly where computerized), warehousing repair services, and miscellaneous others.

Table H. **Employment in Administrative Offices and Auxiliaries and in Operating Manufacturing Plants: 1977 and Earlier**

Census year	Employees in operating manufacturing establishments		Employees in administrative offices and auxiliaries		
	Thousands of employees	Percent change from previous census year	Thousands of employees	Percent change from previous census year	Percent of total employment[1]
1977	18,516	+2.7	1,074	+8.0	5.5
1972	18,032	-2.5	994	+19.8	5.2
1967	18,492	+14.0	830	+14.3	4.3
1963	16,235	+5.3	726	+20.6	4.3
1958	15,423	-1.4	602	[1]+32.9	3.8
1954	15,645	(NA)	453	(NA)	2.8

(NA) Not available.

[1]The apparent increase from 1954 to 1958 is believed to be somewhat overstated, because coverage of administrative offices and auxiliaries was more complete in the 1958 census.

Source: Census of Manufactures.

14. MATERIALS CONSUMED

Every establishment was requested to report the total cost of materials. In addition, quantity and cost information was collected for approximately a thousand specific materials. About 350 of these were "complete coverage" materials; i.e., every industry that consumed appreciable quantities of the material was canvassed so that the data would aggregate to at least 90 percent of manufacturing consumption. For the remaining materials, information on consumption was obtained only in those industries in which the materials were important inputs. Detailed consumption information was collected in item 17, the standard material inquiry; in item 18, the product inquiry (for items that were produced and consumed in the same plant); and in a few instances in a special inquiry. The resulting statistics are presented mainly in tables 6a and 7a of the industry statistics chapters.

Because American industry uses an enormous variety of materials, the choice of materials for which "complete coverage" consumption data (90 percent or higher) were obtained had to be strictly limited. The selection of a particular material for such coverage was based on the following criteria:

a. The importance as measured by the total value of U.S. consumption of the material.
b. The percentage of total consumption accounted for by manufacturing establishments.
c. The availability of consumption information from manufacturers' records.
d. Other factors such as the strategic importance of the material or the availability of historical data on the use of the material.

The "limited-coverage" materials were chosen, not only because they constituted important inputs for particular industries, but frequently because they provided information necessary to classify plants by SIC industry. In using the detailed data on materials consumed which appear in table 7 in the industry statistics chapters, of the following limitations should be noted:

a. Materials were reported for the establishment as a whole and no attempt was made to ascertain how much of the material was used in each of various products. Thus, the industry totals appearing in table 7 include consumption in secondary products as well as primary products

of the industry. The extent of secondary production in each industry is measured by its specialization coverage ratio shown in table 5b of the industry chapters.

b. Special attention should be paid to the codes ending in "000" and captioned "materials, parts, containers, and supplies, n.s.k." The amounts appearing on these lines are totals imputed for (1) establishments whose statistics were developed from administrative records, and (2) totals for establishments which returned report forms but failed to report their consumption in specific terms. Thus, for most industries, the data for a specific material are understated. A judgment on the statistical significance of the understatement may be made from the ratio of the value shown for the "n.s.k." (code 000) to the total of materials, components, parts, containers, and supplies for the industry.
c. Establishments consuming less than a specified amount of material were not requested to report consumption of the material separately. For the majority of individual materials, the minimum amount was $10,000. The use of this cutoff is not believed to have had a significant effect on the totals, although in 1972 a lower cutoff of $5,000 was used.
d. A total of "n.e.c." material code 970099 was collected on most forms and is published for each industry. This is the total cost of materials for an industry for which no material items were prelisted on the form. A sample survey, MA-131, 1977 Supplemental Survey of Materials Consumed, was conducted to provide material consumption estimates for the cost of materials reported in material code 970099 for selected industries. Results of this survey are shown in the subject report Selected Materials Consumed.

15. VALUE OF SHIPMENTS

Value of shipments of multiunit companies—Except for a few industries, the respondents were instructed to report net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. Multiunit companies were instructed to report for each establishment as if it were a separate economic unit and, in particular, to report interplant transfers at their full economic value. Full economic value is defined as not only the cost of production but also a reasonable proportion of company overhead and profits. Generally, there is no advertising or other selling cost assigned by companies to interplant transfers, so it would be expected that the value per unit of such transfers would be less than that for commercial sales. To assure consistency in the valuation as the interplant transfer moved though the company, the plant receiving the transferred goods was instructed to include them in its cost of materials at the same value as at the shipping point, plus the cost of freight and other handling charges.

If the goods were transferred to sales branches, or sold through separate sales offices, the "f.o.b. plant" instruction implies that the value is somewhat lower than the final invoice value, because the cost of selling (mainly the cost of operating the sales branch or office) is excluded.

However, there is reason to believe that these instructions were not followed uniformly by all companies. In a record-keeping practice study of 54 multiunit companies conducted a few years ago, it was found that about half of them had reported interplant transfers of semifinished products at commercial or market prices, which tend to be somewhat higher than the "cost plus overhead and profit" requested in the census instructions. Where finished products were transferred to separate selling organizations, half of the companies interviewed valued the products leaving the manufacturing plant at their final or invoice price, or somewhat higher than the requested "f.o.b. plant" transfer value. It appears from this study and other observations that the value of shipments of products reported by multiunit companies tends to be overstated. If it was known that a substantial amount of a product tended to be transferred to establishments of the same company, separate quantity and value figures were requested on the amount transferred and the amount sold outside the company. Data on these shipments, the unit value of which tends to be different from the unit value for shipments outside the company, are presented separately in table 6a in the industry statistics chapters.

Individual products—In the 1977 census program, information was collected on the output of approximately 13,000 individual product items.[19] A "product" as used in the census of manufactures is the finest level of detail for which output information was requested. It is not necessarily synonymous with the term "product" as used in the marketing sense. In some cases, it may be much more detailed and, in other cases, it is more aggregative. For example, there is a long list of pharmaceutical preparations but a single item for all canned meats. If detailed production figures were available from other government sources or reliable private surveys, it was not considered necessary to request extensive detail in the census.

Some 6,000 of the product items were listed separately on the 1977 census report forms. Data for the remaining 7,000 products were obtained monthly, quarterly, or annually in commodity surveys of the current industrial reports program of the Bureau of the Census. Totals for the year 1977 for these items compiled in the commodity surveys are shown in table 6a, "products shipped," in the industry statistics chapters. On the 1977 census forms, only an overall control total or "tieline" was obtained. In table 6a, both the tieline total and the total of the detail obtained in the current industrial reports are shown to indicate how closely the two surveys were reconciled.

Typically, both quantity and value of shipments were collected. However, physical quantity measures are not meaningful for some product lines, and for these, only value of shipments was collected. If a product was used to a large degree in the fabrication of other products within the same establishment in which it was produced, total quantities produced and often the quantities consumed were collected. Information on production, as well as shipments, was also collected for products for which there are significant differences between the two

[19] See 1977 Census of Manufactures MC77-R-1, Numerical List of Manufactured Products.

because of wide fluctuations in finished goods inventories. Alternate measures of output of products, such as value of work done for products with long production cycles, were used as appropriate and feasible.

Classes of products—The individual products were aggregated into classes of products which were, in turn, grouped into the primary products of each industry. In the code structure, a 7-digit number is assigned to the individual product, a 5-digit code to the class of product, and a 4-digit code to the total primary products in an industry. (See section 4 for application of coding structure to the assignment of SIC codes for establishments).

The 13,000 product items in the 1977 census (including products from the current industrial reports program) were grouped into approximately 1,500 separate product classes. General similarity was the basis for the product class combinations within each 4-digit industry, i.e., kind or use of products, the manufacturing processes, type of markets, or materials used. The economic significance of the class was also taken into account; residual products of an industry were grouped when the dollar value of the products did not warrant separate classes.

Since preserving confidentiality of the data of respondent companies is a determinant of the amount of detail that can be published, the larger number of respondents included in the product-class shipments totals permit many more cross tabulations than do the 7-digit products. In the industry statistics chapters, product classes by State appear in table 6b and by industry of the establishment producing them in table 5c. The latter table clearly shows the primary and secondary product mix of an industry, as well as the interrelationship between the 4-digit industry value of shipments and the 4-digit product group value of shipments.

It is possible to classify individual establishments not only by 4-digit industry, but also by the largest class of products they produce within that industry. Table 5a provides finer industry-type general statistics for establishments classified according to the degree to which they specialize in producing a specific class of products.

The class-of-product concept was incorporated by the Bureau of the Census into the 1947 Census of Manufactures after it developed the technique in the compilation of World War II production statistics. Product classes were used to collect product information in the first ASM conducted in 1949. The product classes tend to be redefined more frequently than the SIC on which they are based in order to keep abreast of the growth and decline of products.

Effect of use of administrative records on product data—As noted elsewhere in this Introduction, 140,000 small manufacturers were not mailed report forms and most of their detail was imputed based on limited information in IRS and SSA administrative records. All of the value of products of these small establishments were coded only to the 4-digit products of the industry in which they were classified. These product shipment are uniquely identified in table 6a. Also uniquely identified are product shipments of reporting companies which were described too generally to code below the 4-digit level. Frequently, these were residuals in the company's records which the company felt it could not further break down. Table I, summarized by 2-digit group, reflects the importance of these "n.s.k." product shipments. Except in a few industries, they tend to be moderate in size—except in lumber, furniture, and printing (SIC 24, 25, and 27). The "n.s.k." of the respondents tends to be larger than that of the administrative records.

One factor tends to reduce the value of products, n.s.k., attributed to administrative record companies that affects table I, particularly. In some 4-digit industries, there is only one product category (an example is Industry 3273, Ready-Mixed Concrete). Administrative-record estimates for these products were treated as specific information and not tabulated as "n.s.k." headings.

In using the data for the specific 7-digit products shown in table 6a, the importance of the "n.s.k." has to be considered. The shipments of individual products tend to be understated somewhat in proportion to the size of the "n.s.k." Census-to-census comparison of 7-digit products should be made with caution if there has been a significant increase or decrease in the importance of the n.s.k.

16. DUPLICATION IN COST OF MATERIALS AND VALUE OF SHIPMENTS

The aggregates of the cost of materials and value of shipments figures for industry groups, and for all manufacturing industries, include large amounts of duplication since the products of some industries are used as materials by others. With some important exceptions, such as SIC 3312, Blast Furnaces and Steel Mills, this duplication is not significant within individual 4-digit industries. However, it is significant at the 2- and 3-digit industry levels because these group totals often include industries which are successive stages in the production of a finished manufactured product. Examples are the addition of flour mills to bakeries in the total value of shipments of SIC major group 20 and the addition of pulpmills to papermills in group 26. Economists have estimated that the value of manufactured products exclusive of such duplication—the value of finished manufactures—tends to approximate two-thirds of the total value of shipments reported in the census of manufactures.

Because the amount of duplication of the cost of materials in the value of products figures cannot be measured with any degree of precision, caution is urged with the use of the value of shipments totals at the 2- and 3-digit industry group levels.

Even where there is no significant amount of duplication within an industry group, value of shipments figures are not the best measures of the relative economic importance of individual manufacturing industries or geographic areas. There are wide variations in the ratio of materials, labor, and other processing costs to value of shipments; both among industries and within the same industry. The manufacturing process contributes only a small amount to the sales value of some products; but a large amount to the final value of others. Value added by manufacture is a better measure of the net contribution of an industry to the Nation's overall output.

Table I. **Value of Products, Not Specified by Kind: 1977 and 1972**

Product group code	Total value of product shipments (mil. dol.)		Products not specified by kind											
			Total (mil. dol.)		Large companies (mil. dol.)		Small companies (mil. dol.)		Percent attributed to--					
									Total		Large companies		Small companies	
	1977	1972	1977	1972	1977	1972	1977	1972	1977	1972	1977	1972	1977	1972

37	161,607.6	91,522.0	1,999.9	1,413.5	1,084.9	1,126.8	915.0	286.7	1.2	1.5	.7	1.2	.6	.3
38	26,949.1	14,484.8	1,277.4	556.1	662.6	413.8	614.8	142.3	4.7	3.9	2.5	2.9	2.3	1.0
39	17,254.1	11,270.0	2,373.3	1,521.7	1,600.1	903.2	773.2	618.5	13.8	13.5	9.3	8.0	4.5	5.5

Note: These values are product shipments, irrespective of the industry in which the products were made and exclusive of miscellaneous receipts, and, therefore, differ from the industry group totals shown in the general summary tables. However, products primary to more than one product group are classified based on the industry in which they were made. Data for some product groups may differ slightly from the data collected in order to avoid disclosing operations of individual companies which have previously been withheld from the tables 6a of the 1977 and 1972 Censuses of Manufactures Industry Series.

17. VALUE ADDED BY MANUFACTURE

General—The first step in the calculation of value added is the conversion of the value of shipments (including resales and miscellaneous receipts) to value of production by adding the ending inventory of finished foods and work in process inventories and subtracting the beginning inventory. The cost of materials (including materials, supplies, fuel, electric energy, cost of resales, and cost of contract work) is then subtracted from this value of production to obtain value added.[20]

Value added avoids the duplication in the value of shipments figure which results from the inclusion of the shipments of establishments producing materials and components, along with the shipments of establishments producing finished products. It does not exclude the cost of services purchased from other business firms, as does the concept of value added, used in the national income accounts.[21] Nevertheless, it is considered to be the best value measure available in census data for comparing the relative economic importance of manufacturing among industries and geographic areas.

Gross national product, national income, and value added—The national income accounts provide two measures of national output or value added originating in manufacturing: (1) gross national product (GNP), or, more precisely, gross domestic product (GDP),[22] and (2) national income without capital consumption adjustment. These two measures are statistically different and neither is completely comparable to census value added.

GDP originating in manufacturing is the net value of the output of goods and services produced in the U.S. at market prices before deductions for depreciation charges and capital consumption allowances. It differs, in part, from the census value added since it includes indirect business taxes (e.g., sales, excise, and property). Excise and sales taxes are excluded from the f.o.b. census value of shipments and, thus, from census value added. Property taxes are part of the cost of doing business included in census value added, since only the cost of materials is deducted from f.o.b. shipments. A greater difference between GDP and census value added rests in the exclusion of purchased business services from GDP, but not from census value added. Both GDP and census value added include the basic factor costs of production—labor costs, property costs including depreciation, and profits. Depreciation in the two series is calculated differently, however. The census collects depreciation as carried on the books of the establishment.Thus, it tends to be the depreciation

[20] For a few industries (for example, ship building) where value of work done is substituted for value of shipments, no adjustment is made for change in inventories. In a few other industries where value of production is collected, the inventory adjustment is made only on the basis of change in work-in-process inventories.

[21] Collection of data on the cost of purchased business services at the plant level presents many problems. Advertising by multiunit companies, for example, is frequently charged at the company level and the cost either not allocated to plants or, if allocated, are only included as part of a broader company overhead category. National income data, on the other hand, are compiled, in part, from company rather than plant data, such as the IRS Statistics of Income in which advertising is presented as a separate cost item based on company reports.

[22] Gross national product is the market value of goods and services producted by labor and property supplied by *Residents* of the United States. Gross domestic product is the goods and services attributable to labor and property *located within* the United States.

charged against the original purchase price of the plant or equipment on a tax return basis. In calculating GDP, these tax return allowances are adjusted to account for the economic service lives, straight-line depreciation, and replacement cost.

In compiling the national accounts, it is necessary to rely on two different sources of data: (1) establishment-based data similar to the census for labor income, and (2) company-based data for profit and other company level income and cost charges. In estimating the GDP for manufacturing, the property-type incomes, interest, depreciation, and profit have been reestimated to an establishment basis by the Bureau of Economic Analysis (BEA). Thus, conceptually, both the GDP and value added tend to be on a comparable establishment-industry basis.

In the national accounts, 2-digit detailed statistics within manufacturing are compiled only on a national income basis, without the capital consumption adjustment. National income differs from GDP by the exclusion of indirect business taxes and capital consumption allowances, but before the capital consumption adjustment. Unlike GDP, it remains a mixture of establishment-based data and company-based data for profits and company-type costs. This results in the inclusion in national income of the net value added created by nonmanufacturing establishments of companies primarily engaged in manufacturing, but the exclusion of value added created by manufacturing plants of primarily nonmanufacturing companies. It is thought that this tends to raise the national income attributed to manufacturing. This effect can be seen in the petroleum and coal products industry group where nonmanufacturing activities are so significant that national income exceeds value added (see tables J and K).

Table K provides a year by year comparison of GDP and national income to value added. GDP tends to be 10 to 20 percent lower. In recent years, there are some erratic variations in these relationships. In part, this is thought to be the result of the different treatment of the change in inventory that is used in the two series. The census inventory figures are book value inventories and, thus, a mixture of last-in-first-out (LIFO) and first-in-first-out (FIFO) and other historic accounting methods. In the national income accounts, these inventories are converted to current prices comparable to the prices used to value the GDP, and, thus, the change in inventories is on a current-priced value consistent with sales. Significant differences occur in the change in book value and currently-priced inventories in years of rapidly changing prices. The magnitude of these differences can be partially judged by the size of the inventory valuation adjustment used by BEA (see table L).

Reconciliation of GDP and value added—In recent years, the census and the annual survey of manufactures have been obtaining data on some of the residual costs included in census value added. As a result, it is possible to reconcile in more detail the differences between GDP and value added in manufacturing. In table M, the census value added, at $585.2 billion, exceeded GDP at $462.4 billion. When indirect business taxes (other than property taxes) are deducted from GDP, it drops to $444.0 billion, or $141.2 billion less than census value added. The labor components of the two series are reasonably close, although not identical. Census depreciation, on a book value basis, however,

[1]Source: Revised estimates of gross domestic product by major industries, Survey of Current Business, July 1978, p. 28; National Income and Product Accounts.

[2]In comparing gross domestic product and national income originating in manufacturing with value added, the role of change in inventories must be recognized. Census value added is value of shipments less the cost of materials adjusted for the change in book value inventories (finished goods and work in process in most industries.) Gross domestic product and national income originating in manufacture include the change in business inventories as part of gross private domestic investment. In the National Income Accounts, the book value change in inventories is adjusted for change in prices to convert it to prices similar to those used to measure the value of output. This adjustment is referred to as the inventory valuation adjustment. In periods of significant inflation, such as 1974, this adjustment can be substantial and create a slower year-to-year growth in gross domestic product originating than in value added in manufacturing, so there is a drop in gross domestic product and national income originating as a percent of value added in manufacturing. In periods of stable prices, the movements of the two inventory series usually are similar.

[3]Value added for 1947 and earlier years is unadjusted.

Table L. **Change in Manufacturing Inventories: 1977**

(Billion dollars)

Item	Value
Change in book value inventories (census)	$13.4
Inventory valuation adjustment	-8.4
Change in inventories (gross national product)	5.0

Note: In calculating gross national product, the Bureau of Economic Analysis uses the change in total inventories. In compiling value added, the Bureau of the Census typically uses finished goods and work in process inventories only. In 1977, these inventories were $9.3 billion compared with total inventories of $13.4 billion.

Source: U.S. Department of Commerce, Bureau of Economic Analysis.

is less than the GDP capital consumption allowance, adjusted for economic service lives, straight-line depreciation, and replacement cost. Census book-value depreciation was $26.7 billion, the adjusted GNP capital consumption allowance, $40.0 billion. After measurable labor costs and depreciation were deducted, unexplained census value was $231.4 billion compared with an explained GNP of $81.4 billion. Census has not been able to measure all the remaining components of value added, especially those parts which are company-type charges and profits. In 1977, information was collected on rentals and cost of communication services, and maintenance and repair purchased from other companies, a total of $22.4 billion, leaving the unexplained portion of value added at $209.0 billion. If the GDP estimates of $9.9 billion for property taxes and $71.4 billion for profits and interest payments are applied to this, there is a final unexplained portion of value added amounting to $127.7 billion.

This residual is attributable to company overhead other than central office payroll, e.g., company-level depreciation, business taxes, and purchased services (advertising, legal, accounting, and other professional services, patents, royalties, etc., not readily measurable separately at the plants).

18. CAPITAL EXPENDITURES AND GROSS ASSETS

Capital expenditures—The manufacturers were instructed to report expenditures of the type chargeable to fixed assets

Table M. COMPARATIVE STATISTICS ON CENSUS VALUE ADDED AND GROSS DOMESTIC PRODUCT: 1977

(Billion dollars)

Item	Census value added	GDP
Total	–	462.4
Less: Indirect tax (except property) business and not subsidies[1]	–	18.4
Equals	[1]585.2	444.0
Less: Compensation of employees total	327.1	322.6
Census payrolls of operating plants	242.0	–
Census payroll supplements of operating plants	49.9	–
Census payrolls of central offices and auxiliaries	[2]22.0	–
Census payrolls of sales branches offices	[2]13.2	–
Equals	258.1	121.4
Less. Additional cost measured by census of manufactures	49.1	40.0
a. Included in GDP: Capital consump. allowance[3]	26.7	40.0
b. Excluded from GDP	22.4	–
Purchased communication service	3.6	–
Purchased maintenance and repairs	11.9	–
Rental payments, building and equipment	6.9	–
Equals: Residual costs included in census value added	209.0	81.4
Less: Costs or incomes assumed to be equal to those measured in GDP	93.6	81.3
Property tax	9.9	9.9
Interest and profit type income	71.4	71.4
Difference between census book value depreciation and GDP depreciation[3]	12.3	–
Equals: Remaining costs in value added (company overhead, other than payrolls included above: e.g., company-level depreciations, business taxes, and services purchased by company or directly by plants (advertising, legal, accounting, and other professional services; communications, patent fees, royalties, travel costs, etc.)	115.4	(.1)

[1] Census measures value of shipments exclusive of sales and excise taxes. Property taxes are a cost included in value added.

[2] There is strong evidence that most companies include the payroll of administrative offices and auxiliaries and all sales offices in setting the f.o.b. value of shipments from their manufacturing plants. Those costs are, thus, included in value added. Many companies also indicate that they include the cost of sales branches, although this may not be universally true (see "value of shipments" in text).

accounts, for which depreciation reserves are normally maintained. Actual capital outlays during the year were requested, not the final value of equipment put in place or structures completed during the year.

The Bureau of the Census estimates of capital expenditures tend to be lower than those published by BEA in its quarterly survey of expenditures for plant and equipment. In addition to normal sampling variation, a major source of difference rests in the scope of the two series. Census data relate only to manufacturing establishments.

The BEA series relating to manufacturing includes all establishments of manufacturing companies, nonmanufacturing as well as manufacturing, but excludes manufacturing establishments of companies that they have classified as chiefly nonmanufacturing. This difference in the two series is particularly important in the petroleum industry where company expenditures for developing new wells and new distribution facilities are ordinarily much larger than their capital expenditures at refineries. The BEA and Census data for recent years are shown in tables N and O.

Table N. Expenditures for New Plant and Equipment—BEA Series and Census: 1977 and Earlier Years

(Billion dollars)

Year	BEA-series[1]	Census (census of manufactures and ASM)[2]	Column B divided by column A
	(A)	(B)	(C)
1977	69.2	47.5	.69
1976	59.9	40.5	.68
1975	54.9	37.3	.68
1974	53.2	35.7	.67
1973	42.4	27.0	.64
1972	35.4	24.1	.69
1971	33.6	20.9	.62
1970	37.0	22.2	.60
1969	36.3	22.3	.61
1968	32.3	20.6	.64
1967	32.3	21.5	.67

1960	16.4	10.0	.61
1959	13.8	9.3	.67
1958	13.0	9.6	.74
1954	12.0	8.2	.68
1947	8.7	[2]6.0	.69

[1] Source, U.S. Department of Commerce, Survey of Current Business, October 1980.

[2] Excludes data for establishments under construction but not yet in operation.

[3] Capital consumption allowances in GDP and depreciation as collected in the census are not completely comparable. Depreciation reported in the census is that carried on the books of the establishment and is charged against the original purchase cost of the assets. In the GNP accounts, a "capital consumption adjustment" is made to place the depreciation more on a replacement cost basis. Specifically, it is "the tax-return-based capital consumption allowances, less capital consumption allowances, that are based on estimates of economic service lives, straight-line depreciation, and replacement cost."

[1]Source: U.S. Department of Commerce, Survey of Current Business, October 1980.

Gross value of fixed assets—In addition to reporting capital expenditures during the year, the manufacturers were requested to report the original cost value of fixed assets (structures and machinery and equipment) in place at the end of the year, along with depreciation and retirements during the year. This series, however, is based on reports filed in the ASM sample. It is conceptually comparable with the capital expenditures data. As the census capital expenditures series differs from the BEA series, so the census gross assets series will differ from similar series based on company level reports, i.e., those appearing in the IRS Statistics of Income and the FTC Quarterly Financial Report of Corporations. Since the census assets series is also based on sample estimates from the ASM, it is subject to a sampling error. (See appendix A for more complete definitions of terms.)

19. INVENTORIES

The value of end-of-year inventories held by each manufacturing establishment was obtained for each year. Separate information was requested for—

a. Finished goods,
b. Work-in-process, and
c. Materials, supplies, fuel, and other inventories.

A measure of the changes in inventories from the beginning to the end of each year is essential to the conversion of value of shipments during the year to value of production, and, therefore, to the calculation of value added. The ratios of inventories to shipments at different times are also used in analysis of trends and business-cycle movements. For the best use of all of these measures, the inventories should be valued in the same prices as the shipments. Census inventory statistics have some limitations in these uses.

The inventories, as collected currently and in the past, have been the inventories as carried in the books of each respondent. In aggregating those inventories and calculating inventory changes, census procedures make no adjustments for the different methods of inventory valuation used by the respondents. Change in inventories and the relationship of inventories to shipments can vary significantly depending on whether last-in first-out (LIFO) or some historical method such as first-in first-out (FIFO) is used. These differences can become very significant in periods of rapid- and large-price changes. In recent years, the Bureau of the Census has been obtaining information on the preparation of inventories valued by the different accounting methods, both in its monthly surveys and the annual survey of manufactures. Some results have been published in the monthly Manufacturers' Shipments, Inventories, and Orders survey but none for the ASM. Considerable difficulty has been encountered in obtaining results of publication quality because of the complexity of the accounting at the establishment level and corporate level in large companies. Unofficial results have been made available to BEA to assist them in their adjustment of book value inventories to current and constant prices for use in the national income accounts. Some of the anomalies in the census value added and the national income originating in manufactures are due to the different treatment of inventory change in the two series.

In using inventory data by stage of fabrication for all industries at the industry level, it should be noted that an item treated as a finished product by an establishment in one industry may be reported as a raw material by another establishment in a different industry. For example, the finished-product inventories of a steel mill would be reported as raw materials by a stamping plant. Such differences are present in the inventory figures by stage of fabrication shown for individual industries, industry groups, and all manufacturing which are merely aggregates of figures reported by establishments in specified industries.

For a few industries in the food group, there are special problems in the handling of inventories by stage of fabrication. These are industries in which the products are aged. Included among such types of products are stemmed and dried tobacco, cheese, and whiskey. It is not clear whether such products should be treated as finished-goods inventories or as work in process while in storage. In all these industries, substantial finished goods inventroies have been reported. These data have been summarized in the inventory tables in a consistent manner for all of the years included in this report.

20. PLANT SPECIALIZATION

As discussed in item 4 above, the primary products of a plant are those which determine its industry classification; all other products are referred to as secondary products. The value of a plant's primary products in comparison to its total production is referred to as its degree of specialization. For each plant, two measures of specialization were computed:

a. A 4-digit primary product-specialization ratio, which is the sum of the values of all the plant's primary products divided by the sum of all its primary and secondary products.

b. A 5-digit primary product-class specialization ratio, which is the sum of the largest 5-digit product-class value divided by the sum of its primary and secondary products (the miscellaneous receipts of the establishment were not included in these calculations). For example, assume that an establishment reported the following:

Total value of shipments and other receipts	$1,000
Miscellaneous receipts (resales, etc.)	15
Total value of products shipped	985
32731, Concrete pipe products	100
32722, Precast concrete products	785
32730, Ready-mixed concrete	100

This plant would be coded into Industry 3272, Concrete Products, with a primary product specialization ratio of 90 percent ($885 ÷ 985); it would be subclassified into the 5-digit Class 32722, Precast Concrete, with a primary product class specialization ratio of 80 percent ($785 ÷ 985).

21. CONFIDENTIALITY

The Bureau of the Census is prohibited by law from publishing any statistics that disclose information reported by individual companies. In suppressing figures to avoid disclosing information of individual companies, individual States are given precedence over geographic regions and divisions. This is an innovation for 1977, since in prior censuses the larger geographic areas were given precedence. As a result of this change in philosophy, it has become more difficult to produce industry detail for the larger geographic areas and data for the these areas are no longer published. States are given precedence over standard metropolitan statistical areas; standard metropolitan statistical areas over counties; and counties over cities.

In tables showing industry detail, major industry group (2-digit) totals take precedence over industry group (3-digit) totals which, in turn, take precedence over individual (4-digit) industries. Similarly, in product tables, 4-digit product groupings take precedence over 5-digit product classes and the latter over individual 7-digit products.

Such order of precedence was used because:

a. It was considered preferable to show State data for an industry, even at the cost of withholding data for a region. In recent years, there seemed to be more need for and use of data for individual States than for the larger regions—especially since many regional development programs encompassed clusters of States different from the standard regions and divisions.
b. By giving preference to industry-group statistics over individual industries within each State, the extent to which individual States can be compared within the SIC industry classification framework is greatly increased.

22. MICROFICHE AND COMPUTER TAPES

Data in many tables in the census volumes are available on microfiche and on computer tape.

One major data series, the Location of Manufacturing Plants, will be available only on computer tape. This series presents the number of establishments by employment size class by 4-digit SIC industry codes for States, counties, and places of 2,500 inhabitants or more. These data are available for both State and county by industry and State and place by industry.

Microfiche reports and computer tapes are sold by Customer Services (Microfiche/Tapes), Data User Services Division, Bureau of the Census, Washington, D.C. 20233.

23. SPECIAL TABULATIONS

Special tabulations of data collected in the 1977 Census of Manufactures may be obtained on computer tape or in tabular form. The data will be in summary form and subject to the same rules prohibiting disclosure of confidential information (including name, address, kind of business, or other data for individual business establishments or companies) as are the regular publications.

Special tabulations are prepared on a cost basis. A request for a cost estimate as well as exact specifications on the type and format of the data to be provided, should be directed to the Chief, Industry Division, Bureau of the Census, Washington, D.C. 20233.

24. ABBREVIATIONS

The following abbreviations and symbols occur frequently in text, tables, and footnotes:

—	Zero
(X)	Not applicable
(NA)	Not available
(D)	Withheld to avoid disclosing operations of individual companies
n.e.c	Not elsewhere classified
n.s.k.	Not specified by kind
(S)	Suppressed
(Z)	Less than one half of unit of measure shown
lin.	Linear
equiv.	Equivalent
hp	Horsepower
kWh	Kilowatt-hours
SIC	Standard Industrial Classification
IRS	Internal Revenue Service
SSA	Social Security Administration
ASM	Annual Survey of Manufactures
CIR	Current Industrial Reports
BEA	Bureau of Economic Analysis
SEC	Securities and Exchange Commission
GNP	Gross National Product

Other abbreviations, such as lb, gal, yd, doz, and bbl, are used in the customary sense. Where the term "tons" only is used, it refers to short tons of 2,000 pounds; where the figures are expressed in tons of 2,240 pounds, the unit of measure is specified as "long tons" or "gross tons."

Data in this publication may differ slightly from the industry and area reports previously published. These differences are due to corrections which were made for minor errors identified after the industry and area reports were issued. This report reflects these corrections.

USERS' GUIDE IN LOCATING STATISTICS BY TABLE NUMBER IN THE INDUSTRY CHAPTERS

(For explanation of terms, see appendix A)

	Item	4-digit industry statistics		
		Historical	Operating ratios	By geographic area

1. Statistics for All Manufacturing Establishments Including Administrative Offices and Auxiliaries: 1977 and Earlier Years 3
2. Operating Ratios for All Manufacturing Establishments Including Administrative Offices and Auxiliaries: 1977 and Earlier Years 5
3. Selected Statistics by Major Industry Group and Industry: 1977 and 1972 6
4. Selected Statistics for Major Industry Groups by Employment Size of Establishment: 1977 . . . 22
5. Selected Statistics for Administrative Offices and Auxiliaries by Major Industry Group of Establishments Serviced: 1977 27
6. Employment Statistics for Operating Manufacturing Establishments and Administrative Offices and Auxiliaries by Major Industry Group: 1977 and Prior Census Years 28
7. Statistics for Operating Manufacturing Establishments by Major Industry Group: 1963 to 1977 . 30
8. Summary Statistics by Major Industry Group: 1977 35
9. Gross Book Value of Depreciable Assets, Capital Expenditures, Retirements, Depreciation Charges, and Rental Payments for Buildings and Machinery by Major Industry Group: 1977 . . . 37
10. Cost of Purchased Services by Major Industry Group: 1977 38

Table 1. **Statistics for All Manufacturing Establishments Including Administrative Offices and Auxiliaries: 1977 and Earlier Years**

Year	All establishments		All employees[1]		Production workers			Value added by manufacture[3] (million dollars)	Value of industry shipments (million dollars)	New capital expenditures[4] (million dollars)	Index of industrial[5] production (1977=100)
	Total (number)	With 20 employees or more (number)	Number[2] (1,000)	Payroll (million dollars)	Number[2] (1,000)	Hours (million)	Wages (million dollars)				
1977	359,928	118,699	19,590.1	264,013.1	13,691.0	26,686.7	157,163.7	585,165.6	1,358,526.4	47,459.0	100.0
1976[6]	(NA)	(NA)	18,753.0	233,388.7	13,052.0	25,354.2	137,565.4	511,471.1	1,185,695.3	40,669.9	94.5

(NA) Not available.

[1]The figures for 1939 to 1977 include data for employees at manufacturing establishments who were engaged in distribution and in construction work. The extent to which data for such employees were included in the figures for earlier years is not known. In addition to the employment and payroll for operating manufacturing establishments, manufacturing companies reported separately for administrative offices or auxiliary units (e.g., research laboratories, storage warehouses, power plants, garages, repair shops, etc.) that service the manufacturing establishment(s) of a company. These data are included in the total employment, payroll, and establishment figures for the years 1949 to 1977.

[2]The method of compiling these figures varied, as follows: All employees: For 1955 to 1977, figures represent the average of the number of production workers for the payroll period ended nearest the 12th of March, May, August, and November, plus all other employees for the payroll period ended nearest the 12th of March; for 1949 to 1954, they represent an average of all employees for the payroll period ended nearest the 12th of March, May, August, and November; for 1947, an average of 12 monthly figures for all employees; and for 1939 and prior years, the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1949 to 1977, figures are based on employment for the payroll period ended nearest the 12th of March, May, August, and November; and for 1947 and prior years, they represent the average of 12 monthly figures.

[3]For the period 1954 to 1977, value added by manufacture represents adjusted value added, and for earlier years, unadjusted value added. Unadjusted value added is obtained by substracting the cost of materials, supplies and containers, fuel, purchased electric energy, and contract work from the value of shipments for products manufactured plus receipts for services rendered. Adjusted value added also takes into account (a) value added by merchandising operations (that is, the difference between the sales value and cost of merchandise sold without further manufacture, processing, or assembly), plus (b) the net change in finished goods for work-in-process inventories between the beginning and end of the year. For 1849 to 1933, cost of contract work was not subtracted from value of shipments in calculating value added by manufacture.

[4]The figures for 1951 to 1977 include expenditures for plants under construction and not yet in operation. This information was not collected prior to 1951.

Footnotes are continued on next page.

[5]Source: Board of Governors, Federal Reserve System.

[6]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[7]The 1958 and subsequent years figures include establishments classified in Industry 3273, Ready-Mixed Concrete, and establishments classified in Industry 3599, Machinery, Except Electrical, N.E.C., that were engaged exclusively or almost exclusively in machine shop repair work. The data for such establishments are excluded from the figures for the period 1939 to 1957, but are included for 1929 and earlier years. The 1954 to 1966 figures include data for establishments engaged in the processing and distribution of fluid milk, Industry 202, Dairy Products. These establishments were not included in the figures for earlier census years. In addition, beginning with 1954, the figures include data for Industry 2411, Logging Camps and Logging Contractors, which were not included within the scope of the 1947 census. There were also a number of changes in the definition of manufacturing industries during earlier census years that affect the comparability of the historical series. Among the more important of these were the following: Figures for 1935 and later years exclude data for railroad repair shops and manufactured gas, which were included in 1899 to 1933 figures; the minimum size of establishment included for 1947 to 1966 was one employee; for 1921 to 1939, manufacturing establishments reporting value of shipments of $5,000 or more were within scope; whereas, for 1919 and earlier years, the cutoff was $500. (These changes in procedure have not appreciably affected the comparability of the historical data except for the figures on number of establishments.)

[8]The figures for 1939, but not for earlier years, have been revised on the basis of retabulation of the returns to exclude data for establishments classified as manufacturing in 1939 and prior years but classified as nonmanufacturing beginning with 1947. Value added by manufacture for 1939, prior to revision and on a basis comparable with 1937 and previous year, was $24.7 billion.

[9]The 1939 figures for all employees were revised on the basis of estimates rather than by retabulation of the 1939 reports. The estimates were made in the following manner: For the number of employees, by multiplying the retabulated figure for number of production workers by the ratio of all employees to production workers computed from the unrevised 1939 statistics; for salaries and wages, by multiplying the retabulated wage figure by the ratio for salaries and wages also derived from the unrevised 1939 statistics.

[10]Not including data for salaried officers of corporations and their salaries and, therefore, not strictly comparable with figures for other years.

[11]These figures for 1899 and earlier years represent hand and neighborhood manufacturing operations.

Table 2. **Operating Ratios for All Manufacturing Establishments Including Administrative Offices and Auxiliaries: 1977 and Earlier Years**

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

Note: 1977 and 1972 payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. (X) Not applicable.

[1]The total value of shipments for industry groups (2- and 3-digit) and a few individual industries (4-digit) includes extensive duplication arising from shipments between establishments in the same industry classification.

[2]Establishments in this industry reported value of production instead of value of shipments. Consequently, the formula for computing value added by manufacture was modified to exclude any change in finished product inventories between the beginning and end of the year.

[3]Value added data include government-owned, contractor-operated plants which were estimated based upon averages reported for commercial establishments in prior years. Cost of materials data exclude government-owned materials furnished to government-owned, contractor-operated plants and include fuel and electricity purchased by or for the establishments. Value of shipments data include a calculated value of shipments for government-owned, contractor-operated plants comprised of adjusted value added plus the cost of fuels and electric energy. New capital expenditures include expenditures for plants under construction but not in operation. Capital expenditures of government-owned, contractor-operated plants are excluded from the totals for the industry.

[4]Includes expenditures for plants in operation and for plants under construction but not yet in operation.

[5]Government-owned, privately-operated establishments did not enter into the calculation of "primary product specialization ratio" or "coverage ratio" as all other dollar receipts for these establishments were included in "miscellaneous receipts."

[6]Minumum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[7]The value of shipments and cost of materials for this industry include substantial duplication; therefore, the specialization ratios and coverage ratios were not calculated.

[8]Relationships are not meaningful because of the predominance of receipts for contract and commission work on materials owned by others. Such receipts are treated as primary products for this industry.

[9]Establishments in this industry were requested to report value of work done instead of value of shipments. Consequently, the formula for computing value added by manufacture was not adjusted for any inventory change between the beginning and end of the year.

[10]In 1977 and 1972, in addition to the employment and payroll reported for operating manufacturing establishments, manufacturing concerns reported separately for administrative offices or auxiliary units which serve the manufacturing establishments of a company (e.g., storage warehouses, power plants, research laboratories, garages, repair shops, etc.) rather than the general public. Separate reports were obtained if these units were at different general locations from the establishments served or if they serviced more than one manufacturing establishment. The figures shown for these units do not represent a separate industry but rather a balancing total for all manufacturing industries.

Table 4. Selected Statistics for Major Industry Groups by Employment Size of Establishment: 1977

Item	All establishments (no.)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)	End-of-year inventories (million dollars)
		Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

Note: Data for administrative offices and auxiliary operations are excluded from this table.

(D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1--10 to 19 percent; E2--20 to 29 percent; E3--30 to 39 percent; E4--40 to 49 percent; E5--50 to 59 percent; E5--50 to 59 percent; E6--60 to 69 percent; E7--70 to 79 percent; E8--80 to 89 percent; E9--90 to 99 percent; E0--100 percent.

[2]Data are also included in respective size classes shown.

(Z) Less than 50 employees.

[1]Detailed establishment data exceed totals since some establishments participate in more than one activity.

[2]Total payroll data for each industry group are actual. Detail data are estimates based on reported employment and average annual salaries determined from data collected in the 1977 Enterprise Statistics series.

Table 6. **Employment Statistics for Operating Manufacturing Establishments and Administrative Offices and Auxiliaries by Major Industry Group: 1977 and Prior Census Years**

1977 code	Major industry group and year	All establishments		Operating manufacturing establishments		Administrative offices and auxiliaries	
		Employees (1,000)	Payroll (million dollars)	Employees (1,000)	Payroll (million dollars)	Employees (1,000)	Payroll (million dollars)

[1]Includes administrative offices and auxiliaries.

[2]Aggregate of cost of materials and value of shipments for industry groups and for all manufacturing industries includes extensive duplication, since products of some industries are used as materials by others.

Table 9. Gross Book Value of Depreciable Assets, Capital Expenditures, Retirements, Depreciation Charges, and Rental Payments for Buildings and Machinery by Major Industry Group: 1977

Item description	Total (million dollars)	Buildings and other structures (million dollars)	Machinery and equipment (million dollars)	Standard error of estimate for total (percent)

Note: Expenditures data, shown in table 3a, are census universe figures and may differ from ASM sample estimates shown in this table. Table 3b figures represent best estimate of year-to-year change as measured by continuing ASM sample, but are subject to sampling errors. Hence, as estimates of level, they are not as reliable as universe figures. For a description of the standard error of estimate, see the section "Qualifications of data" in appendix B.

Table 10. Cost of Purchased Services by Major Industry Group: 1977

Code	Industry group	Repair of buildings			Repair of machinery			Communication services		
		Cost (million dollars)	Response coverage ratio (percent)	Standard error of estimate (percent)	Cost (million dollars)	Response coverage ratio (percent)	Standard error of estimate (percent)	Cost (million dollars)	Response coverage ratio (percent)	Standard error of estimate (percent)

TABLES

INDUSTRY STATISTICS

1a. Historical Statistics: 1977 and Earlier Years 5
1b. Selected Operating Ratios: 1977 and Earlier Years. 6
2. Geographic Area: 1977 and 1972 7
3a. Summary Statistics: 1977 10
3b. Supplemental Statistics Based on Sample Estimates: 1977. 11
4. Employment Size of Establishment: 1977 12
5a. Industry and Primary Product Class Specialization: 1977 13

PRODUCT STATISTICS

5b. Industry-Product Analysis—Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967 15
5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977. 16
6a. Products and Product Classes—Quantity and Value of Production by All Producers: 1977 and 1972. 18
6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972 30
6c. Product Classes—Value Shipped by All Producers: 1963, 1967, 1972 to 1977. 32

MATERIAL STATISTICS

7. Materials Consumed by Kind: 1977 and 1972. 33

DESCRIPTION OF INDUSTRIES

ENGINES AND TURBINES AND FARM MACHINERY AND EQUIPMENT

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code	Title
3511	Turbines and Turbine Generator Sets
3519	Internal Combustion Engines, N.E.C.
3523	Farm Machinery and Equipment
3524	Lawn and Garden Equipment

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 Supplement.

INDUSTRY 3511, TURBINES AND TURBINE GENERATOR SETS

This industry comprises establishments primarily engaged in the manufacture of steam turbines; hydraulic turbines; gas turbines, except aircraft; and complete steam, gas, and hydraulic turbine generator set units. Establishments primarily engaged in building or rebuilding locomotives are classified in industry 3743, and those manufacturing nonautomotive type generators which are not part of a turbine generator set are classified in industry 3621.

The products of this industry frequently take more than a year to manufacture. Therefore, value of shipments data may not accurately reflect the manufacturing activity for a given year. Shipments data may fluctuate considerably from year to year relative to material and labor input. For this reason, value added by manufacture may be more significant for measuring industry trends.

For a detailed list of products of industry 3511, refer to table 6a, product codes 35111 01 to 35112 81.

The total value of shipments for establishments classified in the Turbines and Turbine Generator Sets industry amounted to $2,734 million in 1977, an increase of 25 percent from 1972. The value of shipments of products classified as primary to the industry was $2,813 million, an increase of 35 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) Value added by manufacture, at $1,556 million in 1977, was 27 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 40.9 thousand employees, a decrease of 11 percent from 1972. The leading States in employment were New York, Pennsylvania, Massachusetts, and California, accounting for 77 percent of the industry's 1977 employment. Data for these States have been withheld to avoid disclosing operations of individual companies, however, employment size ranges are provided.

Single-unit establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3519, INTERNAL COMBUSTION ENGINES, N.E.C.

This industry comprises establishments primarily engaged in the manufacture of diesel, semi-diesel, or other internal combustion engines, not elsewhere classified, for stationary, marine, traction, and other uses. Establishments primarily engaged in the manufacture of aircraft engines are classified in industry 3724; automotive engines, except diesel, in industry 3714; engine generator sets in industry 3621; and guided missile and space vehicle propulsion units in industry 3764. For a detailed list of products of industry 3519 refer to table 6a, product codes 35191 00 to 35199 19.

The total value of shipments for establishments specified in the Internal Combustion Engines, N.E.C. industry amounted to $7,697 million in 1977, an increase of 132 percent over 1972. The value of shipments of products classified as primary to the industry was $7,548 million, an increase of 125 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a

significant portion of this change were diesel, semi-diesel, and dual fuel engines, including automotive, for which shipments increased 135 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $3,407 million in 1977, was 103 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 88.8 thousand employees, an increase of 27 percent from 1972. The leading States in employment were Wisconsin, Illinois, Indiana, and Michigan, accounting for 72 percent of the industry's 1977 employment. Data for Wisconsin, Illinois, and Indiana have been withheld to avoid disclosing operations of individual companies; however, employment size ranges are provided.

The 1977 census obtained data on shipments of most types of internal combustion engines only at broad product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of selected internal combustion engines are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-35L, Internal Combustion Engines. Some of these data are also shown in table 6a.

Single-unit establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3523, FARM MACHINERY AND EQUIPMENT

This industry comprises establishments primarily engaged in the manufacture of farm machinery and equipment, including wheel tractors, for use in the preparation and maintenance of the soil; planting and harvesting of the crop; preparation of crops for market, on the farm; or for use in performing other farm operations and processes; and in the manufacture of commercial turf and grounds care equipment. Establishments primarily engaged in the manufacture of industrial trucks, tractors, and trailers used for handling materials in industrial plants, depots, and docks are classified in industry 3537; contractors' off-highway tractors in industry 3531; farm hand tools in group 342; and garden tractors, lawn mowers, and other lawn and garden equipment in industry 3524. For a detailed list of products of industry 3523, refer to table 6a, product codes 35231 00 to 3523B 31.

The total value of shipments for establishments specified in the Farm Machinery and Equipment industry amounted to $10,282 million in 1977, an increase of 127 percent from 1972. The value of shipments of products classified as primary to the industry was $9,549 million, an increase of 130 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were wheel tractors and attachments, (except contractors' off-highway type, lawn and garden tractors, and motor tillers), for which shipments increased 117 percent, and harvesting machinery, which showed a 152 percent increase in shipments. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $4,855 million in 1977, was 116 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 131.3 thousand employees, an increase of 26 percent from 1972. The leading States in employment were Iowa, Illinois, Nebraska, and Kansas, accounting for 47 percent of the industry's 1977 employment. Data for Iowa, Nebraska, and Kansas have been withheld to avoid disclosing operations of individual companies; however, employment size ranges are provided.

The 1977 census obtained data on shipments of most farm equipment only at broad product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of farm equipment are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-35A, Farm Machinery and Equipment. These data are also shown in table 6a.

Single-unit establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 4 percent of total value of shipments.

INDUSTRY 3524, LAWN AND GARDEN EQUIPMENT

This industry comprises establishments primarily engaged in the manufacture of lawn mowers, garden tractors, and other lawn and garden equipment used for home lawn and garden care. Establishments primarily engaged in the manufacture of farm machinery are classified in industry 3523; hand lawn and garden shears and pruners in industry 3421; and other garden hand tools in industry 3423. For a detailed list of products of industry 3524, refer to table 6a, product codes 35241 01 to 35245 19.

The total value of shipments for establishments specified in the Lawn and Garden Equipment industry amounted to $1,570 million in 1977, an increase of 48 percent from 1972. The value of shipments of products classified as primary to the industry was $1,747 million, an increase of 53 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were power push-type lawn mowers for which shipments increased 40 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $632 million in 1977, was 39 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 19.5 thousand employees, an a

decrease of 6 percent from 1972. The leading States in employment were Wisconsin, Mississippi, North Carolina, and Illinois, accounting for 49 percent fo the industry's 1977 employment. Data for North Carolina have been withheld to avoid disclosing operations of individual companies; however, employment size ranges are provided.

Single-unit establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified.
(S) Withheld because estimate did not meet publication standards. (X) Not collected. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1] In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2] For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3] Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4] Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5] Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6] Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7] Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8] Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

(For explanation of terms, see appendix A)

Year	Payroll per employee (dol.)	Assets per employee (dol.)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not collected. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1--10 to 19 percent; E2--20 to 29 percent; E3--30 to 39 percent; E4--40 to 49 percent; E5--50 to 59 percent; E6--60 to 69 percent; E7--70 to 79 percent; E8--80 to 89 percent; E9--90 to 99 percent; E0--100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA--150 to 249 employees; BB--250 to 499 employees; CC--500 to 999 employees; EE--1,000 to 2,499 employees; FF--2,500 employees or more.

Voluntary costs	107.1	1	257.7	1	348.8	1	27.7	3
Gross value of depreciable assets:								
Buildings and other structures:								
Beginning of year	307.8	1	620.4	1	636.2	2	100.2	2
New capital expenditures	5.7	4	38.5	2	70.5	7	5.3	10
Used capital expenditures	0.4	1	(5.5)	35	(4.2)	22	(2.0)	39
Retirements	2.1	1	2.7	3	11.0	6	2.1	13
End of year	311.8	1	661.7	1	699.9	2	105.4	2
Machinery and equipment:								
Beginning of year	868.7	1	1,485.3	1	1,380.6	2	192.5	2
New capital expenditures	39.7	2	245.4	1	268.4	2	24.2	4
Automobiles, trucks, etc., for highway use[3]	(0.3)	(A)	(3.6)	(A)	(7.6)	(A)	(0.5)	(A)
Computers and peripheral data processing equipment[3]	(1.5)	(A)	(3.7)	(A)	(8.3)	(A)	(0.5)	(A)
All other[3]	(36.4)	55	236.4	8	239.3	8	(21.3)	94
New machinery and equipment, n.s.k.[4]	(1.5)	(A)	(1.7)	(A)	(13.2)	(A)	(1.9)	(A)
Used capital expenditures	1.5	1	(10.0)	26	11.4	13	1.7	9
Retirements	12.3	1	37.0	2	65.1	5	10.6	8
End of year	897.6	1	1,703.7	1	1,595.3	1	207.8	2
Total gross value of depreciable assets:								
Beginning of year	1,176.5	1	2,105.7	1	2,016.7	1	292.7	2
New capital expenditures	45.4	2	284.0	1	338.9	3	29.5	3
Used capital expenditures	1.9	1	(15.5)	29	(15.6)	15	(3.6)	22
Retirements	14.4	1	39.7	2	76.1	5	12.6	9
End of year	1,209.4	1	2,365.4	1	2,295.1	1	313.2	2
Depreciation charges during 1977	73.6	1	149.4	1	151.3	2	22.5	2
Buildings and other structures	12.1	1	23.8	1	27.2	3	4.8	3
Machinery and equipment	61.6	1	125.6	1	124.1	2	17.7	2

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error, and hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

(For explanation of terms, see appendix A)

Industry and employment size class[1]	All establishments (no.) Covered by administrative records[2] E0	29	.1	1.5	.1	.2	1.0	3.6	5.6	9.1	.2	2.2

(D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1--1- to 19 percent; E2--20 to 29 percent; E3--30 to 39 percent; E4--40 to 49 percent; E5--50 to 59 percent; E6--60 to 69 percent; E7--70 to 79 percent; E8--80 to 89 percent; E9--90 to 99 percent; E0--100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied to other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

(Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary; excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A)

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not collected. (Z) Less than 50 thousand dollars or hours; under 50 employees.

Table 5b. Industry-Product Analysis — Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. Extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

[1] Data are not available because industry was created in 1972.

Table 5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977

(Millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of the industries included in this chapter are shown. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made in industries not included in this chapter, the value of such shipments is shown in the "All other industries" column. The specified "All other industries" are listed at the end of the table if they account for more than $5 million of the products primary to this chapter. For explanation of terms, see appendix A)

Table 5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977—Con.

(Millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of the industries included in this chapter are shown. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made in industries not included in this chapter, the value of such shipments is shown in the "All other industries" column. The specified "All other industries" are listed at the end of the table if they account for more than $5 million of the products primary to this chapter. For explanation of terms, see appendix A)

35232 --	Farm dairy machines, sprayers and dusters, farm elevators, and farm blowers:						
	As reported in the census of manufactures	.....	95	(X)	306.4	(X)	157.8
	As reported in Current Industrial Reports MA-35A, Farm Machinery and Equipment	.....	(X)	(X)	315.4	(X)	12 152.5
	Farm dairy machines	.....	(X)	(X)	73.2	(X)	47.0
	Mechanical installations:						
35232 03	Vacuum pumping outfits for milking machines with or without motors and/or reserve tanks	Number	(X)	10,704	8.1	14,043	5.6
35232 04	Milking machines, complete (suspended and floor type bucket, single and double units)		(X)	2,216	.3	6,173	.7
35232 08	Pipeline milking units, complete, including claws, shells, inflations, air tubes, with or without pulsator	Number	(X)	58,926	17.6	51,706	14.5
35232 15	Other farm dairy machines and equipment	.....	(X)	(X)	47.1	(X)	9.0
35232 16	Attachments	.....	(X)			(X)	17.2
	Sprayers and dusters	.....	(X)	(X)	130.3	(X)	53.9
	Power sprayers, field and row crop types only:						
35232 18	Self-propelled	Number	(X)	2,941	34.6	1,906	5.2
	Tractor mounted:						
35232 20	Piston pump type, all types of mounted tank		(X)	5,614	3.5	3,448	1.1
	Nonpiston pump type:						
35232 22	Rear-mounted tank		(X)	6,597	3.0	8,972	3.0
35232 23	Other than rear-mounted tank		(X)	5,017	2.3	7,622	2.0
	Other than tractor mounted:						
	Piston pump type:						
	Power-take-off driven:						
35232 24	Over 4 and under 11 gallons per minute		(X)	1,138	1.2	719	1.0
35232 25	11 gallons per minute and over		(X)	655	1.6		
	Engine driven:						
35232 26	Over 4 and under 11 gallons per minute		(X)	1,714	2.1	1,002	.6
35232 27	11 gallons per minute and over		(X)	742	1.8	72	.2
35232 28	Nonpiston pump type		(X)	7,108	3.4	1,563	.9
35232 29	Other power sprayers, over 4 gallons per minute		(X)	2,141	1.6	(X)	(13)
	Power sprayers, other than field and row crop types (over 4 gallons per minute):						
35232 31	Power-take-off driven		(X)	2,026	2.8	1,353	.4
35232 32	Engine driven		(X)	3,357	3.6	1,342	2.2
	Power sprayers, air-carried type (field, row crop, and orchard types):						
35232 33	Complete units		(X)	7,662	10.8	7,994	7.4
35232 34	Attachment type	Number	(X)			91	(Z)

See footnotes at end of table.

Table 6a. Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972 – Con.

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation see appendix A, Value of shipments)

1977 product code	Product	Unit of measure	1977			1972	
			Number of companies with shipments of $100,000 or more	Product shipments[1]		Product shipments	
				Quantity[2]	Value (million dollars)	Quantity	Value (million dollars)
3523- --	FARM MACHINERY AND EQUIPMENT--Con.						
35232 --	Farm dairy machines, sprayers and dusters, farm elevators, and farm blowers--Con.						
	As reported in Current Industrial Reports MA-35A, Farm Machinery and Equipment--Con.						
	Sprayers and dusters--Con.						
	Foggers and mist sprayers, portable:						
35232 35	Foggers (thermal), under 16 gallons-per-hour output	Number	(X)	111,213	5.1	14,073	.9
35232 36	Mist sprayers (nonthermal), under 16 gallons-per-hour output		(X)			45,769	1.9
	Hand-pulled and garden type, 4 gallons-per-minute output and under:						
35232 37	16-gallon tank capacity and under		(X)	4,135	.8	(X)	([13])
35232 38	Over 16-gallon tank capacity		(X)	3,235	.8		
	Hand sprayers, agricultural:						
35232 39	Under 1 gallon		(X)	2,278,795	2.4	3,195,539	2.2
	1 gallon and over:						
35232 41	Compressed air or gas		(X)	2,719,833	31.6	1,787,382	13.7
35232 42	Knapsack (liquid pump)		(X)	28,684	1.2	37,609	.8
35232 43	Hose-end and flame sprayers		(X)	1,184,587	2.7	1,149,223	2.1
35232 48	Sprayer pumps (bucket, barrel, slide, etc.)		(X)	49,086	.4	(X)	([13])
35232 52	Power dusters, all types		(X)	875	1.3	1,565	.3
	Hand dusters:						
35232 53	Crank or knapsack		(X)	372,038	1.1	(S)	.5
35232 54	Plunger		(X)				
35232 55	Other	Number	(X)				
35232 56	All other sprayers	.....	(X)	(X)	8.0	(X)	[13]6.1
35232 57	Attachments for sprayers and dusters	.....	(X)	(X)	2.6	(X)	1.2
	Farm elevator and blowers	.....	(X)	(X)	111.9	(X)	[12]51.6
	Farm elevators, portable:						
35232 60	Single chain	Number	(X)	5,004	1.8	13,741	2.5
35232 63	Double chain		(X)	7,174	7.2	14,748	7.1
	Auger type:						
35232 64	Under 6-inch diameter		(X)	40,668	4.8	40,620	2.1
35232 65	6-inch diameter		(X)	73,628	20.1	56,019	7.9
35232 66	Over 6-inch diameter		(X)	58,382	28.5	34,386	8.8
35232 73	Other farm elevators, including stationary		(X)	10,270	19.4	16,863	19.3
35232 74	Other farm blowers, including forage blowers, and combination grain and forage blowers	Number	(X)	10,348	15.3		
35232 75	Attachments for farm elevators and blowers	.....	(X)	(X)	14.9	(X)	[12]3.9
35233 --	Planting, seeding, and fertilizing machinery:						
	As reported in the census of manufactures	.....	100	(X)	466.5	(X)	172.0
	As reported in Current Industrial Reports MA-35A, Farm Machinery and Equipment	.....	(X)	(X)	479.4	(X)	166.7
	Corn planters, corn and cotton planters, and lister planters (number of rows):						
	Pull type:						
35233 16	Under 6 rows	Number	(X)	183,089	140.0	34,224	27.2
35233 18	6 rows and over		(X)				
35233 22	Mounted planters, total rows mounted		(X)				
35233 40	Transplanters, pull type or mounted and broadcast seeders, end-gate mounted and drawn		(X)	30,250	8.5		
	Fertilizer distributors, pull type or mounted:						
	Dry, including lime spreaders:						
35233 50	Gravity distribution (5 feet and over)		(X)	2,898	3.6	5,861	2.2
	Centrifugal distribution:						
35233 55	Pull type		(X)	5,765	16.5	5,747	9.3
35233 56	Mounted		(X)	2,783	10.5	1,643	3.6
35233 52	Liquid		(X)	6,619	20.6	5,714	6.4
35233 54	Anhydrous ammonia		(X)	6,562	13.0	7,320	7.5
35233 57	Manure spreaders, conveyor type		(X)	16,688	33.4	[14]21,233	[14]21.6
35233 65	Manure spreaders, tank type, open and closed		(X)	7,853	23.0	7,728	17.3
35233 69	Manure pumps, liquid		(X)	1,093	2.6	([14])	([14])
35233 70	Front and rear mounted loaders (farm type), manure and general utility	Number	(X)	27,661	41.4	21,100	16.8
35233 77	Row crop unit planters	No. of rows	(X)	41,424	13.5	45,600	9.3
35233 82	Other planting, seeding, and fertilizing machinery	.....	(X)	(X)	107.9	(X)	[14]28.1
35233 84	Attachments	.....	(X)	(X)	45.0	(X)	17.4

Table 6a. Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972 — Con.

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation see appendix A, Value of shipments)

1977 product code	Product	Unit of measure	1977			1972	
			Number of companies with shipments of $100,000 or more	Product shipments[1]		Product shipments	
				Quantity[2]	Value (million dollars)	Quantity	Value (million dollars)
3523- --	FARM MACHINERY AND EQUIPMENT--Con.						
35234 --	Harrows, rollers, pulverizers, stalk cutters, and similar equipment:						
	As reported in the census of manufactures	.....	95	(X)	392.2	(X)	191.8
	As reported in Current Industrial Reports MA-35A, Farm Machinery and Equipment	.....	(X)	(X)	406.4	(X)	172.9
35234 03	Spike-tooth, spring-tooth, and tine-tooth harrow sections	Number	(X)	103,260	12.5	90,797	7.2
	Disc harrows:						
35234 13	Single (2-gang)		(X)	3,110	1.0	4,578	1.5
	Tandem:						
35234 14	Pull type		(X)	53,104	167.1	53,802	52.7
35234 09	Mounted		(X)	29,221	12.1	22,458	5.8
35234 23	Offset, all		(X)	11,215	39.2	11,030	18.4
35234 15	Combination rollers and harrow mulchers		(X)	8,619	17.4	10,130	6.0
	Stalk shredders and cutters or rotary mowers (power-take-off):						
	Flail type (without spout):						
35234 16	Under 90-inch cutting width		(X)	10,139	4.4	14,255	4.3
35234 17	90-inch cutting width and over		(X)	2,270	5.3	2,719	3.4
	Horizontal blade type:						
35234 18	66-inch cutting width and under		(X)	53,245	25.4	67,884	20.8
35234 19	Over 66-inch up to 100-inch cutting width		(X)	20,018	16.5	23,954	12.5
35234 20	Over 100-inch cutting width		(X)	6,690	16.3	4,292	6.4
	Blade terracers or scrapers (farm size):						
35234 29	Rear mounted blade type		(X)	69,867	9.5	69,951	4.9
35234 21	Other, including wheel type		(X)	24,031	13.6	32,711	8.0
35234 24	Land levelers	Number	(X)	5,389	10.8	5,464	3.1
35234 25	Other harrows, rollers, and packers	.....	(X)	80,808	38.5	(X)	9.5
35234 27	Attachments	.....	(X)	(X)	16.8	(X)	8.3
35235 --	Harvesting machinery, except hay and straw harvesting:						
	As reported in the census of manufactures	.....	85	(X)	1,463.3	(X)	580.4
	As reported in Current Industrial Reports MA-35A, Farm Machinery and Equipment	.....	(X)	(X)	1,428.4	(X)	543.6
35235 11	Combines (harvester-threshers), except peanut combines	Number	(X)	31,943	720.7	21,172	220.6
35235 21	Grain heads for combines, all sizes		(X)	45,892	95.8	38,052	26.3
35235 31	Corn heads, all sizes		(X)	24,035	126.8	20,642	64.4
35235 32	Windrowers or swathers (draper type for grain)		(X)	601	2.3	984	3.5
35235 42	Corn pickers		(X)	(15)	(15)	7,577	18.3
35235 53	Potato harvesters		(X)	1,005	14.1	628	6.8
35235 56	Beet harvesters, all row sizes		(X)	556	5.8	792	4.4
35235 57	Peanut diggers, shakers, and windrowers		(X)	2,517	4.1	2,594	2.7
35235 59	Peanut combines		(X)	1,790	11.7	2,218	9.3
	Field forage harvesters:						
35235 63	Shear bar, self-propelled type and pull type (basic machines)		(X)	14,573	78.9	15,597	42.1
	Attachments for shear-bar type forage harvesters:						
35235 64	Pick-up hay units and cutter-bar hay unit		(X)	9,126	9.1	11,728	6.7
35235 65	Row-crop unit, all sizes		(X)	14,687	23.3	16,183	14.0
35235 70	Flail type (horizontal knives or vertical free-swinging knives or hammers), including discharge spouts		(X)	4,167	9.2	4,651	6.1
35235 77	Cotton strippers, all types	Number	(X)	1,816	24.5	2,266	7.3
35235 82	Other harvesting machinery, including picker-shellers, field shelling attachments for corn pickers, cotton pickers, and potato diggers	.....	(X)	15 11,801	15 191.3	(X)	77.5
35235 83	Attachments for harvesting machinery, including platform and seeder, reel, straw spreaders, load levelers, weed stripper, grate-unit knife grinders, and stalk walkers	.....	(X)	(X)	111.1	(X)	33.6
35236 --	Haying machinery:						
	As reported in the census of manufactures	.....	38	(X)	414.9	(X)	184.1
	As reported in Current Industrial Reports MA-35A, Farm Machinery and Equipment	.....	(X)	(X)	405.0	(X)	175.5
35236 13	Mowers, cutter-bar type, excluding combination mower-conditioners, all types	Number	(X)	13,962	7.7	16 18,346	16 6.9
35236 18	Mower-conditioners (combination type) self-propelled and pull type		(X)	27,517	101.9	21,204	43.3
35236 23	Windrowers, self-propelled with conditioner, auger and draper type		(X)	6,003	54.4	8,464	25.0
35236 31	Rakes, side delivery, cylinder type and finger wheel type		(X)	20,328	19.0	14,126	7.8
	Hay balers:						
35236 53	Hay balers, all types, bales under 200 pounds		(X)	24,876	82.6	27,989	57.1
35236	Hay balers, all types, bales 200 pounds and over		(X)	17,745	81.7		
35236 59	Hay stackers		(X)	1,037	7.8	(16)	(16)
35236 64	Bale throwing attachments for hay balers		(X)	7,237	5.1	8,161	3.4
35236 65	Hay-bale loaders (field type)		(X)	4,136	2.8	3,215	1.2
35236 82	Other haying machinery	Number	(X)	135,334	42.1	16 16,630	16 27.7
35236 83	Other attachments for haying machinery (stripper, bale chute, and knife attachments)	.....	(X)			(X)	3.1

35238 19	Tool bars, pull type or mounted	Number.....	(X)	8,639	4.6	13,510	2.0
35238 23	Other cultivators and weeders	.....	(X)	[19] 46,372	[19] 20.8	(X)	[20] 12.0
35238 22	Attachments for cultivators and weeders (front mounting frame, disc weeders, rear section, and drawbars)	.....	(X)	(X)	17.9	(X)	5.1
	Machines for preparing crops for market or for use	.....	(X)	(X)	296.9	(X)	106.0
	Feed grinders and crushers, power:						
35238 24	Hammer mills, with hammers only (farm size)	Number.....	(X)	1,330	.9	1,219	.6
35238 30	Burr mills, with grinding plates only, combination roughage mills, and roller mills (farm size)		(X)	5,178	4.4	3,872	3.1
35238 27	Feed mixers (farm size), stationary and portable		(X)	2,885	17.2	1,017	3.1
35238 29	Combination grinder-mixers, stationary and portable (farm size)		(X)	12,393	42.0	20,661	35.7
35238 33	Tobacco curers		(X)	4,315	11.1	7,404	5.3
	Driers (grain, hay, and seed):						
	Heated air crop driers:						
	Batch type:						
35238 34	Power-take-off operated		(X)	1,609	7.2	4,511	13.0
35238 35	Electric motor operated	Number.....	(X)	8,764	15.1		

See footnotes at end of table.

Table 6a. Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972 — Con.

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation see appendix A, Value of shipments)

1977 product code	Product	Unit of measure	1977			1972	
			Number of companies with shipments of $100,000 or more	Product shipments[1]		Product shipments	
				Quantity[2]	Value (million dollars)	Quantity	Value (million dollars)
3523- --	FARM MACHINERY AND EQUIPMENT--Con.						
35238 --	Farm machinery and equipment, n.e.c., excluding parts but including cultivators, weeders, feed grinders, and crushers, poultry, hog, and barnyard equipment, farm wagons, self-propelled irrigation systems, etc., except commercial turf equipment--Con.						
	As reported in Current Industrial Reports MA-35A, Farm Machinery and Equipment--Con.						
	Machines for preparing crops for market or for use--Con.						
	Driers (grain, hay, and seed)--Con.						
	Heated air crop driers--Con.						
35238 36	Continuous-flow type	Number	(X)	4,362	50.7	1,520	9.4
35238 43	Heated-air units		(X)	26,692	19.5	10,966	5.6
	Crop drying fans (over 15,000 c.f.m. at approximately 1-inch pressure):						
35238 37	24-inch diameter and under		(X)	43,637	10.3	7,653	2.5
35238 38	Over 24-inch diameter	Number	(X)	2,031	1.9	319	.2
35238 40	Other machines for preparing crops for market or for use		(X)	152,510	106.2	(X)	[21]24.2
35238 41	Attachments for machines for preparing crops for market or for use		(X)	(X)	10.4	(X)	3.4
	Farm poultry equipment		(X)	(X)	120.8	(X)	59.8
	Incubators:						
35238 45	Chicken egg incubators	Egg capacity in thousands.	(X)	55,075	12.2	20,051	3.7
35238 46	All other incubators for all types of eggs except chicken, but including turkey, regardless of capacity	Egg capacity in thousands.	(X)	1,900	.8	2,558	.6
	Brooders, floor and hanging:						
35238 48	Gas (5,000 b.t.u. or more open flame, infrared and catalytic)	Number	(X)	81,248	3.0	110,466	3.4
35238 49	Other (electric, oil, coal, and wood)	Number	(X)			36,927	.1
35238 51	Brooders, battery (starting and growing)	No. of decks	(X)	6,698	.2	9.0	.2
	Nests and cages:						
35238 52	Hole and colony cages	Total linear footage.	(X)	1,606,820	3.6	421,154	.8
35238 53	Standard laying cages		(X)	5,114,886	17.1	2,186,363	4.7
35238 54	Laying cages mechanized for feeding and/or egg gathering		(X)			(S)	5.8
	Poultry feeders, except turkey feeders:						
35238 55	Trough, except mechanical	Total linear footage.	(X)	4,757,833	2.9	(S)	.8
35238 56	Hanging	Number	(X)	212,860	.6	143,818	.3
	Mechanical:						
35238 57	Floor type	Total linear footage of conveyor.	(X)	7,465,385	14.8	2,326,211	7.1
35238 59	Cage type	Total linear footage of conveyor.	(X)	26,795,492	15.7	3,025,237	4.1
	Poultry waterers, except turkey waterers:						
35238 62	Trough (chicken type) and automatic fountains	Number	(X)	782,144	3.3	(S)	4.3
35238 63	All other waterers		(X)	9,443,251	5.1	(S)	2.4
35238 64	Turkey waterers		(X)	76,549	.2	34,403	.1
35238 66	Egg washers		(X)	380	4.2	262	1.6
35238 65	Egg graders, mechanized		(X)	(X)	34.0	117	.4
35238 69	Other farm poultry equipment	Number	(X)			(X)	18.0
35238 68	Attachments for farm poultry equipment		(X)	(X)	2.9	(X)	1.3
	Other barn and barnyard equipment		(X)	(X)	167.8	(X)	101.0
	Cattle and dairy barn equipment:						
	Feeding equipment:						
	Silo unloaders, forage and grain:						
	Tower unloaders, including sealed storage:						
35238 71	Top discharge	Number	(X)	21,045	34.9	18,353	26.2
35238 72	Bottom discharge with chain conveyor		(X)	4,854	18.0		
35238 73	Bottom discharge with auger conveyor		(X)			2,555	2.8
35238 75	Electric-powered bunk feeders		(X)	11,394	14.3	12,756	10.1
35238 76	Calf feeder, hopper type		(X)	6,364	1.1	35,687	4.2
35238 77	Cattle feeder, hopper type		(X)	6,817	2.3	10,568	2.2
35238 86	Liquid feeder tanks, self-feeder type		(X)	9,424	1.2	(X)	[22]
	Handling equipment:						
35238 70	Dairy, barn, and gutter cleaners		(X)	9,445	24.7	7,215	10.5
35238 78	Dairy cattle stall for use with stanchions		(X)	32,877	1.7	46,353	1.2
35238 79	Chain tie stalls, all types		(X)	49,039	2.2	51,473	1.1
35238 80	Dairy free stalls for loose housing barns, new	Number	(X)	77,447	1.6	129,964	1.3
35238 82	Pens	Feet	(X)	205,129	1.4	199,997	1.0
35238 83	Milking parlor stalls (tandem, abreast type)	Number	(X)	17,854	4.9	32,198	4.7
35238 84	Stanchions, swing type (shipped separately and with stalls)	Number	(X)	83,331	1.2	68,037	.7

See footnotes at end of table.

Table 6a. **Products and Product Clases — Quantity and Value of Shipments by All Producers: 1977 and 1972** – Con.

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. 35238 92	Attachments for barn and barnyard equipment		(X)	(X)	2.0	(X)	.5
	Self-propelled irrigation systems		(X)	(X)	268.9	(X)	[17]44.3
35238 93	Center-pivot system	Ten-tower equivalents.	(X)	11,601	259.7	(X)	[17]37.4
35238 95	All other systems using 100-feet flexible hose feeder line and over	Number	(X)	6,989	39.6	(X)	[17]6.9
	Hog equipment		(X)	(X)	52.9	(X)	25.3
	Feeding equipment:						
35230 11	Wet or dry power units	Number	(X)	7,445	1.3	(X)	([23])
35230 13	Pig feeders, over 100-lbs. live weight		(X)	416,046	3.1	348,331	1.6
	Hog feeders, over 100-lbs. live weight:						
35230 15	4 feed openings or less, except rotary		(X)	69,066	2.4	76,312	.6
35230 17	Over 4 feed openings, except rotary		(X)	110,913	12.9	107,089	10.1
35230 19	All rotary feeders (no doors or trough dividers)		(X)	38,326	2.9	29,910	1.0
	Handling equipment:						
35230 21	Hog farrowing crate and stall	Number	(X)	78,834	6.8	67,375	2.8
35230 23	Hog pens	Feet	(X)	285,782	2.1	(S)	.5
	Watering equipment:						
35230 25	Hog waterer, heated (pressure type)	Number	(X)	52,328	3.3	49,604	2.2
35230 27	Hog waterer, not heated (pressure and gravity type)		(X)	597,750	3.9	247,509	1.7
35230 29	Gravity storage hot waterer, 20-gallon capacity or more	Number	(X)	21,425	1.3	32,364	1.4
35230 35	Other hog equipment		(X)	336,288	11.3	(X)	[23]3.2
35230 39	Attachments for hog equipment		(X)	(X)	1.6	(X)	.3
	Farm wagons and other farm transportation equipment		(X)	(X)	152.1	(X)	98.4
	Wagons (chassis only) and trailer gears, excluding motor trucks:						
	4-wheel:						
35230 53	Under 4-ton capacity	Number	(X)	12,372	4.6	23,158	7.4
35230 55	4-ton capacity and over		(X)	45,459	19.0	54,240	11.1
	Boxes and racks for mounting on wagons, trucks, and trailer gears:						
35230 61	Manual unloading or dump		(X)	16,437	10.9	16,957	6.5
	Power unloading:						
35230 65	Grain type (cannot handle forage)		(X)	2,541	6.6	2,023	1.2
35230 68	Forage type		(X)	16,594	30.1	26,637	26.5
35230 63	Gravity unloading (grain type only)		(X)	28,714	14.4	39,955	8.4
35230 72	Boxes with integral running gear, grain and forage types		(X)	6,097	13.3	(X)	5.0
35230 78	Other farm transportation equipment	Number	(X)	11,847	44.4	(X)	27.2
35230 81	Attachments for farm transportation equipment		(X)	(X)	8.9	(X)	5.1
35239 --	Parts for farm machinery and equipment, sold separately		(X)	(X)	1,609.5	(X)	741.4
	Parts sold to plants producing farm equipment (original equipment):						
35239 21	Parts for wheel tractors		29	(X)	291.5	(X)	168.0
35239 01	Parts for listers, cultivators, and weeders		15	(X)	15.6		
35239 02	Parts for harrows, rollers, stalk cutters, and soil pulverizers		20	(X)	35.9		
35239 03	Parts for planting, seeding, and fertilizing machinery		25	(X)	56.7		
35239 04	Parts for haying machinery		13	(X)	20.7		
35239 05	Parts for harvesting machinery		26	(X)	93.5		
35239 06	Parts for farm poultry machinery		7	(X)	9.1	(X)	96.5
35239 07	Parts for farm dairy machinery		2	(X)	([24])		
35239 08	Parts for hog and other barn and barnyard machinery		7	(X)	15.7		
35239 09	Parts for machines for preparing crops for market or for use		8	(X)	12.2		
35239 11	Parts for sprayers and dusters		19	(X)	17.9		
35239 18	Parts for other farm machinery, excluding wheel tractors		39	(X)	[24]101.5		

See footnotes at end of table.

Table 6a. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1977 and 1972—Con.

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Table 6a. Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972—Con.

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation see appendix A, Value of shipments)

1972 product code	Product	Unit of measure	Number of companies with shipments of $100,000 or more	Product shipments[1]	
				Quantity[2]	Value (million dollars)
			1972--Con.		
3524- --	LAWN AND GARDEN EQUIPMENT--Con.				
35242 --	Garden tractors and motor tillers--Con.				
	As reported in Current Industrial Reports MA-35A, Farm Machinery and Equipment--Con.				
	Garden tractors, except motor tillers--Con.				
	Walking type:				
35242 86	Under 7.0 engine hp	Number	(X)	89,022	19.1
35242 87	7.0 engine hp and over				
	Motor tillers:				
35242 88	Under 6 engine hp		(X)	307,909	34.4
35242 89	6 engine hp and over	Number	(X)	25,881	4.1
35242 91	Attachments for garden tractors		(X)	(X)	55.5
35242 92					
35247 --	Lawn mowers and snow blowers		(X)	(X)	550.2
35247 11	Hand (reel type) lawn mowers	Thousands	(X)	191.5	6.8
	Power lawn mowers:				
	Reel type:				
35247 23	Nonriding		(X)	81.7	9.1
35247 25	Integral riding, with fixed or floating mower		(X)	235.2	37.3
	Rotary type:				
35247 41	Hand traction		(X)	3,473.7	193.6
	Power traction:				
35247 53	Nonriding		(X)	843.8	80.8
35247 55	Integral riding, with fixed or floating mower		(X)	447.8	105.9
35247 61	Snow blowers and snow throwers, single purpose residential only, excluding large commercial type units		(X)	353.5	52.8
35247 81	Other, including gang-cutting units, sickle-bar mowers shipped as complete units, lawn edgers, and special cutting units	Thousands	(X)	381.8	27.2
35247 91	Attachments for lawn mowers, snow blowers, and similar equipment		(X)	(X)	28.3
35247 00	Lawn mowers and snow blowers, n.s.k.		(X)	(X)	8.4
35249 --	Parts for lawn and garden equipment, for sale separately		(X)	(X)	269.6
35249 11	Hedge trimmers and shears, power	Thousands	(X)	(S)	43.3
	Parts sold to plants producing farm equipment (original equipment):				
35249 13	Parts for garden tractors and motor tillers		(X)	(X)	24.8
35249 15	Parts for hedge trimmers and shears, power		(X)	(X)	(34)
35249 19	Parts for lawn mowers and snow blowers		(X)	(X)	141.0
	Parts for replacement and repair:				
35249 31	Parts for lawn mowers and snow blowers		(X)	(X)	33.2
35249 78	Parts for garden tractors and motor tillers:				
	As reported in the census of manufactures		(X)	(X)	24.5
	As reported in Current Industrial Reports MA-35A, Farm Machinery and Equipment		(X)	(X)	19.6
35249 81	Parts for hedge trimmers and shears, power		(X)	(X)	34 2.8
35240 00	Lawn and garden equipment, n.s.k., typically for establishments with 5 employees or more (see note)		(X)	(X)	2.5

Note: In the 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative record data rather than data actually collected from respondents. The employment cutoff used for administrative records for each industry and the shipments figures are included in the code ending with "002." In both the 1977 and 1972 Censuses of Manufactures, products not completely identified on the standard forms were coded in the appropriate product class (5 digits) followed by "00" or, in some cases, to the appropriate product group code (4 digits) followed by "000."

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (S) Withheld because estimate did not meet publication standards. (X) Not collected. (Z) Less than 50 thousand dollars or hours; under 50 employees. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.

[1]Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[3]Comparable data for 1977 and 1972 from CIR MA-36H are 747 units at $357.7 million for 1977 and 649 units at $353.3 million for 1972.

[4]Data for product codes 35112 01 and 35112 09 are combined to avoid disclosing operations of individual companies.

[5]Includes basic engines (short block engines), primarily automotive type, shipped for conversion to marine or other nonautomotive uses. In 1977, 434,221 gasoline engines were shipped for conversion, compared to 247,559 in 1972 (from CIR MA-35L). Data on gas or nonautomotive diesel engines shipped for conversion were withheld to avoid disclosing operations of individual companies.

[6]Data for gasoline engines under 11 horsepower and gasoline engines 11 horsepower and over were combined to avoid disclosing operations of individual companies.

[7]See CIR MA-35L for more product detail.

[8]For 1977, dual-fuel engines accounted for less than two percent of total value. For 1972, 74 units were produced, of which 33 units, valued at $8.0 million, were shipped (from CIR MA-35L).

[9]Includes engines converted from purchased engines or from engines received from another plant of same company.

[10]CIR MA-35S collects data on attachments for tractors only from manufacturers of complete machines. Census of manufactures collects data on attachments from both complete machine and other manufacturers.

[11]For 1972, farm-type wheel tractors were included with nonfarm-type wheel tractors.

[12]For 1972, product class 35232 total (as reported in CIR MA-35A), farm elevators and blowers, and product code 35232 75 include data for parts for farm elevators (replacement units only). For 1972, product code 35239 97 excludes parts for farm elevators.

[13]For 1972, product codes 35232 29, 35232 37, 35232 38, and 35232 48 were included with product code 35232 56.

Footnotes continued on next page.

[14]For 1972, ground drive conveyor type manure spreaders (1972 product code 35233 63) and liquid manure pumps (product code 35233 69) were included with product code 35233 82.

[15]For 1977, product code 35235 42 was included with product code 35235 82 to avoid disclosing operations of individual companies.

[16]For 1972, semimounted cutter bar mowers except mower-conditioners and product code 35236 59 were included with product code 35236 82.

[17]For 1972, product codes 35238 61, 35238 93, and 35238 95 were included with product class 35238 total, as reported in census of manufactures, but excluded from product class 35238 total, as reported in CIR MA-35A.

[18]For 1972, product class 35238 total, as reported in census of manufactures, included other farm machines, equipment, and attachments, including windmill heads and windmill tower at $117.3 million and all other farm machinery and equipment, n.s.k. at $15.1 million.

[19]For 1977, product code 35238 01 was included with product code 35238 23 to avoid disclosing operations of individual companies.

[20]For 1972, six-row and over rear mounted corn- and cutter-type cultivators were included with product code 35238 23.

[21]For 1972, product code 35238 40 contains data for supplemental heaters, excluding fans.

[22]For 1972, product code 35238 86 was included with product code 35238 91.

[23]For 1972, product code 35230 11 was included with product code 35230 35 to avoid disclosing operations of individual companies.

[24]For 1977, product code 35239 07 was included with product code 35239 18 to avoid disclosing operations of individual companies.

[25]Data as reported in CIR MA-35A are limited to shipments for repair and replacement, data as reported in census cover all cab shipments.

[26]For 1972, data are not available for products in product classes 3523A and 3523B.

[27]For 1977, product code 3523A 03 was included with product code 3523A 17 to avoid disclosing operations of individual companies.

[28]For 1977, product code 3523B 01 was included with product code 3523B 25 to avoid disclosing operations of individual companies.

[29]For 1977, product codes 3523B 06 and 3523B 13 were included with product code 3523B 21 to avoid disclosing operations of individual companies.

[30]For 1972, product codes 35230 00 and 35230 02 include data not specified by kind for Industry 3524, Lawn and Garden Equipment.

[31]1978 CIR MA-35A, Farm Machinery and Equipment, reports rotary garden (motor) tillers at 425,495 units valued at $65.8 million for under six engine horsepower and 110,899 units valued at $53.1 million for six engine horsepower and over for 1977. Data for two-wheel walking type tractors have been combined with attachments for garden tractors.

[32]For 1977, product codes 35241 30 and 35241 62 were combined to avoid disclosing operations of individual companies.

[33]See CIR MA-35A for more product detail.

[34]For 1972, product codes 35249 15 and 35249 81 were combined to avoid disclosing operations of individual companies.

Table 6b. Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

Product class and geographic area	Value of product shipments (million dollars)	
	1977	1972
35112, STEAM, GAS, AND HYDRAULIC TURBINES AND PARTS		
United States	1,415.4	541.5

East South Central Division:		
Mississippi	3.5	(NA)

Note: For 1972, the following value ranges (in million dollars) substitute for actual figures withheld to avoid disclosing operations of individual companies: AA--$1.0 to $1.9; BB--$2.0 to $4.9; CC--$5.0 to $9.9; EE--$10.0 to $19.9; FF--$20.0 to $49.9; GG--$50.0 or more.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because the estimate did not meet publication standards.

Table 6c. Product Classes—Value Shipped by All Producers: 1963, 1967, 1972 to 1977

(Millions of dollars)

1977 product code	Product class	1977	1976[1]	1975[1]	1974[1]	1973[1]	1972	1967	1963

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not collected. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

[2]Product class 35195 is combined with product class 35197 to avoid disclosing data for individual companies.

[3]Individual product codes included in product class for 1972 differ significantly from codes for prior year. Products shifting into or out of product class represent more than 15 percent of total U.S. value shipped.

[4]For 1967 and 1963, product class 35234 was combined with product class 35237 to avoid disclosing data for individual companies.

[5]Individual product codes included in product class for 1972 differ from the codes for 1967. Products shifting into or out of this product class represent approximately 12 percent of total 1967 shipments.

[6]For 1963 and earlier, parts were included with applicable product classes.

[7]For 1972, product class 35230 includes data not specified by kind for industry 3524.

[8]Product class structure of industry changed significantly between 1976 and 1977; 1977 data are not comparable with data for prior years. Industry 3524 was created for 1972 (being formerly a part of industry 3522); thus, no comparable data prior to 1972 exist.

Table 7. Materials Consumed by Kind: 1977 and 1972

(Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation see appendix A, Cost of materials)

1977 material code	Material	Unit of measure	1977 Quantity[1]	1977 Delivered cost (million dollars)	1972 Quantity	1972 Delivered cost (million dollars)

356101	Pumps and pump parts	Thousands	(D)	(D)		
356301	Air and gas compressors	Thousands	(D)	(D)	(X)	([10])
359902	Hydraulic and pneumatic equipment, except pumps and compressors		(X)	6.3		
369401	Engine electrical equipment, spark plugs, magnetos, generators, starters, etc		(X)	10.5		
359225	Pistons, piston rings, carburetors, valves, intake and exhaust only		(X)	3.4		
301131	Pneumatic tires	Thousands	**8,165.0	26.3	(S)	33.1
301141	Inner tubes	Thousands	(D)	(D)		
285101	Paints, varnishes, lacquers, shellacs, japans, and enamels	Thousand gal	*779.5	5.0		
306902	Fabricated rubber products, except tires, tubes, hoses, beltings, and gaskets		(X)	4.3		
307902	Fabricated plastics products, except gaskets		(X)	25.9	(X)	[10]241.0
345001	Bolts, nuts, screws, rivets, and screw machine products		(X)	23.6		
970099	All other materials and components, parts, containers, and supplies		(X)	249.1		
971000	Materials, parts, containers, and supplies, n.s.k.[5]		(X)	32.6	(X)	84.9

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (S) Withheld because estimate did not meet publication standards. (X) Not collected. n.s.k. Not specified by kind.

[1]For some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimate in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]For 1977, material codes 336100 and 336200 were combined to avoid disclosing operations of individual companies.

[3]From 1972 Census of Manufactures Supplemental Inquiry: Consumption of Materials, Parts, Containers, and Supplies During 1972 (Form MA-131).

[4]For 1972, material codes 344001, 344301, and 346901 were included with material code 970099.

[5]Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

[6]For 1972, material code 344001 was included with material code 970099.

[7]For 1972, materials codes 346901, 356810, 356601, 356101, 356301, 359902, 369401 and 359225 were combined with material codes 285101, 306902, 307902, 345001, and 970099.

[8]For 1977, material code 359225 was included with material code 970099 to avoid disclosing operations of individual companies.

[9]For 1977, material codes 335102 and 335152 were combined to avoid disclosing operations of individual companies.

[10]For 1972, material codes 346901, 356810, 356101, 356301, 359902, 369401, and 359225 were included with material code 970099.

TABLES

INDUSTRY STATISTICS

1a. Historical Statistics: 1977 and Earlier Years 7
1b. Selected Operating Ratios: 1977 and Earlier Years 9
2. Geographic Area: 1977 and 1972 11
3a. Summary Statistics: 1977 15
3b. Supplemental Statistics Based on Sample Estimates: 1977 . . . . . 16A
4. Employment Size of Establishment: 1977 17
5a. Industry and Primary Product Class Specialization: 1977 19

PRODUCT STATISTICS

5b. Industry-Product Analysis—Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967 21
5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977 22
6a. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1977 and 1972 24
6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972 37
6c. Product Classes—Value Shipped by All Producers: 1963, 1967, and 1972 to 1977 40

MATERIAL STATISTICS

7. Materials Consumed by Kind: 1977 and 1972 41

DESCRIPTION OF INDUSTRIES

CONSTRUCTION, MINING, AND MATERIALS HANDLING MACHINERY AND EQUIPMENT

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3531 Construction Machinery
3532 Mining Machinery
3533 Oil Field Machinery
3534 Elevators and Moving Stairways
3535 Conveyors and Conveying Equipment
3536 Hoists, Cranes, and Monorails
3537 Industrial Trucks and Tractors

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 3531, CONSTRUCTION MACHINERY

This industry comprises establishments primarily engaged in the manufacture of heavy machinery and equipment used by the construction industries, such as bulldozers; concrete mixers; cranes, except industrial plant type; dredging machinery; pavers; and power shovels. Establishments primarily engaged in the manufacture of mining equipment are classified in industry 3532, and well drilling machinery in industry 3533.

The 1977 definition of this industry has been revised from that given in the 1972 SIC manual, but the SIC number and title are unchanged. For 1977, portable water well and blast hole drills were reclassified from this industry to industry 3533, Oil Field Machinery.

The total value of shipments for establishments classified in the Construction Machinery industry amounted to $12,629 million in 1977, an increase of 107 percent from 1972. The value of shipments of products classified as primary to the industry was $11,570 million, an increase of 105 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were power cranes, draglines, and shovels (excavators), for which shipments increased 147 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $5,744 million in 1977, was 83 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 155.3 thousand employees, an increase of 16 percent from 1972. The leading States in employment were Illinois, Iowa, Ohio, and Wisconsin, accounting for approximately 60 percent of the industry's 1977 employment. These same States were in the forefront for 1972 when they accounted for 60 percent of the industry's employment, although there has been some shift in the relative importance of individual States.

The 1977 census obtained data on shipments of most types of construction machinery only at product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of most types of construction machinery are reported annually and quarterly in the Census Bureau's Current Industrial Reports (CIR) MQ-35D and MA-35D, Construction Machinery, and monthly in the M35S, Tractors, Except Garden Tractors.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 2 percent of total value of shipments.

INDUSTRY 3532, MINING MACHINERY

This industry comprises establishments primarily engaged in the manufacture of heavy machinery and equipment used by the mining industries, such as coal breakers, mine cars, mineral cleaning machinery, concentration machinery, core drills, coal cutters, portable rock drills, and rock crushing machinery. Establishments primarily engaged in the manufacture of construction machinery are classified in industry 3531, well drilling

machinery in industry, 3533, and coal and ore conveyors in industry 3535.

The total value of shipments for establishments classified in the Mining Machinery industry amounted to $1,997 million in 1977, an increase of 159 percent from 1972. The value of shipments of products classified as primary to the industry was $1,786 million, an increase of 145 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) Value added by manufacture, at $1,019 million in 1977, was 159 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 31.4 thousand employees, an increase of 47 percent from 1972. The leading States in employment were Pennsylvania, Ohio, West Virginia, and Wisconsin, accounting for approximately 45 percent of the industry's 1977 employment. These same States were in the forefront for 1972.

The 1977 census obtained data on shipments of mining machinery only at product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of mining machinery are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-35F, Mining Machinery and Equipment. Some of these data are also shown in table 6a.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 4 percent of total value of shipments.

INDUSTRY 3533, OIL FIELD MACHINERY

This industry comprises establishments primarily engaged in the manufacture of machinery and equipment for use in oil and gas fields or for drilling water wells.

The 1977 definition of this industry has been revised from that given in the 1972 SIC manual, but the SIC number and title are unchanged. For 1977, portable water well and blast hole drills were reclassified to this industry from Industry 3531, Construction Machinery.

The total value of shipments for establishments classified in the Oil Field Machinery industry amounted to $3,912 million in 1977, an increase of 223 percent from 1972. The value of shipments of products classified as primary to the industry was $3,219 million, an increase of 229 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were rotary drilling subsurface bits, for which shipments increased 227 percent, and well control equipment, for which shipments increased 533 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $2,438 million in 1977, was 209 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 58.6 thousand employees, an increase of 63 percent from 1972. The leading States in employment were Texas, California, Oklahoma, and Pennsylvania, accounting for approximately 95 percent of the industry's 1977 employment. These same States were in the forefront for 1972.

The 1977 census obtained data on shipments of portable water well and blast hole drilling rigs only at the total level. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of portable water well and blast hole drilling rigs are reported quarterly in the Census Bureau's Current Industrial Reports (CIR) MQ-35D, Construction Machinery. Some of these data are also shown in table 6a.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 2 percent of total value of shipments.

INDUSTRY 3534, ELEVATORS AND MOVING STAIRWAYS

This industry comprises establishments primarily engaged in the manufacture of passenger or freight elevators, automobile lifts, dumb waiters, and moving stairways. Establishments primarily engaged in the manufacture of commercial conveyor systems and equipment are classified in industry 3535, and farm elevators in industry 3523.

The total value of shipments for establishments classified in the Elevators and Moving Stairways industry amounted to $490 million in 1977, an increase of 1 percent from 1972. The value of shipments of products classified as primary to the industry was $435 million, an increase of 6 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) Value added by manufacture, at $284 million in 1977, was 8 percent below value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 10.2 thousand employees, a decrease of 32 percent from 1972. The leading States in employment were New Jersey, New York, Indiana, and California. Data for New Jersey have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 8 percent of total value of shipments.

INDUSTRY 3535, CONVEYORS AND CONVEYING EQUIPMENT

This industry comprises establishments primarily engaged in the manufacture of conveyors and conveying equipment for installation in factories, warehouses, mines, and other industrial and commercial establishments. Establishments primarily engaged in the manufacture of passenger or freight elevators, dumb waiters, and moving stairways are classified in industry 3534, and overhead traveling cranes and monorail systems in industry 3536.

The total value of shipments for establishments classified in the Conveyors and Conveying Equipment industry amounted to $1,903 million in 1977, an increase of 97 percent from 1972. The value of shipments of products classified as primary to the industry was $1,685 million, an increase of 104 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) Value added by manufacture, at $1,022 million in 1977, was 89 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are threfore not adjusted for changes in price levels.

In 1977 the industry had 33.0 thousand employees, an increase of 21 percent from 1972. The leading States in employment were Michigan, Pennsylvania, Ohio, and Illinois, accounting for approximately 40 percent of the industry's 1977 employment. These same States were in the forefront for 1972 when they accounted for approximately 45 percent of the industry's employment, although there has been some shift in the relative importance of individual States.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 5 percent of total value of shipments.

INDUSTRY 3536, HOISTS, CRANES, AND MONORAILS

This industry comprises establishments primarily engaged in the manufacture of overhead traveling cranes, hoists, and monorail systems for installation in factories, warehouses, and other industrial and commercial establishments.

The total value of shipments for establishments classified in the Hoists, Cranes, and Monorails industry amounted to $836 million in 1977, an increase of 59 percent from 1972. The value of shipments of products classified as primary to the industry was $901 million, an increase of 102 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The product accounting for a significant portion of this change was electric bridge type overhead traveling cranes, for which shipments increased 133 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $453 million in 1977, was 65 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 15.8 thousand employees, a decrease of 3 percent from 1972. The leading States in employment were Ohio, Pennsylvania, Michigan, and Illinois, accounting for approximately 40 percent of the industry's 1977 employment.

The establishments in this industry with less than 20 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 8 percent of total value of shipments.

INDUSTRY 3537, INDUSTRIAL TRUCKS AND TRACTORS

This industry comprises establishments primarily engaged in the manufacture of industrial trucks, tractors, trailers, stackers (truck type), and related equipment used for handling materials on floors and paved surfaces in and around industrial and commercial plants, depots, docks, and terminals. Establishments primarily engaged in the manufacture of motor vehicles and motor vehicle type trailers are classified in industry group 371, farm type wheel tractors in industry 3523, wheel tractor shovel loaders and tracklaying tractors in industry 3531, and wood pallets and skids in industry 2448.

The total value of shipments for establishments classified in the Industrial Trucks and Tractors industry amounted to $1,920 million in 1977, an increase of 85 percent from 1972. The value of shipments of products classified as primary to the industry was $1,800 million, an increase of 79 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were electric industrial trucks, for which shipments increased 117 percent, and internal combustion powered trucks, for which shipments increased 60 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $877 million in 1977, was 67 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 28.8 thousand employees, an increase of 116 percent from 1972. The leading States in employment were Ohio, Illinois, Michigan, and California, accounting for approximately 55 percent of the industry's 1977 employment.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 6 percent of total value of shipments.

Table 1a. Historical Statistics for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year[1]	Companies[2] (no.)	All establishments		All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Expenditures and assets		End-of-year inventories (million dollars)	Ratios	
		Total (no.)	With 20 employees or more (no.)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)				New capital expenditures (million dollars)	Gross value of fixed assets (million dollars)		Specialization (percent)	Coverage (percent)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. r Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

California	E1	55	21	2.0	24.2	1.3	2.4	13.9	44.8	54.7	98.7	1.8	(NA)	(D)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. Summary Statistics for the Industry: 1977

[For explanation of terms, see appendix A]

Item	Unit of measure	Construction machinery (SIC 3531)	Mining machinery (SIC 3532)	Oil field machinery (SIC 3533)	Elevator and moving stairways (SIC 3534)	Conveyors and conveying equipment (SIC 3535)	Hoists, cranes, and monorails (SIC 3536)	Industrial trucks and tractors (SIC 3537)
Primary product specialization ratio[1]	percent	91	88	88	96	90	87	94
Coverage ratio[2]	do	95	88	95	93	87	76	95
All establishments	number	922	344	478	152	617	242	475
With 1 to 19 employees	do	476	176	231	80	322	121	305
With 20 to 99 employees	do	231	100	143	49	214	84	118
With 100 employees or more	do	215	68	104	23	81	37	52
All employees, average for year	1,000	155.3	31.4	58.6	10.2	33.0	15.8	28.8
Payroll for year, all employees	mil. dol.	2 547.1	425.9	867.5	141.9	477.8	210.5	427.3

Used capital expenditures	do	11.5	5.6	14.9	0.7	6.1	1.6	9.8

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

(For explanation of terms, see appendix A. For description of annual survey of manufactures (ASM), see appendix B)

Item	Construction machinery (SIC 3531)		Mining machinery (SIC 3532)		Oil field machinery (SIC 3533)		Elevators and moving stairways (SIC 3534)	
	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)
Purchased services:								
Cost of purchased services for repair of--								
Buildings and other structures	16.4	3	3.0	13	6.6	14	(0.6)	16

New capital expenditures	9.0	14	(5.0)	25	(13.4)	27
Used capital expenditures	1.9	14	(0.8)	59	(1.9)	70
Retirements	3.5	6	(0.3)	(A)	4.4	5
End of year	152.4	9	(65.0)	17	180.3	4
Machinery and equipment:						
Beginning of year	178.0	4	115.3	6	289.9	3
New capital expenditures	24.2	5	12.9	14	39.2	6
Automobiles, trucks, etc., for highway use[3]	(2.6)	(A)	(0.6)	(A)	(1.0)	(A)
Computers and peripheral data processing equipment[3]	(D)	(A)	(Z)	(A)	(0.4)	(A)
All other[3]	(D)	(A)	(12.0)	(A)	(31.6)	63
New machinery and equipment, n.s.k.[4]	(4.4)	(A)	(0.3)	(A)	6.2	(A)
Used capital expenditures	3.5	8	(1.4)	22	9.9	7
Retirements	8.1	14	4.5	5	15.5	3
End of year	197.6	4	125.1	5	373.3	2
Total gross value of depreciable assets:						
Beginning of year	323.0	3	174.9	5	459.3	3
New capital expenditures	33.3	6	(17.9)	17	52.6	9
Used capital expenditures	5.4	9	(2.1)	26	11.7	14
Retirements	12.0	11	4.9	7	20.0	3
End of year	349.7	6	190.1	4	503.7	3
Depreciation charges during 1977	21.5	3	16.3	10	31.3	3
Buildings and other structures	5.7	5	(3.5)	21	6.8	4
Machinery and equipment	15.8	4	12.8	12	24.5	3

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

3537	**Industrial trucks and tractors:**										
	Entire industry	475	28.8	427.3	19.4	36.7	252.2	876.7	1 045.2	1 920.1	48.3
	Establishments with 75 percent specialization or more	446	25.1	371.3	16.9	32.1	220.8	776.5	933.9	1 708.7	38.8
35371	Industrial trucks, tractors, straddle carriers:										
	Establishments with this product class primary	108	22.6	341.9	15.0	28.3	199.5	713.5	868.6	1 586.3	39.5
	Establishments with 75 percent specialization or more in class	76	14.1	216.1	9.2	16.9	122.6	473.1	614.6	1 087.0	22.4
35372	Parts for industrial trucks and tractors:										
	Establishments with this product class primary	32	2.7	39.0	2.0	3.8	25.2	81.4	66.2	142.4	4.5
	Establishments with 75 percent specialization or more in class	28	2.2	30.4	1.6	3.2	20.0	68.4	55.8	118.6	4.0

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. Industry-Product Analysis — Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. 		1972	527.3	375.9	103.8	47.6	78	446.0	375.9	70.1	84
		1967	444.4	320.0	90.0	34.4	78	385.3	320.0	65.3	83
3537	Industrial trucks and tractors	1977	1,920.1	1,701.8	102.0	116.3	94	1,799.9	1,701.8	98.1	95
		1972	1,035.4	916.1	42.2	77.1	96	1,004.8	916.1	88.7	91
		1967	778.0	672.4	49.8	55.8	93	780.7	672.4	108.3	86

[1]For 1967 and later years, figures were not comparable with those in earlier years because some companies included construction receipts with value of shipments in 1966 and prior years. For 1967, value added by manufacture and value of shipments would have been $50 million to $75 million higher had they been on a comparable basis with earlier years.

Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

1977 product code	Product group, product class, and miscellaneous receipts	All industries	Construction machinery (SIC 3531)	Mining machinery (SIC 3532)	Oil field machinery (SIC 3533)	Elevators and moving stairways (SIC 3534)	Conveyors and conveying equipment (SIC 3535)	Hoists, cranes, and monorails (SIC 3536)	Industrial trucks and tractors (SIC 3537)	Other industries

See footnotes at end of table.

Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977 — Con.

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

1977 product code	Product group, product class, and miscellaneous receipts	All industries	Construction machinery (SIC 3531)	Mining machinery (SIC 3532)	Oilfield machinery (SIC 3533)	Elevators and moving stairways (SIC 3534)	Conveyors and conveying equipment (SIC 3535)	Hoists, cranes, and monorails (SIC 3536)	Industrial trucks and tractors (SIC 3537)	Other industries

				Quantity[2]	Value (million dollars)	Quantity	Value (million dollars)
	CONSTRUCTION MACHINERY--Con.						
35314 --	Power cranes, draglines, and shovels (excavators), including surface mining equipment, parts, and attachments, but not including equipment for mounting on tractors--Con. As reported in Current Industrial Reports MA-35D, Construction Machinery--Con.						
	Cranes	Number	(NA)	6,732	839.8	[9]6,769	[9]459.0
	Cable operated:						
	Crawler mounted:						
	Maximum working load:						
35314 66	Up to and including 15 tons		(NA)	193	16.1	1,349	142.4
35314 67	Over 15 tons up to and including 30 tons		(NA)				
35314 68	Over 30 tons up to and including 45 tons		(NA)	144	16.6		
35314 69	Over 45 tons up to and including 60 tons		(NA)	198	30.4		
35314 70	Over 60 tons up to and including 75 tons		(NA)	47	8.6		
35314 71	Over 75 tons up to and including 90 tons		(NA)	96	24.8		
35314 72	Over 90 tons up to and including 120 tons		(NA)	108	28.5		
35314 25	Over 120 tons up to and including 150 tons		(NA)	182	82.0		
35314 26	Over 150 tons		(NA)	145	79.9		
	Truck or wheel (rubber) mounted:						
	Maximum working load:						
35314 73	Up to and including 30 tons		(NA)	268	28.7	732	61.9
35314 74	Over 30 tons up to and including 45 tons		(NA)				
35314 75	Over 45 tons up to and including 60 tons		(NA)	122	19.5		
35314 76	Over 60 tons up to and including 75 tons		(NA)	72	12.8		
35314 77	Over 75 tons up to and including 90 tons		(NA)	101	24.8	212	39.4
35314 78	Over 90 tons up to and including 120 tons		(NA)	85	30.3		
35314 79	Over 120 tons up to and including 150 tons		(NA)				
35314 80	Over 150 tons		(NA)	15	9.2		
	Hydraulic operated:						
35314 30	Crawler mounted		(NA)	-	-	[9](D)	[9](D)
	Truck mounted (rubber):						
	Maximum working load:						
35314 31	Up to and including 20 tons		(NA)	84	5.6	4,476	215.3
35314 32	Over 20 tons up to and including 30 tons		(NA)	232	21.5		
35314 33	Over 30 tons up to and including 55 tons		(NA)	304	37.8		
35314 34	Over 55 tons		(NA)	210	43.1		
	Self-propelled (rubber):						
	Maximum working load:						
35314 36	Up to and including 8 tons		(NA)	507	15.5		
35314 37	Over 8 tons up to and including 12 1/2 tons		(NA)	156	8.5		
35314 38	Over 12 1/2 tons up to and including 15 tons		(NA)	1,096	70.6		
35314 39	Over 15 tons up to and including 18 tons		(NA)	856	64.3		
35314 40	Over 18 tons up to and including 25 tons		(NA)	815	66.0		
35314 41	Over 25 tons		(NA)	696	94.6		
	Walking draglines:						
	Rated bucket capacity:						
35314 96	Up to and including 40 cu. yd		(NA)	34	349.6	(D)	(D)
35314 97	Over 40 cu. yd. up and including 60 cu. yd		(NA)				
35314 98	Over 60 cu. yd		(NA)				
	Other cranes:						
35314 03	Locomotive, except wrecking		(NA)	85	20.6	60	20.5
35314 05	Full circle revolving with booms (such as whirleys and hammerheads)		(NA)	81	22.3		
35314 07	Other cranes, including locomotive wrecking		(NA)	3,048	68.0	341	13.9
	Attachments for power cranes, draglines, and excavators (sold separately):						
35314 81	Magnet		(NA)	-	-	(X)	[6]27.5
35314 82	Log loader		(NA)	1,362	6.7		
35314 83	Shovel		(NA)				
35314 84	Hoe		(NA)				
	Dragline buckets:						
	Rated bucket capacity:						
35314 87	Up to and including 40 cu. yd. capacity		(NA)	962	7.7		
35314 88	Over 40 cu. yd. up to and including 60 cu. yd		(NA)				
35314 89	Over 60 cu. yd		(NA)				
35314 91	Clamshell/grapple		(NA)	1,290	6.9		
35314 92	All other attachments	Number	(NA)	855	23.0		
35314 85	Parts for power cranes, draglines, and shovels		(NA)	(X)	395.6	(X)	[6]129.5

See footnotes at end of table.

Table 6a. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1977 and 1972—Con.

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation see appendix A, Value of shipments)

1977 product code	Product	Unit of measure	1977			1972	
			Number of companies with shipments of $100,000 or more	Product shipments[1]		Product shipments	
				Quantity[2]	Value (million dollars)	Quantity	Value (million dollars)
	CONSTRUCTION MACHINERY--Con.						
35316 --	Mixers, pavers, and related equipment, excluding parts:						
	As reported in the census of manufactures	.....	63	(X)	304.8	(X)	[10]252.0
	As reported in Current Industrial Reports MQ-35D, Construction Machinery	.....	(NA)	(X)	310.8	(X)	[11]184.8
	Concrete:						
	Mixers:						
35316 12	Portable, under 3 1/2 cu. yd. capacity, except plaster and mortar, hand or power operated	Number	(NA)	([12])	([12])	[11]34,800	[11]3.6
	Portable, 3 1/2 cu. yd. capacity and over, except plaster and mortar:						
35316 21	Truck-mixer or agitator		(NA)	4,901	58.0	7,431	51.6
35316 25	Other than truck-mixer		(NA)	([12])	([12])	3,373	3.8
35316 31	Plaster and mortar, all sizes		(NA)	([12])	([12])	[11]26,500	[11]15.4
35316 34	Pavers, finishers, and spreaders		(NA)	1,204	17.4	[11]27,100	[11]23.1
35316 37	Concrete batching plants, bin and batch for concrete aggregate only and bulk cement		(NA)	395	33.4	699	25.7
35316 38	Concrete vibrators, including screeds		(NA)	(X)	[12]20.4	[11]6,600	[11]10.4
	Concrete pumps, mobile:						
	Trailer mounted:						
35316 17	Under 25 cu. yd./hr.		(NA)	1,183	13.5	([13])	([13])
35316 18	25 cu. yd./hr. and over		(NA)				
	Trailer mounted, including value of booms and truck:						
35316 19	Under 50 cu. yd./hr.		(NA)	298	18.2		
35316 20	50 cu. yd./hr. to 100 cu. yd./hr		(NA)				
35316 23	Over 100 cu. yd./hr		(NA)				
	Bituminous equipment:						
35316 41	Distributors		(NA)	588	19.6	572	4.6
	Pavers, self-propelled		(NA)	1,026	46.5	815	33.2
35316 13	Under 8,500 lb. gross weight (basic unit)		(NA)	589	13.2	815	33.2
35316 14	8,500 lb. to 19,999 lb. gross weight (basic unit)		(NA)				
35316 15	20,000 lb. to 34,999 lb. gross weight (basic unit)		(NA)	437	33.4		
35316 16	35,000 lb. and over gross weight		(NA)				
	Asphalt plants:						
	Central mixing plants (batch type and continuous type) (t.p.h. = tons per hour)		(NA)	198	58.7	206	47.3
35316 45	Under 2,000 lb. batch (under 60 t.p.h.)		(NA)	72	15.0	81	11.8
35316 46	2,000 lb. to 3,500 lb. batch (60 to 119 t.p.h.)		(NA)				
35316 47	4,000 lb. to 5,500 lb. batch (120 to 179 t.p.h.)		(NA)				
35316 48	6,000 lb. to 7,500 lb. batch (180 to 239 t.p.h.)		(NA)	126	43.7	56	13.8
35316 49	8,000 lb. batch and over (240 t.p.h. and over)		(NA)			69	21.6
35316 39	Other bituminous equipment, including mixers, heating kettles, heaters, circulators, travel mix type, asphalt boxes, and spreader boxes		(NA)	3,547	15.3	3,170	12.0
	Stabilization mixing equipment:						
35316 54	Central plants		(NA)	199	9.7	220	6.6
35316 55	Mix-in-place	Number	(NA)				
35317 --	Tractor shovel loaders, excluding parts and attachments	.....	(NA)	(X)	1,537.2	(X)	810.7
	Wheel type:						
35317 10	As reported in the census of manufactures	.....	19	(X)	1,105.7	(X)	605.4
	As reported in Current Industrial Reports MQ-35D, Construction Machinery	.....	(NA)	36,628	1,131.2	(X)	[4] [14]592.8
	4-wheel drive skid steer:						
35317 19	Under 35 hp	Number	(NA)	14,289	77.3	10,415	36.9
35317 21	Over 35 hp		(NA)	6,722	61.9	3,675	19.6
	Front-end loader (integral design, rear engine mount)		(NA)	15,617	992.0	(D)	(D)
	4-wheel drive:						
35317 03	Under 1 cu. yd. bucket capacity		(NA)	[15]1,801	[15]31.8	1,266	15.0
35317 04	1 cu. yd. up to 1 1/2 cu. yd		(NA)				
35317 05	1 1/2 cu. yd. up to 2 cu. yd		(NA)	2,106	59.4	3,963	73.6
35317 06	2 cu. yd. up to 2 1/2 cu. yd		(NA)	2,825	90.8	1,997	48.5
35317 07	2 1/2 cu. yd. up to 3 1/2 cu. yd		(NA)	2,851	137.1	3,151	92.5
35317 08	3 1/2 cu. yd. up to 5 cu. yd		(NA)	3,106	222.9	2,123	86.6
35317 15	5 cu. yd. up to 7 1/2 cu. yd		(NA)	2,131	268.7	1,521	99.1
35317 16	7 1/2 yd. up to 10 cu. yd		(NA)	797	181.3	361	42.2
35317 17	10 cu. yd. and over		(NA)				
	2-wheel drive:						
35317 11	Under 1 cu. yd. bucket capacity		(NA)	([15])	([15])	(D)	(D)
35317 12	1 cu. yd. bucket capacity and over	Number	(NA)	([15])	([15])		
	Tracklaying type (20 net engine hp. and over):						
35317 20	As reported in the census of manufactures	.....	7	(X)	224.7	(X)	205.3
	As reported in Current Industrial Reports MA-35S, Tractors, Except Garden Tractors[6]	.....	(NA)	6,179	219.6	10,454	208.9
35317 11	20 to 44 net engine hp	Number	(NA)	3,561	82.3	2,199	24.3
35317 13	45 to 59 net engine hp		(NA)				
35317 15	60 to 89 net engine hp	Number	(NA)			3,966	60.0

			Number of companies with shipments of $100,000 or more	Product shipments[1]		Product shipments	
				Quantity[2]	Value (million dollars)	Quantity	Value (million dollars)
	CONSTRUCTION MACHINERY--Con.						
35317 --	Tractor shovel loaders, excluding parts and attachments--Con.						
	Tracklaying type (20 net engine hp. and over)--Con.						
	As reported in Current Industrial Reports MA-35S, Tractors, Except Garden Tractors--Con.						
35317 18	90 to 159 net engine hp	Number	(NA)	2,618	137.3	4,289	124.6
35317 22	160 to 259 net engine hp		(NA)				
35317 25	260 net engine hp. and over		(NA)				
35317 30	Wheel tractor-chassis shipped as part of front engine mount, integral design tractor shovel loader/backhoes (NEHP):						
	As reported in the census of manufactures		7	(X)	206.1	(16)	(16)
	As reported in Current Industrial Reports MA-35S, Tractors, Except Garden Tractors	Number	(NA)	20,204	212.9		
35317 00	Tractor shovel loaders, excluding parts and attachments, n.s.k.		(NA)	(X)	0.8	(X)	-
35318 --	Scrapers, graders, rollers, and off-highway trucks and coal haulers, trailers, wagons, and construction machinery for mounting on tractors and other prime movers, excluding parts:						
	As reported in the census of manufactures		79	(X)	1,723.8	(X)	964.8
	As reported in Current Industrial Reports MQ-35D, Construction Machinery		(NA)	(X)	1,709.6	(X)	[17]932.4
	Scrapers	Number	(NA)	4,518	189.9	[4]4,976	[4]132.8
	Conventional scraper bowls (dig, carrying, and hauling) used as part of a self-propelled, nonelevating, 2-wheel type scraper, S.A.E. struck rating:						
35318 12	7 cu. yd. up to 12 cu. yd. struck		(NA)	1,916	124.2	(D)	(D)
35318 13	12 cu. yd. up to 18 cu. yd. struck		(NA)				
35318 14	18 cu. yd. up to 26 cu. yd. struck		(NA)				
35318 15	26 cu. yd. up to 35 cu. yd. struck		(NA)				
35318 16	35 cu. yd. struck and over		(NA)				
	Elevating scraper bowls (dig, carrying, and hauling) 2- and 4-wheel type, S.A.E. heaped rating:						
35318 17	7 cu. yd. up to 12 cu. yd. heaped		(NA)	1,134	26.2	1,652	23.8
35318 18	12 cu. yd. up to 18 cu. yd. heaped		(NA)				
35318 19	18 cu. yd. up to 30 cu. yd. heaped		(NA)	1,468	39.5	436	12.7
35318 21	30 cu. yd. and over		(NA)			(D)	(D)
35318 29	All other scraper bowls, towed type, 2- and 4-wheel, and other scraper bowls, n.e.c.		(NA)			(D)	(D)
	Motor graders and light maintainers		(NA)	6,706	324.6	6,524	154.8
35318 23	Under 75 net engine hp		(NA)	661	16.7	581	5.6
35318 24	75 to 114 net engine hp		(NA)			4,005	90.8
35318 25	115 to 144 net engine hp		(NA)	3,021	141.1		
35318 28	145 to 199 net engine hp		(NA)	3,024	166.8	1,938	58.4
35318 30	200 net engine hp. and over		(NA)	9,537	140.2	6,968	77.4
	Rollers, self-propelled type, ride-on						
	Steel wheeled, static (non-vibratory):						
35318 31	3-wheeled and segmented		(NA)	2,356	7.5	187	3.7
	Tandem, 2- and 3-axle		(NA)			3,617	20.7
35318 34	Under 3 tons		(NA)			1,843	4.2
35318 35	4 tons (3 tons thru 4 1/2 tons)		(NA)	487	5.7	757	5.4
35318 36	5 tons (over 4 1/2 tons thru 7 1/2 tons)		(NA)	149	2.2	319	2.8
35318 37	8 tons and over (over 7 1/2 tons)		(NA)	330	6.5	698	8.3
	Pneumatic tire:						
35318 51	4,000 lb. wheel load and under		(NA)	380	6.3	663	5.4
35318 52	Over 4,000 lb. up to and including 8,000 lb. wheel load		(NA)	910	33.3	242	4.1
35318 54	Over 8,000 lb. wheel load		(NA)			58	1.1
35318 39	Sheepsfoot, static		(NA)			404	14.9
	Vibratory compactors, self-propelled:						
	Single drum (one drum vibrating):						
35318 40	Under 6 ton gross weight		(NA)	2,255	12.8	1,797	27.4
35318 41	6 ton gross weight and over		(NA)	1,758	46.2		
35318 43	Double drum (two drums vibrating), all sizes		(NA)	821	19.5		
35318 44	Other		(NA)	91	.2		
	Rollers, towed type		(NA)	343	2.1	909	4.2
35318 42	Pneumatic tire, including vibratory		(NA)	37	.2	82	.5
35318 49	Sheepsfoot and bar type		(NA)	154	1.0	410	1.3
35318 56	Vibratory, single steel drum		(NA)	152	1.0	417	2.4
	Construction machinery for mounting on tractors, shovel loaders, or other prime movers[18]		(NA)	99,590	457.8	(S)	[4][19]292.7
	Sidebooms or pipehandlers:						
35318 71	Under 30,000 lb. lift capacity		(NA)	1,275	21.6	643	7.9
35318 72	30,000 to 110,000 lb. lift capacity		(NA)				
35318 73	Over 110,000 lb. lift capacity	Number	(NA)				

See footnotes at end of table.

Table 6a. Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972 - Con.

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation see appendix A, Value of shipments)

1977 product code	Product	Unit of measure	1977			1972	
			Number of companies with shipments of $100,000 or more	Product shipments[1]		Product shipments	
				Quantity[2]	Value (million dollars)	Quantity	Value (million dollars)
	CONSTRUCTION MACHINERY--Con.						
35318 --	Scrapers, graders, rollers, and off-highway trucks and coal haulers, trailers, wagons and construction machinery for mounting on tractors and other prime movers, excluding parts--Con.						
	As reported in Current Industrial Reports MQ-35D, Construction Machinery--Con.						
	Construction machinery for mounting on tractors, shovel loaders, or other prime movers--Con.						
	Dozers, for crawler and wheel tractors:						
35318 74	6 ft., 0 in. up to 10 ft., 1 in.	Number	(NA)	7,684	27.0	17,007	64.0
35318 75	10 ft., 1 in. up to 14 ft., 1 in.		(NA)	8,632	82.1		
35318 76	14 ft., 1 in. and over		(NA)				
35318 78	Winches (towing, logging, and oil-field types)		(NA)	9,298	34.0	(D)	(D)
	Backhoes:						
35318 79	Under 14 ft. digging depth		(NA)	5,295	14.6	20,226	98.9
35318 80	14 ft. digging depth and over		(NA)	21,599	113.0		
35318 82	Front-end loaders (3/8 cu. yd. and over), nonfarm type[20]		(NA)	28,908	72.3	36,187	44.5
35318 83	Logging arches		(NA)	573	5.3	(D)	(D)
35318 87	Rippers and rooters, heavy rear mounted		(NA)	4,859	38.8	5,913	23.2
	Continuous ditching and trenching attachments:						
35318 88	Crawler-vehicle mounted		(NA)	([21])	([21])	(D)	(D)
35318 89	Rubber-tired-vehicle mounted		(NA)	([21])	([21])	(D)	(D)
35318 90	Fork lifts		(NA)	1,625	8.5	([22])	([22])
35318 91	All other construction machinery for mounting, including cranes, cable power control units, hydraulic power control units, etc		(NA)	[21]9,842	[21]40.7	([22])	([22])
	Off-highway equipment		(NA)	5,561	594.9	6,217	270.1
	Rear dump earth, rocks, and ore load on back haulers		(NA)	2,816	473.4	2,014	168.5
35318 55	Under 20 tons capacity		(NA)	210	16.9	395	17.4
35318 57	20 tons to and including 30 tons capacity		(NA)				
35318 59	Over 30 tons up to and including 45 tons capacity		(NA)	1,225	143.3	960	64.4
35318 65	Over 45 tons up to and including 70 tons capacity		(NA)	889	155.0	394	36.9
35318 69	Over 70 tons up to and including 100 tons capacity		(NA)	492	158.1	265	49.9
35318 70	Over 100 tons capacity		(NA)				
35318 84	Integral self-powered side and botton dumps, including coal haulers, all sizes		(NA)	([23])	([23])		
	Off-highway truck type, rear dump chassis used as a tractor for towing earth, rock, coal, and ore trailers:						
35318 85	Under 600 gross hp		(NA)	60	11.6	3,998	88.5
35318 86	600 gross hp. through 899 gross hp		(NA)				
35318 92	900 gross hp. and over		(NA)				
35318 93	Other truck type tractor chassis, used for log hauling, oil fields, desert, and other uses		(NA)	[23]2,544	[23]99.8		
	Off-highway trailers and wagons (end, side, and bottom dump):						
35318 94	Under 90 tons capacity		(NA)	141	10.1	205	13.1
35318 95	90 tons through 129 tons capacity		(NA)				
35318 96	130 tons capacity and over	Number	(NA)				
35319 --	Other construction machinery and equipment, including other construction machinery parts		(NA)	(X)	[24]2,002.2	(X)	913.0
35319 06	Commercial brush, limb, and log chippers for waste wood reduction	Thousands	2	([25])	([25])	([26])	([26])
35319 07	Log splitters	Thousands	6	**15.6	8.6	([26])	([26])
35319 11	Dredging machinery, hydraulic and other types		6	(X)	52.3	(X)	21.1
	Self-propelled continuous ditchers and trenchers, including ladder and wheel types (integral units only):						
35319 20	As reported in the census of manufactures		9	(X)	85.4	(X)	[27]123.7
	As reported in Current Industrial Reports MQ-35D, Construction Machinery		(NA)	11,051	85.1	(X)	126.6
	Ladder type digging elements	Number	(NA)	10,822	72.8	13,420	56.5
35319 14	Under 2,000 lb. gross weight		(NA)			11,110	35.2
35319 15	2,000 to 4,999 lb. gross weight		(NA)	10,822	72.8		
35319 17	5,000 lb. gross weight and over		(NA)			2,310	21.4
35319 18	Wheel type digging element	Number	(NA)	229	12.3	212	6.8
35319 21	Railway maintenance-of-way equipment (rail layers, ballast spreaders, etc.), except railcars		13	(X)	96.9	(X)	35.4
35319 23	Horizontal and vertical earth augers and power post hole diggers, excluding water well and blast hole drills	Thousands	16	(S)	17.6	(X)	32.1
	Portable surface type water well and blast hole drills, crawler mounted, and truck or wheel mounted:						
35319 30	As reported in the census of manufactures		(NA)	([28])	([28])	([27])	([27])
	As reported in Current Industrial Reports MQ-35D, Construction Machinery		(NA)	([28])	([28])	702	39.8
35319 52	Winches, including winches for marine use, excluding winches for mounting on wheel or tracklaying tractors		30	(X)	103.6	(X)	76.3

See footnotes at end of table.

Table 6a. Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972 — Con.

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation see appendix A, Value of shipments)

1977 product code	Product	Unit of measure	1977			1972	
			Number of companies with shipments of $100,000 or more	Product shipments[1]		Product shipments	
				Quantity[2]	Value (million dollars)	Quantity	Value (million dollars)
	CONSTRUCTION MACHINERY--Con.						
35319 --	Other construction machinery and equipment, including other construction machinery parts--Con.						
	Portable crushing plants, screening plants, washing plants, and combination plants:						
35319 70	As reported in the census of manufactures	.....	18	(X)	51.0	([27])	([27])
	As reported in Current Industrial Reports MQ-35D, Construction Machinery:						
35319 73	Under 150 tons per hour	Number	(NA)	213	19.2	54	2.5
35319 75	150 tons per hour and over	Number	(NA)	257	34.2	217	21.0
35319 71	Hand-held compaction equipment, including tampers, upright and vibratory compactors, etc	Thousands	12	*33.8	24.4	234	15.1
35319 81	Snow clearing attachments for mounting on tractors or trucks, including rotary snow plows, V-shaped snow plows, single blades and wings, and snow blowers	Thousands	30	(S)	66.9	(X)	40.1
35319 83	Other excavating and road construction machinery	.....	33	(X)	96.0	(X)	[29]124.7
	Parts and attachments for construction machinery and equipment, except parts and attachments for power cranes, draglines, shovels, and tractors:						
35319 84	Sold to plants producing construction machinery and equipment	.....	57	(X)	381.9	(X)	82.7
35319 86	For replacement and repair	.....	107	(X)	713.2	(X)	247.0
35319 98	All other construction machinery and equipment, complete units, including well point systems, derricks except oil and gas well, gallows, frames, ginpoles, stiff legs, and guys	Thousands	76	(X)	[25]263.1	(X)	[26]91.7
35319 00	Other construction machinery and equipment, including parts, n.s.k.	.....	(NA)	(X)	41.3	(X)	23.1
35310 00	Construction machinery, n.s.k., typically for establishments with 5 employees or more (see note)	.....	(NA)	(X)	178.2	(X)	91.8
35310 02	Construction machinery, n.s.k., typically for establishments with less than 5 employees (see note)	.....	(NA)	(X)	126.9	(X)	25.9
	MINING MACHINERY						
3532- --	Total	.....	(NA)	(X)	1,785.6	(X)	729.8
35325 --	Undergound mining machinery:						
	As reported in census of manufactures	.....	48	(X)	432.1	(X)	[30]168.5
	As reported in Current Industrial Reports MA-35F, Mining Machinery and Equipment	.....	(NA)	(X)	440.3	(X)	123.9
	Cutting machines:						
35325 14	Shortwall and universal	Number	(NA)	([31])	([31])		
35325 47	Augers, coal recovery		(NA)	([32])	([32])		
	Longwall mining machines, coal type:						
35325 16	Plows		-	-	-		
35325 18	Shearer or cutter loader		(NA)	([31])	([31])	719	40.2
	Loading machines, underground mine:						
	Gathering arm type:						
35325 32	Coal		(NA)	([31])	([31])		
35325 34	Other than coal		(NA)				
35325 36	Shovel type, including scoops and slusher hoists		(NA)	(S)	[31]109.5		
	Continuous mining machines, borer and ripper:						
35325 41	Coal		(NA)	523	140.7	299	48.4
35325 42	Other than coal		(NA)				
	Shuttle cars, rubber-tired, self-propelled:						
35325 71	Coal		(NA)	([32])	([32])	3,884	35.3
35325 74	Other than coal		(NA)				
35325 75	Mine cars, track		(NA)	2,326	17.5		
35325 76	Roof bolters		(NA)	558	23.3	([33])	([33])
35325 77	Rock dusters		(NA)	244	2.5	([33])	([33])
35325 78	Breakers, mounted, including air and hydraulic		-	-	-	([33])	([33])
35325 72	Tractors and trucks, battery powered, rubber tired, 2 and 4 wheel, including self-propelled personnel carriers		(NA)	([32])	([32])	([33])	([33])
35325 73	Mine trailers, all types, including supply, personnel, haulage, tank, lubrication, etc		(NA)	([32])	([32])	([33])	([33])
35325 79	Other underground mining machinery, n.e.c., except parts	Number	(NA)	(S)	[32]146.9	([33])	([33])

See footnotes at end of table.

				Quantity[2]	Value (million dollars)	Quantity	Value (million dollars)
	MINING MACHINERY--Con.						
35326 --	Mineral classifying, flotation, separating, concentrating, cleaning, clarifying, and related equipment:						
	As reported in census of manufactures	.....	27	(X)	100.9	(X)	([30])
	As reported in Current Industrial Reports MA-35F, Mining Machinery and Equipment	.....	(NA)	(X)	92.2	(X)	32.2
35326 52	Flotation machines (quantity represents number of cells)	Number	(NA)	967	8.8	578	1.9
35326 53	Dense medium vessels		(NA)	30	2.4	([34])	([34])
35326 54	Jigs		(NA)	137	3.9	145	2.2
35326 55	Concentrating tables		(NA)				
35326 56	Classifiers (sizing, washing, and dewatering), excluding cyclones		(NA)	565	12.0	405	4.8
35326 57	Wet cyclones, including heavy medium cyclones		(NA)	2,632	4.6	1,029	1.1
35326 58	Centrifuges		(NA)	310	12.7	([34])	([34])
35326 59	Centrifugal drivers		(NA)			101	1.8
35326 61	Scrubbers, all types, including drums, log washers, attritioning machines, etc		(NA)	47	1.6	84	1.4
35326 62	Thermal dryers		(NA)	51	3.6	38	3.0
35326 63	Spirals, concentrating		(NA)			([34])	([34])
35326 64	Thickeners, excluding wet cyclones	Number	(NA)	(S)	13.6	([34])	([34])
35326 65	Filters	Square feet	(NA)			([34])	([34])
35326 66	Feeders, apron, vibrating, reciprocating	Number	(NA)	1,172	17.5	1,301	10.0
35326 67	Magnetic separators	No. of drums	(NA)	158	2.5	283	1.5
35326 69	Other mineral classifying, flotation, separating, concentrating, cleaning, clarifying, and related equipment, n.e.c	Number	(NA)	(S)	8.9	(X)	[34]4.4
35327 --	Crushing, pulverizing, and screening machinery:						
	As reported in the census of manufactures	.....	40	(X)	181.9	(X)	101.3
	As reported in Current Industrial Reports MA-35F, Mining Machinery and Equipment	.....	(NA)	(X)	193.1	(X)	96.3
	Crushers, stationary types, including crushers mounted on skids:						
	Gyratory:						
35327 10	Cone type	Number	(NA)	392	35.6	469	20.6
35327 12	Other		(NA)				
35327 13	Impact		(NA)	741	24.7	554	11.7
35327 17	Jaw		(NA)	248	9.3	254	4.2
35327 19	Roll		(NA)	549	33.9	533	11.7
	Grinding mills:						
35327 33	Ball, including pebble mills		(NA)	158	53.9	168	11.0
35327 37	Rod		(NA)	18	.9	5	.5
35327 55	Screens, vibrating, trommel, mine type	Number	(NA)	3,687	33.8	4,240	36.6
35327 59	Other crushing, pulverizing, and screening machinery, n.e.c	.....	(NA)	(X)	1.1	(X)	-
35328 --	All other complete mining machinery and equipment, including all rock drills:						
	As reported in census of manufactures	.....	30	(X)	120.5	(X)	93.5
	As reported in Current Industrial Reports MA-35F, Mining Machinery and Equipment	.....	(NA)	(X)	125.7	(X)	92.1
35328 23	Rock drills (percussion type), including stopers, drifters, and air leg drills	Number	(NA)	[35]8,294	[35]40.0	[36]10,024	[36]25.6
35328 13	Core drills, mineral exploration		(NA)	700	8.9		
35328 43	Rotary drills, underground (coal and roof)		(NA)	([35])	([35])	500	11.1
35328 96	Powered roof supports for longwall mining	Number	(NA)	979	15.8		
35328 98	All other mining machinery and equipment, except parts, n.e.c	.....	(NA)	(X)	[35]61.0	(S)	[37]55.3
35329 --	Parts and attachments for mining machinery and equipment	.....	(NA)	(X)	841.4	(X)	331.1
	Percussion rock drill bits:						
35329 31	Containing tungsten carbide	Millions	17	(S)	110.5	(X)	38.7
35329 35	Made entirely of steel	Millions	2			(X)	6.6
35329 41	Other drill bits, tools, and supplies for drills (sold separately)	Thousands	23	(S)	128.8	(X)	[36]77.0
35329 75	Parts and attachments for mining machinery and equipment, sold separately, excluding drills	.....	85	(X)	597.6	(X)	194.5
35329 00	Parts and attachments for mining machinery and equipment, n.s.k	.....	(X)	(X)	4.4	(X)	14.3
35320 00	Mining machinery, n.s.k., typically for establishments with 5 employees or more (see note)	.....	(X)	(X)	63.8	(X)	30.0
35320 02	Mining machinery, n.s.k., typically for establishments with less than 5 employees (see note)	.....	(X)	(X)	45.0	(X)	5.4

See footnotes at end of table.

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in codes ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

[1]Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figures is replaced by (S).

[3]For 1977, data for wheel tractors for use as a towing unit included rubber-tired dozers.

[4]Totals include value of products withheld to avoid disclosing operations of individual companies.

[5]For 1972, product class 35314 total, as reported in census of manufactures, included $8.2 million not specified by kind.

[6]For 1972, product class 35314 total, as reported in CIR MA-35D, excluded product codes 35314 81 through 35314 92, since they were collected only in census of manufactures.

[7]For 1972, quantity and value totals for excavators excluded product codes 35314 61 and 35314 53.

[8]For 1972, both totals for excavators and product code 35314 23 excluded data for over 1 cu. yd. capacity hydraulic operated truck or wheel (rubber mounted) excavators.

[9]For 1972, quantity and value totals for cranes excluded product code 35314 30.

[10]For 1972, product class 35316 total, as reported in census of manufactures, included $6.3 million for other products, such as aggregate spreaders and soil stabilization pavers and $5.1 million for mixers, pavers, and related equipment, excluding parts not specified by kind.

[11]For 1972, product class 35316 total, as reported in CIR MQ-35D, excluded data for product codes 35316 12, 35316 31, 35316 34, and 35316 38, since they were collected only in census of manufactures.

[12]For 1977, product codes 35316 12, 35316 25, 35316 31, and 35316 38 were combined to avoid disclosing operations of individual companies.

[13]For 1972, product codes 35316 17, 35316 18, 35316 19, 35316 20, and 35316 23 were not collected separately.

[14]For 1972, CIR MA-35D included front engine mount, integral design tractor shovel loaders/backhoes at an undisclosed value.

Footnotes are continued on next page.

[15]For 1977, product codes 35317 03, 35317 04, 35317 11, and 35317 12 were combined to avoid disclosing operations of individual companies.
[16]For 1972, product code 35317 30 was not collected separately.
[17]For 1972, product code 35318 00, as reported in CIR MQ-35D, included $0.4 million for all other rollers.
[18]Excludes value of prime mover when sold with machine.
[19]For 1972, data included cable and hydraulic power control units of an undisclosed amount.
[20]Excludes loaders shipped for mounting on tracklaying type shovel loaders, integral unit.
[21]For 1977, product codes 35318 88, 35318 89, and 35318 91 were combined to avoid disclosing operations of individual companies.
[22]For 1972, product codes 35318 90 and 35318 91 were not collected separately.
[23]For 1977, product codes 35318 84 and 35318 93 were combined to avoid disclosing operations of individual companies.
[24]For 1977, portable surface type water well and blast hole drills were included in Industry 3533, Oil Field Machinery, in product code 35334 16 at a total value of $235.1 million.
[25]For 1977, product code 35319 06 was combined with product code 35319 98 to avoid disclosing operations of individual companies.
[26]For 1972, product codes 35319 06 and 35319 07 were included with product code 35319 98.
[27]For 1972, product code 35319 20, as reported in census of manufactures, included product codes 35319 30 and 35319 70.
[28]For 1977, CIR MQ-35D included portable water well and blast hole drills in product class 35319 at a value of $213.5 million. However, these products are properly classified in Industry 3533, Oil Field Machinery.
[29]For 1972, product code 35319 83 included well point systems.
[30]For 1972, product classes 35325 and 35326 as reported in census of manufactures were combined.
[31]For 1977, product codes 35325 14, 35325 18, 35325 32 and 35325 34 were combined with product code 35325 38 to avoid disclosing operations of individual companies.
[32]For 1977, product codes 35325 47, 35325 71, 35325 72, 35325 73, and 35325 74 were combined with product code 35325 79.
[33]For 1972, product codes 35325 76, 35325 77, 35325 78, 35325 72, 35325 73, and 35325 79 were not collected separately.
[34]For 1972, product codes 35326 53, 35326 58, 35326 63, 35326 64, and 35326 65 were included with product code 35326 69.
[35]For 1977, rubber-tired rock drills (percussion type) and product code 35328 43 were combined with code 35328 98.
[36]For 1972, construction rock drills with 12.2 thousand units valued at $17.7 million were included with product code 35329 41.
[37]For 1972, product code 35328 98 included surface (blast hole) rotary drills, whose quantity was 211 units, value at $27.7 million. For 1977, these drills were included in Industry 3533, Oil Field Machinery.
[38]For 1977, data for product codes 35331 42 and 35331 49 were combined to avoid disclosing operations of individual companies.
[39]For 1972, data for product codes 35331 43 and 35331 49 were combined to avoid disclosing operations of individual companies.
[40]For 1977 and 1972, data for product codes 35332 31 and 35332 98 were combined to avoid disclosing operations of individual companies.
[41]For 1972, data for product codes 35333 53 and 35333 98 were combined to avoid disclosing operations of individual companies.
[42]For 1977, data for product codes 35333 55 and 35333 98 were combined to avoid disclosing operations of individual companies.
[43]For 1972, data for portable water well and blast hole drilling rigs were also contained in Industry 3531, Construction Machinery, under product code 35319 30 at an undisclosed amount.
[44]For 1977, product codes 35355 41 and 35355 45 were combined to avoid disclosing operations of individual companies.
[45]For 1972, product code 35361 14 was combined with product code 35361 38 to avoid disclosing operations of individual companies.
[46]For 1972, product code 35362 57 was combined with product code 35362 41 to avoid disclosing operations of individual companies.
[47]For 1977, product code 35371 27 was included with product code 35371 43 to avoid disclosing operations of individual companies.
[48]For 1972, product code 35371 48 was included with product code 35371 98.
[49]For 1977, product codes 35371 51 and 35371 71 were included with product code 35371 98 to avoid disclosing operations of individual companies.
[50]For 1972, product codes 35371 55, 35371 81, 35371 83, and 35371 85 were included with product class 35372 total.

Table 6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

Product class and geographic area	Value of product shipments	
	1977	1972
35311, WHEEL TRACTORS, CONTRACTORS' OFF HIGHWAY		
United States	453.6	251.5

Note: For 1972, the following value ranges (in million dollars) substitute for actual figures withheld to avoid disclosing operations of individual companies: AA--$1.0 to $1.9; BB--$2.0 to $4.9; CC--$5.0 to $9.9; EE-- $10.0 to $19.9; FF--$20.0 to $49.9; GG--$50.0 or more.

(NA) Not available. N.E.C. Not elsewhere classified.

[1]For 1972, data for portable water well and blast hole drilling rigs were contained in either product class 35319 or product class 35334. For 1977, data for these rigs were contained in product class 35334 only.

[2]For 1972, product classes 35325 and 35326 as reported in the census of manufactures were combined.

Table 6c. Product Classes—Value Shipped by All Producers: 1963, 1967, and 1972 to 1977

(Millions of dollars)

35372	Parts for industrial trucks and tractors	378.2	372.3	308.3	330.7	244.9	171.4	(NA)	(NA)
35370	Industrial trucks and tractors, n.s.k.	187.9	(S)	(45.2)	(44.6)	94.7	103.9	(NA)	(NA)

(NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

[2]For 1976 and prior years, data for portable water well and blast hole drilling rigs were contained in either product class 35319 or 35334. For 1977, data for these rigs were contained in product class 35334 only.

[3]For 1976 and prior years, data for product classes 35353 and 35355 were combined.

[4]For 1976 and prior years, data for product classes 35354 and 35356 were combined.

[5]Individual product codes included in this product class for 1972 differ from 1967 definition. Products shifting into or out of this product class represent approximately 10 percent of total 1967 shipments at U.S. level.

[6]For 1972 and later years, data for automatic stacking machines and parts and attachments for automatic stacking machines were included in product class 35362. Prior to 1972, data for these products were included in industry 3537 and were not available separately.

Table 7. Materials Consumed by Kind: 1977 and 1972

(Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation see appendix A, Cost of materials)

1977 material code	Material	Unit of measure	1977 Quantity[1]	1977 Delivered cost (million dollars)	1972 Quantity	1972 Delivered cost (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than $50,000 or less than half the unit of measure specified.

[1]For some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]For 1972, material codes 339915 and 356601 were included in material code 970099.

[3]From 1972 Census of Manufactures Supplemental Inquiry: Consumption of Materials, Parts, Containers, and Supplies During 1972 (Form MA-131).

[4]For 1972, material code 356101 was included with material code 356301.

[5]Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

[6]For 1972, material codes 339915, 349401, 356601, 307902, 346901, 344001, and 349012 were included in material code 970099.

[7]For 1972, material codes 339915, 362101, and 349401 were included in material code 970099.

[8]For 1972, material codes 369101 and 360101 were included with material code 970099.

[9]For 1972, material codes 339915, 349401, and 356101 were included in material code 970099.

[10]For 1977, material code 362115 was included with material code 362120 to avoid disclosing operations of individual companies.

[11]For 1977, material code 360101 was included with material code 970099.

DESCRIPTION OF INDUSTRIES

METALWORKING MACHINERY AND EQUIPMENT

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code	Title
3541	Machine Tools, Metal Cutting Types
3542	Machine Tools, Metal Forming Types
3544	Special Dies, Tools, Jigs, and Fixtures
3545	Machine Tool Accessories
3546	Power Driven Hand Tools
3547	Rolling Mill Machinery
3549	Metalworking Machinery, N.E.C.

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 3541, MACHINE TOOLS, METAL CUTTING TYPES

This industry comprises establishments primarily engaged in the manufacture of machines, not supported in the hands of an operator when in use, that shape metal by cutting or use of electrical techniques; the rebuilding of such machine tools; and the manufacture of replacement parts for them. Metalworking, or primarily metalworking, machine tools designed primarily for home workshops are also included. Establishments primarily engaged in the manufacture of electric welding equipment are classified in industry 3623; portable power driven hand tools in industry 3546; and gas welding and cutting equipment and automotive maintenance equipment in industry 3549.

The total value of shipments for establishments classified in the Machine Tools, Metal Cutting Types, industry amounted to $2,813 million in 1977, an increase of 98 percent from 1972. The value of shipments of products classified as primary to the industry was $2,561 million, an increase of 103 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were lathes for which shipments increased 131 percent, and grinding and polishing machines (excluding gear tooth grinding, lapping, polishing, and buffing machines), for which shipments increased 71 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $1,866 million in 1977, was 107 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 59.4 thousand employees, an increase of 13 percent from 1972. The leading States in employment were Ohio, Michigan, Illinois, and New York, accounting for approximately 60 percent of the industry's 1977 employment. These same States were in the forefront for 1972 when they accounted for approximately 60 percent of the industry's employment.

The 1977 census obtained data on shipments of most types of metal cutting machine tools only at product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of most types of metal cutting machine tools are reported quarterly in the Census Bureau's Current Industrial Reports (CIR) MQ-35W, Metalworking Machinery. Some of these data are also shown in table 6a.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 4 percent of total value of shipments.

INDUSTRY 3542, MACHINE TOOLS, METAL FORMING TYPES

This industry comprises establishments primarily engaged in the manufacture of machines, not supported in the hands of an operator while in use, for pressing, hammering, extruding,

shearing, die casting, or otherwise forming metal into shape. This industry also includes rebuilding such machine tools and manufacturing repair parts for them. Establishments primarily engaged in the manufacture of electric welding equipment are classified in industry 3623, portable power driven hand tools in industry 3546; rolling mill machinery and equipment in industry 3547, and gas welding and cutting equipment and automotive maintenance equipment in industry 3549.

The total value of shipments for establishments classified in the Machine Tools, Metal Forming Types industry amounted to $1,131 million in 1977, an increase of 62 percent from 1972. The value of shipments of products classified as primary to the industry was $1,115 million, an increase of 66 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were punching, shearing, bending, and forming machines, for which shipments increased 83 percent, and metalworking presses (including forging and manual presses), for which shipments increased 54 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $722 million in 1977, was 73 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 23.7 thousand employees, a decrease of 2 percent from 1972. The leading States in employment were Illinois, Ohio, New York, and Michigan, accounting for approximately 65 percent of the industry's 1977 employment. These same States were in the forefront for 1972 when they accounted for approximately 65 percent of the industry's employment although there has been some shift in the relative importance of individual States.

The 1977 census obtained data on shipments of most types of metal forming machine tools only at product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of most types of metal forming machine tools are reported quarterly in the Census Bureau's Current Industrial Reports (CIR) MQ-35W, Metalworking Machinery. Some of these data are also shown in table 6a.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 6 percent of total value of shipments.

INDUSTRY 3544, SPECIAL DIES, TOOLS, JIGS, AND FIXTURES

This industry includes establishments commonly known as contract tool and die shops and primarily engaged in manufacturing, on a job or order basis, special tools and fixtures for use with machine tools, hammers, die casting machines, and presses. The products of establishments classified in this industry include a wide variety of special toolings, such as dies; punches; die sets and components, and subpresses; jigs and fixtures; and special checking devices. Establishments primarily engaged in the manufacture of molds for die casting and foundry casting; metal molds for plaster working, rubber working, plastics working, glass working, and similar machinery are also included. Establishments primarily engaged in the manufacture of molds for heavy steel ingots are classified in industry 3321.

The total value of shipments for establishments classified in the Special Dies, Tools, Jigs, and Fixtures industry amounted to $3,905 million in 1977, an increase of 61 percent from 1972. The value of shipments of products classified as primary to the industry was $4,450 million, an increase of 64 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were stamping dies (including lamination and blanking dies), for which shipments increased 94 percent, and jigs and fixtures, for which shipments increased 89 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $2,790 million in 1977, was 55 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 105.7 thousand employees, an increase of 8 percent from 1972. The leading States in employment were Michigan, Ohio, Illinois, and Pennsylvania, accounting for approximately 55 percent of the industry's 1977 employment. These same States were in the forefront for 1972 when they accounted for approximately 55 percent of the industry's employment.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 14 percent of total value of shipments.

INDUSTRY 3545, MACHINE TOOL ACCESSORIES

This industry comprises establishments primarily engaged in the manufacture of cutting tools, machinists' precision measuring tools, and tools for other metalworking machinery, not elsewhere classified. Establishments primarily engaged in the manufacture of hand tools, except power driven types, are classified in industry group 342.

The total value of shipments for establishments classified in the Machine Tool Accessories industry amounted to $2,383 million in 1977, an increase of 92 percent from 1972. The value of shipments of products classified as primary to the industry was $2,239 million, an increase of 94 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of

this change were indexible and throwaway inserts, for which shipments increased 112 percent, and carbon steel and high speed steel twist drills (excluding combined drills, countersinks, and gun drills), for which shipments increased 90 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $1,585 million in 1977, was 81 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 54.0 thousand employees, an increase of 16 percent from 1972. The leading States in employment were Michigan, Ohio, Massachusetts, and Illinois, accounting for approximately 60 percent of the industry's 1977 employment. These same States were in the forefront for 1972 when they accounted for approximately 60 percent of the industry's employment.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 5 percent of total value of shipments.

INDUSTRY 3546, POWER DRIVEN HAND TOOLS

This industry comprises establishments primarily engaged in the manufacture of power driven hand tools, such as drills and drilling tools, pneumatic and snagging grinders, and electric hammers. Establishments primarily engaged in the manufacture of automotive maintenance equipment are classified in industry 3549; those primarily manufacturing machine tools for metal cutting and metal forming (including home workshop tools) which are not supported in the hands of an operator are classified in industries 3541 and 3542; and those primarily manufacturing power driven heavy construction or mining hand tools in industry group 353.

Plants primarily engaged in the manufacture of chain saws are tabulated in the Power Driven Hand Tools industry for the first time. In prior years, they were tabulated in Industry 3553, Woodworking Machinery. These establishments had 5.7 thousand employees and industry shipments valued at $431 million in 1977.

The total value of shipments for establishments classified in the Power Driven Hand Tools industry amounted to $1,623 million in 1977. The value of shipments of products classified as primary to the industry was $1,497 million. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture was $932 million in 1977. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 27.7 thousand employees. The leading States in employment were South Carolina, Illinois, Maryland, and North Carolina, accounting for approximately 40 percent of the industry's 1977 employment. Data for South Carolina, Maryland, and North Carolina have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3547, ROLLING MILL MACHINERY

This industry comprises establishments primarily engaged in the manufacture of rolling mill machinery and processing equipment for metal production, such as cold forming mills, structural mills, and finishing equipment.

The total value of shipments for establishments classified in the Rolling Mill Machinery industry amounted to $507 million in 1977, an increase of 55 percent from 1972. The value of shipments of products classified as primary to the industry was $361 million, an increase of 46 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were tube mill machinery, for which shipments increased 190 percent, and hot plate rolling mill machinery (except tin plate machinery), for which shipments increased 195 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $287 million in 1977, was 39 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 7.9 thousand employees, a decrease of 24 percent from 1972. The leading States in employment were Pennsylvania, Ohio, and Massachusetts, accounting for approximately 80 percent of the industry's 1977 employment. Data for Massachusetts have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

The establishments in this industry with less than 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 3 percent of total value of shipments.

INDUSTRY 3549, METALWORKING MACHINERY, N.E.C.

This industry comprises establishments primarily engaged in the manufacture of metalworking machinery, not elsewhere classified, such as gas cutting and welding equipment, wire fabricating machinery and equipment, except wire drawing dies, and

automotive maintenance machinery and equipment. Establishments primarily engaged in the manufacture of metal cutting machine tools are classified in industry 3541, metal forming machine tools, in industry 3542, power driven hand tools, in industry 3546, and rolling mill machinery in industry 3547.

The total value of shipments for establishments classified in the Metalworking Machinery, N.E.C. industry amounted to $917 million in 1977, an increase of 115 percent from 1972. The value of shipments of products classified as primary to the industry was $909 million, an increase of 121 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were welding and cutting apparatus (except electric), for which shipments increased 128 percent, and assembly machines for which shipments increased 139 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $562 million in 1977, was 110 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 19.4 thousand employees, an increase of 43 percent from 1972. The leading States in employment were Illinois, Ohio, New York, and New Jersey, accounting for approximately 35 percent of the industry's 1977 employment. Data for Illinois have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided. This represents a shift from 1972 when Ohio, Michigan, New York, and Pennsylvania accounted for approximately 40 percent of the industry's employment.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 4 percent of total value of shipments.

Table 1a. Historical Statistics for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year[1]	Companies[2] (no.)	All establishments		All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Expenditures and assets		End-of-year inventories (million dollars)	Ratios	
		Total (no.)	With 20 employees or more (no.)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)				New capital expenditures (million dollars)	Gross value of fixed assets (million dollars)		Specialization (percent)	Coverage (percent)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. r Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

1972 Census..	71	88	65	23.1	202.3	16.9	32.9	124.2	434.5	302.7	730.5	20.3	225.1	199.7	82	92

Note: For 1977, content of industry was changed to include chain saws. Prior to 1977, chain saws were included in Industry 3553, Woodworking Machinery. 1977 data in table 1C exclude chain saw plants in order to present figures comparable with historic data of industry.
(NA) Not available.
[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the industry chapter.

Table 2. Industry Statistics by Geographic Area: 1977 and 1972

[For explanation of terms, see appendix A]

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies (NA) Not available n e c Not elsewhere classified (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. **Summary Statistics for the Industry: 1977**

[For explanation of terms, see appendix A]

Item	Unit of measure	Machine tools, metal cutting types (SIC 3541)	Machine tools, metal forming types (SIC 3542)	Special dies, tools, jigs, and fixtures (SIC 3544)	Machine tool accessories (SIC 3545)	Power driven hand tools (SIC 3546)	Rolling mill machinery (SIC 3547)	Metalworking machinery, n.e.c. (SIC 3549)
Primary product specialization ratio[1]	percent	87	90	94	89	91	78	88
Coverage ratio[2]	do	92	87	79	88	90	86	82
All establishments	number	917	426	7 153	1 411	124	63	534
With 1 to 19 employees	do	611	263	5 726	920	53	25	351

Used capital expenditures	do	4.8	2.0	24.3	9.9	0.6	3.3	2.3

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977—Con.

(For explanation of terms, see appendix A. For description of annual survey of manufactures (ASM), see appendic B)

Item	Power driven hand tools (SIC 3546)		Rolling mill machinery (SIC 3547)		Metalworking machinery, n.e.c. (SIC 3549)	
	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)
Purchased services:						
Cost of purchased services for repair of--						
Buildings and other structures	1.0	10	0.4	10	1.4	10
Response coverage ratio[2] (percent)	24	(X)	56	(X)	68	(X)
Machinery	2.8	13	2.0	9	(2.5)	18
Response coverage ratio[2] (percent)	24	(X)	56	(X)	65	(X)
Cost of purchased communication services	3.7	8	(1.4)	21	3.3	14
Response coverage ratio[2] (percent)	63	(X)	75	(X)	57	(X)
Rental payments	8.1	3	(1.8)	17	6.0	9
Buildings and other structures	1.8	4	(0.7)	47	3.3	12
Machinery and equipment	6.3	4	1.1	7	2.7	9
Supplemental labor costs	67.2	1	38.2	3	40.3	3
Legal costs	26.9	1	10.0	3	20.6	2
Voluntary costs	40.3	2	28.3	5	19.7	6
Gross value of depreciable assets:						
Buildings and other structures:						
Beginning of year	91.1	3	54.9	7	92.1	5
New capital expenditures	7.2	2	(1.1)	53	(6.1)	17
Used capital expenditures	-	(X)	0.1	5	-	(X)
Retirements	0.6	7	(0.1)	(A)	(1.0)	15
End of year	97.7	2	56.1	7	97.2	5
Machinery and equipment:						
Beginning of year	267.1	1	170.1	4	164.0	6
New capital expenditures	31.2	2	(9.1)	17	15.6	9
Automobiles, trucks, etc., for highway use[3]	(D)	(A)	(D)	(A)	(0.9)	(A)
Computers and peripheral data processing equipment[3]	(D)	(A)	(D)	(A)	(0.2)	(A)
All other[3]	(D)	71	(D)	(A)	(10.3)	(A)
New machinery and equipment, n.s.k.[4]	(2.8)	(A)	(1.7)	(A)	(4.1)	(A)
Used capital expenditures	0.6	4	(4.4)	48	0.4	12
Retirements	12.8	1	3.3	13	(15.9)	54
End of year	286.0	1	180.2	4	164.1	4
Total gross value of depreciable assets:						
Beginning of year	358.2	1	225.0	5	256.1	4
New capital expenditures	38.4	2	(10.2)	21	21.6	10
Used capital expenditures	0.6	6	(4.5)	47	0.4	11
Retirements	13.4	1	(3.3)	15	(16.9)	51
End of year	383.8	1	236.3	4	261.3	4
Depreciation charges during 1977	25.5	3	8.5	4	16.7	3
Buildings and other structures	3.8	6	1.7	12	4.4	7
Machinery and equipment	21.7	3	6.8	4	12.3	3

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

[For explanation of terms, see appendix A]

Industry and employment size class	E[1]	All establishments (no.)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)	End-of-year inventories (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

Covered by administrative records[2]	E0	103	0.3	3.7	0.2	0.4	2.0	6.7	5.9	12.6	0.4	3.4

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

See footnotes at end of table.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977—Con.

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)				
3547	**Rolling mill machinery:**										
	Entire industry	63	7.9	128.2	5.4	10.4	78.4	286.9	198.3	507.4	9.1

35493	Welding and cutting apparatus, except electric:										
	Establishments with this product class primary	36	3.9	48.8	2.7	5.1	27.8	114.5	89.0	196.0	7.1
	Establishments with 75 percent specialization or more in class	31	3.7	44.6	2.6	4.8	26.2	105.8	82.5	181.4	(D)
35494	Automotive maintenance equipment:										
	Establishments with this product class primary	40	3.5	52.0	2.1	3.8	22.1	110.9	64.2	173.2	5.3
	Establishments with 75 percent specialization or more in class	31	2.7	42.1	1.7	3.1	17.8	88.1	52.5	138.8	4.6
35495	Other metalworking machinery:										
	Establishments with this product class primary	191	5.9	83.9	3.7	7.2	44.7	160.1	121.7	276.7	7.4
	Establishments with 75 percent specialization or more in class	136	4.4	63.6	2.7	5.3	33.4	122.0	93.8	212.4	5.0

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. **Industry-Product Analysis — Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967**

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. n.e.c. Not elsewhere classified.
[1]Excludes plants primarily engaged in the manufacture of chain saws. See tables 1a and 1c.
[2]In 1972, industries 3546, 3547, and 3549 were established as separate industries. For 1967, data were not available.

Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

Table 5c. **Industry-Product Analysis — Shipments by Product Class and Industry: 1977** – Con.

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

1977 product code	Product	1977		1972
		Number of companies with shipments of $100,000 or more	Value of product shipments[1] (million dollars)	Value of product shipments (million dollars)
	MACHINE TOOL ACCESSORIES			
3545- --	Total	(NA)	2,238.9	1,151.4
35451 --	Small cutting tools for machine tools and metalworking machinery	(NA)	1,376.4	738.0
	Broaches, excluding holders and burnishing bars:			
35451 13	High speed steel	22	43.3	34.6
35451 15	Carbide, or special cast alloy, etc.	3	3.2	4.3
	Twist drills, excluding combined drills, countersinks, and gun drills:			
	Carbon steel and high speed steel:			
35451 16	1/2 inch and under diameter, taper shank	12	16.2	97.9
35451 17	1/2 inch and under diameter, straight shank	20	123.0	
35451 18	Over 1/2 inch diameter, taper shank	14	17.0	
35451 19	Over 1/2 inch diameter, straight shank	16	29.8	
35451 24	Carbide, solid and tipped, excluding tips and blanks sold separately and masonry drills	25	24.6	22.3
35451 22	Masonry drill bits	10	6.6	
35451 25	Gun drills and gun reamers	11	13.7	7.2
35451 26	Combination drills and countersinks	8	8.3	4.3
35451 27	Countersinks, including port cutters, etc., but excluding combined drills and countersinks and pilots for interchangeable pilot types	13	6.2	5.6
35451 29	Counterbores, including spot facers, etc., but excluding pilots for interchangeable pilot types	24	17.5	9.6
	Reamers, all types, excluding gun reamers:			
35451 31	Carbon steel, including blades sold separately	9	2.4	2.8
35451 33	High speed steel, including blades sold separately	26	20.6	17.1
35451 36	Carbide, solid and tipped, including replaceable blades sold separately, but excluding tips and blanks sold separately	26	14.1	11.5
35451 42	Hobs, all types	7	24.9	18.3
35451 47	Gear shaper cutters and gear shaving cutters	9	24.0	4.6
	End mills and milling cutters:			
	End mills, solid and tipped, die sinking contour, router, tracer, hollow mills, etc., excluding inserted blade types and shell mills:			
35451 51	High speed steel	27	64.0	40.2
35451 52	Carbide, solid and tipped, excluding blades sold separately	21	13.8	7.2
	Inserted blade type cutters, all types, complete:			
	Nonindexible:			
35451 43	High speed steel	7	4.7	11.8
35451 44	Carbide	9	10.9	
	Indexible or throwaway insert type:			
35451 48	High speed steel	5	4.0	3.5
35451 49	Carbide	12	14.3	
35451 58	Form relieved cutters, solid and tipped, including high speed steel and carbide	19	14.6	6.6
35451 59	Slitting saws and screw slotting cutters, solid and tipped, including high speed steel and carbide	14	9.3	6.9
	Milling cutters, n.e.c.:			
35451 61	High speed steel	26	46.5	19.0
35451 63	Carbide, solid and tipped, excluding tips and blanks sold separately	15	4.6	5.4

See footnotes at end of table.

Table 6a. **Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972**—Con.

(Includes value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation see appendix A, Value of shipments)

1977 product code	Product	1977		1972
		Number of companies with shipments of $100,000 or more	Value of product shipments[1] (million dollars)	Value of product shipments (million dollars)
	MACHINE TOOL ACCESSORIES--Con.			
35451 --	Small cutting tools for machine tools and metalworking machinery--Con.			
	Single and double point tools:[11]			
35451 65	High speed steel	20	9.4	8.7
35451 66	Carbide, solid and tipped, excluding rough blanks, and tips and blanks sold separately	37	46.6	30.7
35451 68	Other materials	4	5.6	8.1
35451 72	Circular form tools, including semifinished blanks	13	12.9	8.6
	Threading tools:			
	Taps, excluding taps in threading sets and screw plates and inserted chaser types:			
35451 76	Carbon steel	8	5.4	6.0
	High speed steel:			
35451 70	Cut thread	10	8.3	
35451 71	Ground thread	22	97.6	57.9
35451 78	Carbide, solid and tipped	1	.2	
35451 73	Dies, with two or more thread-forming edges integral with the body, including round, square, hexagonal, spring, two-piece, and adjustable types, but excluding inserted chaser types and dies sold in threading sets or screw plates	10	17.4	8.7
35451 75	Chasers, single edge thread cutting, circular blade and tangent types for mounting into or onto holders, die heads, and tap bodies, excluding all die heads, tap bodies, and chaser holders	7	21.6	17.4
	Thread rolling dies, including circular, flat, and planetary:			
35451 74	Titanium carbide and titanium carbide coated	-	21.3	14.7
35451 79	Other	8		
35451 89	Other threading tools, including screw plates and threading sets	7	6.3	2.1
	Blanks, tips, and inserts:[12]			
35451 81	Molded blanks and tips, including carbide, cast alloy, and ceramic, but excluding pressed-to-size inserts	23	71.0	24.9
	Inserts, indexible, and throwaway types:			
	Carbide:			
35451 82	Utility ground	15	45.9	15.0
35451 83	Precision ground	31	130.5	56.7
35451 84	Pressed to size, including inserts with center holes and with molded chip breakers	11	52.9	34.1
35451 85	Other than carbide	3	4.5	4.3
	Inserts, other than indexible and throwaway type:			
35451 86	Carbide	15	38.4	27.1
35451 88	Other than carbide	5		6.1
	Other types of cutting tools for machine tools, n.e.c., including rotary burrs, rotary files, and spade drills:			
35451 92	Carbon steel	15	17.1	2.2
35451 94	High speed steel	36	35.3	13.3
35451 98	Carbide, solid and tipped, excluding tips and blanks sold separately	36	42.4	19.0
35451 00	Small cutting tools for machine tools and metalworking machinery, n.s.k.	(NA)	103.8	31.7
35452 --	Precision measuring tools	(NA)	208.2	94.7
	Inspection, quality control, tool room, and machinists' precision tools:			
35452 11	Comparators, excluding optical	8	13.4	6.2
	Fixed size limit gauges (American Gauge Design type C58-61):			
35452 13	Fixture type	11	9.1	7.0
35452 15	Thread type	14	8.9	4.3
35452 17	Adjustable size limit gauges	6	7.1	5.8
35452 21	Gauge blocks	4	2.3	2.1
35452 61	Dial indicators	6	18.6	11.7
35452 65	Micrometers and calipers	7	17.5	9.0
35452 71	Pneumatic and electronic gauges (manual and automatic)	6	14.8	13.3
35452 91	Coordinate and contour measuring machines	6	28.0	
35452 92	Gear-checking instruments and machines	4	3.8	28.0
35452 93	Metal surface texture measuring machines	-		
35452 98	Other machinists' precision tools, including dividers	24	58.3	
35452 00	Precision measuring tools, n.s.k.	(NA)	26.5	7.3
35453 --	Other attachments and accessories for machine tools and metalworking machinery	(NA)	430.9	218.8
	Tool holders:			
35453 12	Turning tool holders (mechanically clamping for inserts and bits), except box tools and screw machine tool holders	28	47.9	23.6
35453 14	Boring bars and heads	17	29.7	7.0
35453 17	Drilling, reaming, and tapping chucks	6	22.9	([13])
35453 31	Special tooling and attachments for screw and automatic machines (box tools, tool holders, turrets, rollers, etc.), except standard cutting bits and tools	13	13.1	13.8
35453 37	Die heads and tap bodies for chaser type threading and thread-rolling heads, excluding hand type die stocks	4	4.7	
35453 38	Other tool holders, including other chucks, drill heads, tool posts, turrets, sleeves, sockets, etc	27	40.0	[13]25.2

See footnotes at end of table.

35490 02	Metalworking machinery, n.e.c., n.s.k., typically for companies with less than 5 employees (see note)	.....	(NA)	(X)	12.6	(X)	15.1

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or less than half the unit of measure specified.

[1]Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[3]For 1972, product code 35412 52 includes rail or saddle type multiple-spindle drilling machines.

[4]For 1977, product code 35413 12 was included with product code 35413 31 to avoid disclosing operations of individual companies.

[5]For 1977, product code 35413 71 was included with product code 35413 54 to avoid disclosing operations of individual companies.

[6]For 1972, data for thread grinding machines was included with product code 35414 45.

[7]Product classes 35417 and 35418 are shown separately here, but report forms used to collect data coded all products as 35418 products.

[8]For 1977, product code 35418 51 was included with product code 35418 91 to avoid disclosing operations of individual companies.

[9]For 1972, data for pneumatic presses were included with product class 35422 as reported in Current Industrial Reports MQ-35W, Metalworking Machinery, at an undisclosed amount.

[10]For 1972, product code 35422 57 was included with product code 35422 77 to avoid disclosing operations of individual companies.

[11]Single point tools are one-piece single point of multiple point tool bits with integral cutting edges or with cutting tips brazed or bonded to holder or shank; with square, rectangular, round, and other cross-section shanks; and with single and double end, including flat form and dovetail tools used for turning, planing, boring, shaping, shaving, forming, threading, cutting off, etc.; excluding circular form tools, and all mechanical holding devices and replaceable inserts.

Footnotes continued on next page.

[12]Blanks are cast or formed material, unground, and requiring further processing to make a solid tool or cutting tip. (Does not include components pressed to size, as molded ready-to-use inserts.) Tips are a finished or a semifinished form of blank to be brazed, soldered, or otherwise bonded to a shank to form a cutting tool. Inserts are replaceable, mechanically-held cutting-edge components of cutting tools, either pressed to size, or ground on all surfaces (precision ground), or ground on top and bottom only (utility ground).

[13]For 1972, product code 35453 17 was included with product code 35453 38.

[14]For 1972, product codes 35453 41 and 35453 98 were combined to avoid disclosing operations of individual companies.

[15]For 1977, product codes 35453 43 and 35453 98 were combined to avoid disclosing operations of individual companies.

[16]For 1972, hydraulic and internal combustion engine driven hand tools and parts (excluding chain saws and parts) were classified in industry 3546, but not collected separately.

[17]For 1972, chain saws were classified in industry 3553 as product code 35531 67.

[18]For 1977, data for product code 35463 01 are combined with product codes 35463 07, 35463 09, and 35463 19 to avoid disclosing operations of individual companies.

[19]For 1972, product code 35471 11 was combined with product codes 35471 17 and 35471 18 to avoid disclosing operations of individual companies.

[20] For 1972, data for product code 35492 00 are included with product code 35495 00.

[21]For 1972, data for product codes 35493 01, 35493 05, 35493 00, and 35493 15 are included with product code 35493 79.

[22]For 1972, data for product codes 35493 17 and 35493 19 are included with product code 35493 81.

Table 6b. Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

Product class and geographic area	Value of product shipments	
	1977	1972
35411, BORING MACHINES, METAL CUTTING		
United States	93.5	58.7
New England Division:		
Connecticut	3.4	AA

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

[2]For 1967 and later years, diecasting dies (molds) were included in product class 35442. Prior to 1967, these molds were included in product class 35441.

[3]For 1977, chain saws and parts were classified in industry 3546. Prior to 1977, chain saws and parts were classified in industry 3553.

[4]Prior to 1977, hydraulic and internal combustion engine driven hand tools and parts (excluding chain saws and parts) were classified in industry 3546, but not collected separately.

[5]Prior to 1972, product class 35490 included product classes 35460 and 35470.

[6]Prior to 1977, data for product class 35492 were combined with product class 35495.

Table 7. Materials Consumed by Kind: 1977 and 1972

(Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see appendix A, Cost of materials)

Table 7. **Materials Consumed by Kind: 1977 and 1972**—Con.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or less than half the unit of measure specified.

[1]For some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]For 1977, material code 335609 was included with material code 970099 to avoid disclosing operations of individual companies.

[3]For 1972, material codes 335609, 356601, 360101, and 362201 were included with material code 970099.

[4]From 1972 Census of Manufactures Supplemental Inquiry: Consumption of Materials, Parts, Containers, and Supplies During 1972 (Form MA-131).

[5]Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

[6]For 1972, material codes 356601, 360101, and 362201 were included with material code 970099.

[7]For 1972, material codes 335793, 335770, 335609, 356601, 356011, 360101, 329101, and 345001 were combined with material code 970099.

[8]For 1972, material codes 335609, 356601, 356011, and 360101 were included with material code 970099.

[9]For 1972, material code 331015 was included with material code 331019 to avoid disclosing operations of individual companies.

[10]For 1977, material codes 335609, 335793, 362110, 356011, and 360101 were included with material code 970099 to avoid disclosing operations of individual companies.

[11]For 1972, material codes 335609, 335793, and 335770 were included with material codes, 356601, 356011, 360101, 345001, and 970099.

[12]For 1972, material codes 335609, 329101, 356601, 356011, 360101, 345001, 354501, 362201, and 362201 were combined with material code 970099.

[13]For 1977, material code 999811 was combined with material code 970099 to avoid disclosing operations of individual companies.

[14]For 1977, material code 336100 was combined with material code 336200 to avoid disclosing operations of individual companies.

[15]For 1972, material code 362110 was combined with material code 362115 to avoid disclosing operations of individual companies.

[16]For 1977, material code 362115 was combined with material code 362120 to avoid disclosing operations of individual companies.

[17]For 1977, data for material codes 335609, 339915, and 999811 were included with material code 970099 to avoid disclosing figures for individual companies.

[18]For 1972, data for material codes 335609, 329903, and 329101 were included with material code 970099.

Special Industry Machinery, Except Metalworking Machinery

Description of Industries 2

TABLES

INDUSTRY STATISTICS

1a. Historical Statistics: 1977 and Earlier Years 5
1b. Selected Operating Ratios: 1977 and Earlier Years 7
1c. Historical Statistics for Industry 3553, Woodworking Machinery (With Chain Saw Plants): 1977 and Earlier Years 8
2. Geographic Area: 1977 and 1972 9
3a. Summary Statistics: 1977 12
3b. Supplemental Statistics Based on Sample Estimates: 1977 . . . . . 13A
4. Employment Size of Establishment: 1977 14
5a. Industry and Primary Product Class Specialization: 1977 16

PRODUCT STATISTICS

5b. Industry-Product Analysis—Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967 17
5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977 18
6a. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1977 and 1972 20
6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972 . . . 27
6c. Product Classes—Value Shipped by All Producers: 1962, 1967, 1972 to 1977 30

MATERIAL STATISTICS

7. Materials Consumed by Kind: 1977 and 1972 31

DESCRIPTION OF INDUSTRIES

SPECIAL INDUSTRY MACHINERY

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3551 Food Products Machinery
3552 Textile Machinery
3553 Woodworking Machinery
3554 Paper Industries Machinery
3555 Printing Trades Machinery
3559 Special Industry Machinery, N.E.C.

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 3551, FOOD PRODUCTS MACHINERY

This industry comprises establishments primarily engaged in the manufacture of machinery for use by the food products and beverage manufacturing industries in the preparation, canning, or packaging of food products; and parts and attachments for such machinery. Establishments primarily engaged in the manufacture of industrial refrigeration machinery are classified in industry group 385.

The total value of shipments for establishments classified in the Food Products Machinery industry amounted to $1,787 million in 1977, an increase of 79 percent from 1972. The value of shipments of products classified as primary to the industry was $1,576 million, an increase of 82 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were food packing packaging and bottling machinery for which shipments increased 112 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $1,056 million in 1977, was 75 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 36.3 thousand employees, an increase of 14 percent from 1972. The leading States in employment were Ohio, California, Illinois, and Wisconsin, accounting for approximately 45 percent of the industry's 1977 employment.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 6 percent of total value of shipments.

INDUSTRY 3552, TEXTILE MACHINERY

This industry comprises establishments primarily engaged in the manufacture of machinery for the textile industries, including parts, attachments, and accessories. Establishments primarily engaged in the manufacture of domestic or industrial sewing machines are classified in industry 3636.

The total value of shipments for establishments classified in the Textile Machinery industry amounted to $950 million in 1977, an increase of 15 percent from 1972. The value of shipments of products classified as primary to the industry was $857 million, an increase of 16 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) Value added by manufacture, at $539 million in 1977, was 11 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 25.9 thousand employees, a decrease of 21 percent from 1972. The leading States in employment were South Carolina, North Carolina, Massachusetts, and Rhode Island, accounting for approximately 70 percent of the industry's 1977 employment. Data for South Carolina have been withheld to avoid disclosing operations of indi-

vidual companies. However, establishment counts and employment size ranges are provided.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 7 percent of total value of shipments.

INDUSTRY 3553, WOODWORKING MACHINERY

This industry comprises establishments primarily engaged in the manufacture of machinery for sawmills, planing mills, cabinet and furniture makers, pattern makers, and veneer workers. Establishments primarily engaged in the manufacture of tools such as planes, axes, drawknives, and handsaws are classified in industry group 342; and portable power driven hand tools in industry 3546. The data for 1977 shown in tables 1, 2, and 4 are not comparable with the data for prior years. Plants engaged primarily in the manufacture of chain saws were tabulated in industry 3553 for prior years, but in industry 3546 for 1977. These plants had approximately 22 percent of the employees tabulated in industry 3553 for 1972.

The total value of shipments for establishments classified in the Woodworking Machinery industry amounted to $586 million in 1977. The value of shipments of products classified as primary to the industry was $547 million. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) Value added by manufacture was $318 million. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 10.3 thousand employees. The leading States in employment were Tennessee, Oregon, Mississippi, and Wisconsin, accounting for approximately 45 percent of the industry's 1977 employment. Data for Tennessee and Mississippi have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 7 percent of total value of shipments.

INDUSTRY 3554, PAPER INDUSTRIES MACHINERY

This industry comprises establishments primarily engaged in the manufacture of machinery for the pulp, paper, and paper products industries. Establishments primarily engaged in the manufacture of printing trades machinery are classified in industry 3555.

The total value of shipments for establishments classified in the Paper Industries Machinery industry amounted to $827 million in 1977, an increase of 85 percent from 1972. The value of shipments of products classified as primary to the industry was $698 million, an increase of 83 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were pulp mill machinery, for which shipments increased 115 percent, and paper mill machinery, for which shipments increased 50 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $465 million in 1977, was 83 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 16.4 thousand employees, an increase of 7 percent from 1972. The leading States in employment were Wisconsin, New York, Massachusetts, and New Jersey, accounting for approximately 60 percent of the industry's 1977 employment.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 3 percent of total value of shipments.

INDUSTRY 3555, PRINTING TRADES MACHINERY AND EQUIPMENT

This industry comprises establishments primarily engaged in the manufacture of machinery and equipment used by the printing and bookbinding trades. Establishments primarily engaged in the manufacture of textile printing machinery are classified in industry 3552.

The total value of shipments for establishments classified in the Printing Trades Machinery industry amounted to $1,351 million in 1977, an increase of 64 percent from 1972. The value of shipments of products classified as primary to the industry was $1,287 million, an increase of 75 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were typesetting machinery, for which shipments increased 143 percent, and lithographic printing presses, for which shipments increased 86 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $794 million in 1977, was 58 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 25.5 thousand employees, an increase of 7 percent from 1972. The leading States in employment were Massachusetts, Illinois, New Jersey, and

Pennsylvania, accounting for approximately 45 percent of the industry's 1977 employment. This represents a shift from 1972 when Massachusetts, Illinois, New Jersey, and Ohio accounted for approximately 55 percent of the industry's employment.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 4 percent of total value of shipments.

INDUSTRY 3559, SPECIAL INDUSTRY MACHINERY, N.E.C.

This industry comprises establishments primarily engaged in the manufacture of special industry machinery, not elsewhere classified, such as smelting and refining equipment, cement-making, clayworking, cotton ginning, glassmaking, hatmaking, incandescent lampmaking, leatherworking, paintmaking, rubberworking, cigar and cigarette making, tobacco working, shoemaking, and stoneworking machinery.

The total value of shipments for establishments classified in the Special Industry Machinery, N.E.C. industry amounted to $3,622 million in 1977, an increase of 38 percent from 1972. The value of shipments of products classified as primary to the industry was $3,465 million, an increase of 51 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were foundry machinery, for which shipments increased 141 percent, and plastics working machinery, for which shipments increased 54 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $2,096 million in 1977, was 31 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 70.4 thousand employees, an increase of 34 percent from 1972. The leading States in employment were Ohio, New York, Massachusetts, and Illinois, accounting for approximately 40 percent of the industry's 1977 employment. This represents a shift from 1972 when Ohio, Massachusetts, New Jersey, and Pennsylvania accounted for approximately 40 percent of the industry's employment.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 6 percent of total value of shipments.

Table 1a. Historical Statistics for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year[1]	Companies[2] (no.)	All establishments		All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Expenditures and assets		End-of-year inventories (million dollars)	Ratios	
		Total (no.)	With 20 employees or more (no.)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)				New capital expenditures (million dollars)	Gross value of fixed assets (million dollars)		Specialization (percent)	Coverage (percent)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. r Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

Note: For 1977, content of industry was changed to exclude chain saws. Beginning in 1977, chain saws are classified in Industry 3546, Power Driven Hand Tools. 1977 data include chain saw plants in order to present figures comparable with historical data of industry.
(NA) Not available.
[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. **Summary Statistics for the Industry: 1977**

[For explanation of terms, see appendix A]

Item	Unit of measure	Food products machinery (SIC 3551)	Textile machinery (SIC 3552)	Woodworking machinery (SIC 3553)	Paper industries machinery (SIC 3554)	Printing trades machinery (SIC 3555)	Special industry machinery, n.e.c. (SIC 3559)
Coverage ratio[2]	do	92	94	95	90	92	85

Used capital expenditures	do	2.5	3.3	2.0	3.8	4.1	20.7

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

(For explanation of terms, see appendix A. For description of annual survey of manufactures (ASM), see appendix B)

Item	Food products machinery (SIC 3551)		Textile machinery (SIC 3552)		Woodworking machinery (SIC 3553)	
	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)
Purchased services:						
Cost of purchased services for repair of--						
Buildings and other structures	2.0	8	(1.8)	43	(1.6)	(A)
Response coverage ratio[2] (percent)	58	(X)	56	(X)	59	(X)
Machinery	7.2	8	2.4	7	(3.1)	16
Response coverage ratio[2] (percent)	59	(X)	61	(X)	59	(X)
Cost of purchased communication services	8.5	13	4.5	8	(1.6)	26
Response coverage ratio[2] (percent)	65	(X)	65	(X)	64	(X)
Rental payments	10.8	8	(10.2)	20	(4.0)	27
Buildings and other structures	6.4	13	(7.3)	29	(1.5)	43
Machinery and equipment	4.4	7	2.9	8	(2.6)	48
Supplemental labor costs	93.6	2	55.6	2	23.0	5
Legal costs	42.3	1	24.4	2	11.4	6
Voluntary costs	51.3	3	31.3	2	11.7	6
Gross value of depreciable assets:						
Buildings and other structures:						
Beginning of year	148.7	4	93.5	7	36.3	9
New capital expenditures	(8.8)	17	(10.8)	21	(3.6)	19
Used capital expenditures	(0.6)	54	(2.3)	23	1.1	2
Retirements	(5.2)	18	(2.2)	31	(1.3)	73
End of year	153.0	5	104.4	6	39.7	9
Machinery and equipment:						
Beginning of year	341.3	3	257.8	5	87.8	7
New capital expenditures	35.0	6	(35.7)	19	15.0	14
Automobiles, trucks, etc., for highway use[3]	(0.9)	(A)	(1.5)	(A)	(1.4)	(A)
Computers and peripheral data processing equipment[3]	(1.9)	(A)	(1.0)	(A)	(Z)	(A)
All other[3]	(24.8)	81	(25.2)	(A)	(13.0)	(A)
New machinery and equipment, n.s.k.[4]	(7.4)	(A)	(8.0)	(A)	(0.5)	(A)
Used capital expenditures	1.4	5	(1.8)	22	(1.0)	37
Retirements	36.4	3	(13.9)	27	(3.5)	23
End of year	341.4	3	281.4	4	100.4	6
Total gross value of depreciable assets:						
Beginning of year	490.0	3	351.4	5	124.2	6
New capital expenditures	43.8	6	(46.5)	19	18.6	13
Used capital expenditures	(2.1)	18	(4.0)	22	(2.2)	18
Retirements	41.6	4	(16.1)	26	(4.8)	36
End of year	494.3	3	385.8	4	140.2	5
Depreciation charges during 1977	36.1	3	28.4	5	10.0	8
Buildings and other structures	6.6	11	5.4	7	1.6	13
Machinery and equipment	29.5	3	23.0	5	8.5	10

See footnotes at end of table.

Machinery and equipment:						
Beginning of year	155.3	4	264.4	3	634.8	1
New capital expenditures	8.7	6	30.5	9	80.1	11
Automobiles, trucks, etc., for highway use[3]	(0.4)	(A)	(0.7)	(A)	(2.9)	(A)
Computers and peripheral data processing equipment[3]	(0.1)	(A)	(0.6)	(A)	(1.3)	(A)
All other[3]	(8.1)	(A)	(24.5)	82	(70.6)	29
New machinery and equipment, n.s.k.[4]	-	(X)	(4.7)	(A)	(5.3)	(A)
Used capital expenditures	2.6	3	(4.6)	22	5.0	12
Retirements	(11.1)	24	23.1	3	29.7	9
End of year	155.5	4	276.4	3	690.1	1
Total gross value of depreciable assets:						
Beginning of year	237.5	3	351.6	3	951.5	2
New capital expenditures	12.8	4	43.6	6	100.3	11
Used capital expenditures	3.5	2	(4.7)	21	(30.7)	40
Retirements	(14.3)	23	30.9	4	34.5	8
End of year	239.5	3	368.9	3	1,048.0	2
Depreciation charges during 1977	13.8	6	29.7	9	68.2	5
Buildings and other structures	4.3	12	3.5	5	13.0	5
Machinery and equipment	9.5	3	26.2	10	55.1	7

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

This page is intentionally blank.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

[For explanation of terms, see appendix A]

Industry and employment size class	E[1]	All establishments (no.) - Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)				
3551	**Food products machinery:**										
	Entire industry	740	36.3	522.1	22.8	45.4	292.6	1 056.4	765.3	1 786.8	46.9

35593	Plastics working machinery and equipment:										
	Establishments with this product class primary	115	12.7	199.7	7.7	15.4	110.2	394.5	342.3	719.8	12.2
	Establishments with 75 percent specialization or more in class	87	8.2	127.5	5.0	10.2	71.7	252.9	241.3	486.5	9.0
35594	Rubber working machinery and equipment:										
	Establishments with this product class primary	38	4.1	58.6	2.8	5.5	36.0	95.5	71.5	166.2	4.2
	Establishments with 75 percent specialization or more in class	21	2.2	30.7	1.5	2.9	18.8	54.8	41.8	93.4	2.6
35595	Other special industry machinery and equipment:										
	Establishments with this product class primary	489	31.2	446.3	20.1	40.0	249.2	880.8	690.6	1 540.9	42.2
	Establishments with 75 percent specialization or more in class	414	26.2	369.6	17.1	33.8	211.0	731.1	575.0	1 281.3	33.2

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.
[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. Industry-Product Analysis — Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. [1]Data prior to 1977 are not comparable; see Description of Industries in text.

Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

Table 5c. **Industry-Product Analysis — Shipments by Product Class and Industry: 1977** — Con.

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

35595 89	Other special industry machinery and equipment and parts, including incandescent lampmaking, paintmaking, stoneworking, hatmaking, leatherworking, jewelers', pharmaceutical, etc	Number	248	(NA)	[17]854.4	(X)	[18]715.5
35595 00	Special industry machinery and equipment, n.e.c., except chemical, foundry, plastics, and rubber machinery, n.s.k		(NA)	(X)	123.5	(X)	64.5
35590 00	Special industry machinery, n.e.c., n.s.k., typically for establishments with 5 employees or more (see note)		(NA)	(X)	203.1	(X)	128.8
35590 02	Special industry machinery, n.e.c., n.s.k., typically for establishments with less than 5 employees (see note)		(NA)	(X)	113.2	(X)	40.7

Footnotes are on next page.

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimates did not meet publication standards. (X) Not applicable.

[1]Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]In 1977, in a new procedure, small establishments with more than 5 employees reported on short forms, which requested only product class totals. These data are included in codes ending in "00." Thus 1977 data for product codes (7 digits) may not be completely comparable with 1972 data.

[3]For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[4]Products within product class 35514 were completely revised for 1977, so no comparison is possible between 1977 and 1972.

[5]Product codes 35514 22, 35514 41, and 35514 89 were combined to avoid disclosing operations of individual companies.

[6]For 1977, product codes 35521 42 and 35521 47 were combined to avoid disclosing operations of individual companies.

[7]For 1977, product codes 35521 46 and 35521 48 were combined to avoid disclosing operations of individual companies.

[8]For 1972, product codes 35521 67 and 35521 81 were combined to avoid disclosing operations of individual companies.

[9]For 1972, product codes 35522 55 and 35522 43 were combined to avoid disclosing operations of individual companies.

[10]Figure adjusted to omit $102.1 million in value of shipments for chain saws, included in 1972 but tabulated in Industry 3546 in 1977.

[11]For 1972, product codes 35540 41 and 35540 49 were combined to avoid disclosing operations of individual companies.

[12]For 1977, product codes 35555 75 and 35555 98 were combined to avoid disclosing operations of individual companies.

[13]For 1972, product code 35555 77 was included with product code 35555 98.

[14]For 1977 preliminary data and for 1972, product codes 35595 91 and 35595 93 were included. For 1977 final data, values for these items were tabulated in industry 3567.

[15]For 1972, product codes 35592 21 and 35592 35 were combined to avoid disclosing operations of individual companies.

[16]For 1972, product codes 35594 11 and 35594 98 were combined to avoid disclosing operations of individual companies.

[17]For 1977, product codes 35595 22 and 35595 85 were combined with product code 35595 89 to avoid disclosing operations of individual companies.

[18]For 1972, product code 35595 22 was included with product code 35595 89.

Table 6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

(NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with these estimates are published in annual survey of manufactures volumes for this period. Figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

[2]Prior to 1977, chain saws, hand held, were included in product class 35531. Data for 1972, 1967, and 1963 have been adjusted to exclude value of chain saws. Data are not available on a comparable basis for 1973, 1974, 1975, and 1976.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. N.E.C. Not elsewhere classified.
n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

[1]For some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]From 1977 Census of Manufactures Supplemental Inquiry: Consumption of Materials, Parts, Containers, and Supplies During 1972 (Form MA-131).

[3]Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

[4]For 1972, material codes 306902, 307902, 329903, and 335609 were included with material code 970099.

[5]For 1972, material codes 335792 and 360101 were included with material code 970099.

[6]For 1972, material codes 360101 and 346901 were included with material code 970099.

6c. Product Classes—Value Shipped by All Producers: 1963, 1967, 1972 to 1977. 41

MATERIAL STATISTICS

7. Materials Consumed by Kind: 1977 and 1972. 42

DESCRIPTION OF INDUSTRIES

GENERAL INDUSTRIAL MACHINERY AND EQUIPMENT

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code	Title
3561	Pumps and Pumping Equipment
3562	Ball and Roller Bearings
3563	Air and Gas Compressors
3564	Blowers and Fans
3565	Industrial Patterns
3566	Speed Changers, Drives, and Gears
3567	Industrial Furnaces and Ovens
3568	Power Transmission Equipment, N.E.C.
3569	General Industrial Machinery, N.E.C.

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 3561, PUMPS AND PUMPING EQUIPMENT

This industry comprises establishments primarily engaged in the manufacture of pumps and pumping equipment for general industrial use. Establishments primarily engaged in the manufacture of measuring and dispensing pumps for gasoline service-station use are classified in industries 3586 and 3563.

The total value of shipments for establishments classified in the Pumps and Pumping Equipment industry amounted to $3,774 million in 1977, an increase of 97 percent from 1972. The value of shipments of products classified as primary to the industry was $3,523 million, an increase of 116 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were industrial pumps, except fluid power pumps, for which shipments increased 126 percent, and hydraulic fluid power pumps, for which shipments increased 87 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $2,142 million in 1977, was 95 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 63.0 thousand employees, an increase of 14 percent from 1972. The leading States in employment were Ohio, California, Illinois, and Texas, accounting for approximately 40 percent of the industry's 1977 employment.

The 1977 census obtained data on shipments of pumps and pumping equipment only at product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of pumps and pumping equipment are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-35P, Pumps and Compressors. Some of these data are also shown in table 6a.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agenices or developed from industry averages. These establishments accounted for 3 percent of total value of shipments.

INDUSTRY 3562, BALL AND ROLLER BEARINGS

This industry comprises establishments primarily engaged in the manufacture of ball and roller bearings (including ball or roller bearing pillow block, flange, takeup cartridge, and hanger units) and parts. Establishments primarily engaged in the manufacture of bearings, except ball and roller, are classified in industry 3568.

The total value of shipments for establishments classified in the Ball and Roller Bearings industry amounted to $2,567 million in 1977, an increase of 68 percent from 1972. The value of shipments of products classified as primary to the industry was $2,445 million, an increase of 72 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product

shipments.) The products accounting for a significant portion of this change were taper roller bearings, for which shipments increased 78 percent, and ball bearings, for which shipments increased 58 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $1,473 million in 1977, was 58 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 50.6 thousand employees, a decrease of 1 percent from 1972. The leading States in employment were Connecticut, Ohio, South Carolina, and Pennsylvania, accounting for approximately 40 percent of the industry's 1977 employment. Data for Ohio have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided. These same States were in the forefront of the industry's employment for 1972; however, data for some States were withheld to avoid disclosing operations of individual companies.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agenices or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3563, AIR AND GAS COMPRESSORS

This industry comprises establishments primarily engaged in the manufacture of air and gas compressors for general industrial use. Establishments primarily engaged in the manufacture of refrigeration compressors and compressing units are classified in industry 3585.

The total value of shipments for establishments classified in the Air and Gas Compressors industry amounted to $2,076 million in 1977, an increase of 142 percent from 1972. The value of shipments of products classified as primary to the industry was $1,923 million, an increase of 166 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were air and gas compressors and vacuum pumps, for which shipments increased 168 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $1,146 million in 1977, was 145 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 32.0 thousand employees, an increase of 40 percent from 1972. The leading States in employment were New York, Pennsylvania, Ohio, and Illinois, accounting for approximately 65 percent of the industry's 1977 employment. These same States were in the forefront of the industry's employment for 1972; however, data for some States were withheld to avoid disclosing operations of individual companies.

The 1977 census obtained data on shipments of air and gas compressors only at product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of air and gas compressors are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-35P, Pumps and Compressors. Some of these data are also shown in table 6a.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agenices or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3564, BLOWERS AND FANS

This industry comprises establishments primarily engaged in the manufacture of industrial and commercial blowers, industrial and commercial exhaust and ventilating fans, and attic fans. Establishments primarily engaged in the manufacture of air-conditioning units are classified in industry 3585, and free-air circulating fans for use on desks, pedestals, or wall brackets, as well as household window-type fans and rollabouts, and kitchen and household ventilating and exhaust fans are classified in industry 3634.

The total value of shipments for establishments classified in the Blowers and Fans industry amounted to $1,431 million in 1977, an increase of 78 percent from 1972. The value of shipments of products classified as primary to the industry was $1,422 million, an increase of 109 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were centrifugal blowers and fans, for which shipments increased 96 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $777 million in 1977, was 66 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 28.0 thousand employees, an increase of 19 percent from 1972. The leading States in employment were Ohio, New York, California, and Indiana, accounting for approximately 40 percent of the industry's 1977 employment. These same Sates were in the forefront of the industry's employment for 1972; however, data for some States were withheld to avoid disclosing operations of individual companies.

The 1977 census obtained data on shipments of industrial air pollution control equipment only at product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of industrial air pollution control equipment are reported annually in the Census Bureau's Current Industrial Reports (CIR)

MA-35J, Selected Industrial Air Pollution Control Equipment. Some of these data are also shown in table 6a.

Establishments of single-unit companies in this industry with up to 20 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agenices or developed from industry averages. These establishments accounted for 5 percent of total value of shipments.

INDUSTRY 3565, INDUSTRIAL PATTERNS

This industry comprises establishments primarily engaged in the manufacture of industrial patterns, except shoe patterns.

The total value of shipments for establishments classified in the Industrial Patterns industry amounted to $321 million in 1977, an increase of 62 percent from 1972. The value of shipments of products classified as primary to the industry was $412 million, an increase of 76 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were foundry patterns, for which shipments increased 57 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $253 million in 1977, was 57 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 9.3 thousand employees, an increase of 9 percent from 1972. The leading States in employment were Michigan, Ohio, and Illinois, accounting for approximately 50 percent of the industry's 1977 employment. These same States were in the forefront of the industry's employment for 1972; however, data for some States were withheld to avoid disclosing operations of individual companies.

The census of manufactures data for industry 3565 include data for "captive" production, i.e., production of foundry patterns for use by the producing company. Most of these captive establishments are part of companies primarily engaged in operating foundries.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agenices or developed from industry averages. These establishments accounted for 21 percent of total value of shipments.

INDUSTRY 3566, SPEED CHANGERS, DRIVES, AND GEARS

This industry comprises establishments primarily engaged in the manufacture of speed changers, industrial high-speed drives, and gears. Establishments primarily engaged in the manufacture of these items for motor vehicles are classified in industry 3714.

The total value of shipments for establishments classified in the Speed Changers, Drives, and Gears industry amounted to $1,222 million in 1977, an increase of 93 percent from 1972. The value of shipments of products classified as primary to the industry was $1,200 million, an increase of 102 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were industrial high-speed drives, for which shipments increased 228 percent, and course pitch gears, for which shipments increased 199 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $803 million in 1977, was 96 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 25.3 thousand employees, an increase of 12 percent from 1972. The leading States in employment were Wisconsin, Illinois, Ohio, and Indiana, accounting for approximately 55 percent of the industry's 1977 employment. This represents a shift from 1972 when Illinois, Wisconsin, Pennsylvania, and Indiana accounted for approximately 55 percent of the industry's employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agenices or developed from industry averages. These establishments accounted for 5 percent of total value of shipments.

INDUSTRY 3567, INDUSTRIAL FURNACES AND OVENS

This industry comprises establishments primarily engaged in the manufacture of industrial process furnaces, ovens, induction and dielectric heating equipment, and related devices.

The total value of shipments for establishments classified in the Industrial Furnaces and Ovens industry amounted to $746 million in 1977, an increase of 68 percent from 1972. The value of shipments of products classified as primary to the industry was $707 million, an increase of 107 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were electric metal processing and heat treating furnaces, for which shipments increased 219 percent, and infrared electric and extruding furnaces, for which shipments increased 113 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $469 million in 1977, was 92 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 15.2 thousand employees, an increase of 12 percent from 1972. The leading States in

employment were Pennsylvania, Ohio, Michigan, and Illinois, accounting for approximately 50 percent of the industry's 1977 employment. This represents a shift from 1972 when Pennsylvania, Ohio, California, and New Jersey accounted for approximately 55 percent of the industry's employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agenices or developed from industry averages. These establishments accounted for 4 percent of total value of shipments.

INDUSTRY 3568, POWER TRANSMISSION EQUIPMENT, N.E.C.

This industry comprises establishments primarily engaged in the manufacture of mechanical power transmission equipment and parts for industrial machinery. Establishments primarily engaged in the manufacture of automotive, tank, and tractor power transmission equipment are classified in industry 3714; aircraft power transmission equipment in industry 3728; ball and roller bearings in industry 3562; and speed changers, industrial high-speed drives, and gears in industry 3566.

The total value of shipments for establishments classified in the Power Transmission Equipment, N.E.C. industry amounted to $1,626 million in 1977, an increase of 86 percent from 1972. The value of shipments of products classified as primary to the industry was $1,711 million, an increase of 75 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were plain bearings and bushings, except automotive, for which shipments increased 119 percent, and sprockets, for which shipments increased 59 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $1,009 million in 1977, was 85 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 32.5 thousand employees, an increase of 17 percent from 1972. The leading States in employment were Indiana, Illinois, Michigan, and Pennsylvania, accounting for approximately 55 percent of the industry's 1977 employment. These same States were in the forefront of the industry's employment for 1972; however, data for some States were withheld to avoid disclosing operations of individual companies.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agenices or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3569, GENERAL INDUSTRIAL MACHINERY, N.E.C.

This industry comprises establishments primarily engaged in the manufacture of machinery, equipment, and components for general industrial use, and for which no special classification is provided. Establishments primarily engaged in the production of machine and equipment parts, usually on a job or order basis, are classified in industry 3599.

The total value of shipments for establishments classified in the General Industrial Machinery, N.E C. industry amounted to $2,780 million in 1977, an increase of 137 percent from 1972. The value of shipments of products classified as primary to the industry was $2,689 million, an increase of 137 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were packing and packaging machinery, except food, for which shipments increased 148 percent, and filters and strainers, for which shipments increased 129 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $1,602 million in 1977, was 130 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 57.5 thousand employees, an increase of 55 percent from 1972. The leading States in employment were California, New York, Illinois, and Pennsylvania, accounting for approximately 35 percent of the industry's 1977 employment. This represents a shift from 1972 when California, Pennsylvania, Wisconsin, and New York accounted for approximately 35 percent of the industry's employment.

Establishments of single-unit companies in this industry with up to 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agenices or developed from industry averages. These establishments accounted for 7 percent of total value of shipments.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. r Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. **Summary Statistics for the Industry: 1977**

[For explanation of terms, see appendix A]

Item	Unit of measure	Pumps and pumping equipment (SIC 3561)	Ball and roller bearings (SIC 3562)	Air and gas compressors (SIC 3563)	Blowers and fans (SIC 3564)	Industrial patterns (SIC 3565)	Speed changers, drives, and gears (SIC 3566)	Industrial furnaces and ovens (SIC 3567)	Power transmission equipment, n.e.c. (SIC 3568)	General industrial machinery, n.e.c. (SIC 3569)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Buildings and other structures	(8.2)	34	2.6	9	4.9	4	9.7	5
Machinery and equipment	35.1	3	7.5	6	33.9	3	35.2	5

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

This page is intentionally blank.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

[For explanation of terms, see appendix A]

Industry and employment size class	E[1]	All establishments (no.)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)	End-of-year inventories (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)

See footnotes at end of table.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977—Con.

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)				
3567	**Industrial furnaces and ovens:**										
	Entire industry	327	15.2	209.4	9.3	17.9	107.4	469.3	305.4	746.3	13.4
	Establishments with 75 percent specialization or more	307	12.6	173.0	7.5	14.8	85.7	387.8	258.9	627.8	11.4

	Establishments with 75 percent specialization or more	193	21.5	300.0	15.7	30.5	198.9	650.1	406.8	1 046.1	31.5
35681	Plain bearings and bushings:										
	Establishments with this product class primary	58	6.6	88.1	5.0	9.9	60.7	178.7	121.7	291.9	10.0
	Establishments with 75 percent specialization or more in class	50	4.9	65.2	3.8	7.4	44.5	126.7	89.5	210.2	7.3
35683	Power transmission equipment, n.e.c.:										
	Establishments with this product class primary	115	25.5	370.3	18.4	35.1	241.8	816.0	519.3	1 310.2	39.5
	Establishments with 75 percent specialization or more in class	92	16.0	228.3	11.5	22.4	150.2	509.3	308.4	812.5	23.4
3569	**General industrial machinery, n.e.c.:**										
	Entire industry	1 646	57.5	783.2	34.9	69.2	397.7	1 602.2	1 194.8	2 779.5	82.6
	Establishments with 75 percent specialization or more	1 487	44.3	592.8	27.0	53.1	302.9	1 236.4	892.2	2 104.3	64.9
35691	Packing and packaging machinery, except for food:										
	Establishments with this product class primary	151	10.5	148.0	6.7	13.6	83.0	306.9	205.2	512.1	11.7
	Establishments with 75 percent specialization or more in class	117	6.3	87.1	4.0	8.0	49.2	168.3	120.0	284.4	5.1
35692	Industrial filters and strainers:										
	Establishments with this product class primary	122	13.5	179.5	8.0	15.6	82.3	374.2	277.3	647.4	(D)
	Establishments with 75 percent specialization or more in class	99	10.8	143.9	6.2	12.0	64.2	311.3	206.9	515.2	(D)
35699	Other general industrial machinery:										
	Establishments with this product class primary	727	26.5	368.5	15.8	31.4	185.1	740.9	582.2	1 311.8	37.0
	Establishments with 75 percent specialization or more in class	623	19.6	266.3	11.8	23.5	138.1	556.3	427.0	968.1	29.4

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. Industry-Product Analysis — Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B&C (percent)	Total made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)

n.e.c. Not elsewhere classified.

[1] Prior to 1972, industry 3561 included industry 3563 although the industry code was the same. In 1972, industries 3566 and 3568 were established as seperate industries. Data for 1967 are not available.

Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

See footnotes at end of table.

Table 5c. **Industry-Product Analysis — Shipments by Product Class and Industry: 1977** — Con.

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

See footnotes at end of table.

Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977 — Con.

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

	3811	Engineering and scientific instruments	(D)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

Table 6a. Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation, see appendix A, Value of shipments)

1977 product code	Product	Unit of measure	1977			1972	
			Number of companies with shipments of $100,000 or more	Product shipments[1]		Product shipments	
				Quantity	Value (million dollars)	Quantity	Value (million dollars)
	PUMPS AND PUMPING EQUIPMENT						
3561- --	Total	.....	(NA)	(X)	3,522.8	(X)	1,632.9
35611 --	Industrial pumps, except hydraulic fluid power pumps:						
	As reported in the census of manufactures	.....	149	(X)	1,386.7	(X)	611.9
	As reported in Current Industrial Reports MA-35P, Pumps and Compressors	.....	(NA)	(X)	1,374.7	(X)	615.5
	Value of drivers (reported separately)[2]	.....	(NA)	(X)	244.5	(X)	113.2
	Reciprocating pumps:						
35611 01	Direct-acting, steam-driven	Thousands	(NA)	.8	3.3	1.1	2.3
35611 03	Power-operated, other than steam		(NA)	323.2	94.0	188.7	52.7
	Turbine pumps, vertical, including deep well:						
35611 05	Submersible, over 5 hp		(NA)	20.4	57.0	11.9	13.1
	Other than submersible:						
35611 09	16 inch diameter bowl size and under		(NA)	25.9	97.5	25.4	43.8
35611 10	Over 16 inch diameter bowl size		(NA)	2.0	14.1	3.1	8.6
	Centrifugal pumps:						
	Single stage, single suction, close coupled:						
35611 11	1/2 inch discharge outlet and under		(NA)	11.9	1.0	6.7	.5
35611 12	3/4 inch and 1 inch discharge outlet		(NA)	119.1	16.2	127.7	8.2
35611 14	1 1/4 inch and 1 1/2 inch discharge outlet		(NA)	408.1	36.3	251.5	15.5
35611 15	2 inch and 2 1/2 inch discharge outlet		(NA)	104.5	27.6	81.4	10.7
35611 16	3 inch and 4 inch discharge outlet		(NA)	47.4	22.9	47.2	11.1
35611 19	Over 4 inch discharge outlet		(NA)	6.5	21.5	7.1	7.4
	Single state, single suction, frame mounted:						
35611 21	1/2 inch discharge outlet and under		(NA)	400.0	28.0	174.2	11.4
35611 22	3/4 inch and 1 inch discharge outlet		(NA)				
35611 23	1 1/4 inch and 1 1/2 inch discharge outlet		(NA)	41.6	26.6	37.6	10.6
35611 24	2 inch and 2 1/2 inch discharge outlet		(NA)	45.8	33.4	38.3	13.8
35611 25	3 inch discharge outlet		(NA)	28.3	30.4	22.4	12.2
35611 26	4 inch to 6 inch discharge outlet		(NA)	27.5	51.5	30.4	30.3
35611 29	Over 6 inch discharge outlet		(NA)	5.7	39.2	4.2	11.3
	Single stage, double suction:						
35611 42	Under 4 inch discharge outlet		(NA)	9.8	8.3	9.4	4.1
35611 44	4 inch and 5 inch discharge outlet		(NA)	5.8	12.3	6.1	6.1
35611 46	6 inch and 7 inch discharge outlet		(NA)	3.6	12.5	3.5	5.5
35611 48	8 inch and 12 inch discharge outlet		(NA)	3.8	21.9	3.0	9.3
35611 49	Over 12 inch discharge outlet		(NA)	.9	33.3	.5	8.1
	Multistage (single or double suction):						
35611 52	1 1/2 inch discharge outlet and under		(NA)	37.8	9.1	8.8	3.9
35611 54	2 inch and 3 inch discharge outlet		(NA)	2.1	34.8	5.0	13.9
35611 56	4 inch and 5 inch discharge outlet		(NA)	1.0	27.5	1.2	9.1
35611 58	6 inch and 7 inch discharge outlet		(NA)	.3	16.3	.3	5.7
35611 59	8 inch and over discharge outlet		(NA)	.4	24.8	.4	14.6
	Propeller and mixed flow:						
35611 62	20 inch and under		(NA)	3.1	11.5	1.8	4.0
35611 64	Over 20 inch		(NA)	1.7	38.8	.6	11.3
	All other centrifugal pumps, including can, etc.:						
35611 65	1 1/2 inch discharge outlet and under		(NA)	889.2	27.1	600.0	12.0
35611 66	2 inch to 6 inch discharge outlet		(NA)	76.4	36.9	27.8	12.8
35611 69	Over 6 inch discharge outlet		(NA)	6.2	77.1	.5	44.6
	Rotary pumps:						
	100 p.s.i. and under, designed pressure:						
35611 70	10 g.p.m. and under, designed capacity		(NA)	622.9	20.1	406.9	10.8
35611 71	11-99 g.p.m., designed capacity		(NA)	160.6	17.6	110.3	12.4
35611 72	100-299 g.p.m., designed capacity		(NA)	63.8	7.0	72.2	4.4
35611 73	300 g.p.m. and over, designed capacity		(NA)	2.7	3.8	2.5	1.6
	101-250 p.s.i., designed pressure:						
35611 74	10 g.p.m. and under, designed capacity		(NA)	157.7	9.6	153.5	6.1
35611 75	11-99 g.p.m., designed capacity		(NA)	47.0	15.2	52.7	10.7
35611 76	100 g.p.m. and over, designed capacity		(NA)	16.6	13.7	14.2	6.7
	251-500 p.s.i., designed pressure:						
35611 77	10 g.p.m. and under, designed capacity		(NA)	70.7	3.1	63.5	1.9
35611 78	11 g.p.m. and over, designed capacity		(NA)	15.2	7.9	15.9	6.0
35611 79	Over 500 p.s.i., designed pressure		(NA)	6.0	8.4	4.9	4.6
35611 98	Other industrial pumps	Thousands	(NA)	84.3	31.1	46.9	8.5
35612 --	Hydraulic fluid power pumps:						
	As reported in the census of manufactures	.....	54	(X)	488.9	(X)	261.6
	As reported in Current Industrial Reports MA-35P, Pumps and Compressors	.....	(NA)	(X)	485.5	(X)	259.2
	Value of drivers (reported separately)[2]	.....	(NA)	(X)	7.4	(X)	6.1
35612 81	Gear type	Thousands	(NA)	(NA)	130.0	2,103.7	122.2
35612 83	Vane type[3]		(NA)	372.4	55.5	490.5	48.9
	Piston type:						
35612 85	Axial		(NA)	439.3	122.0	318.8	75.0
35612 87	Rotary or radial		(NA)	5.0	8.2	6.6	6.9
35612 11	Other types		(NA)	14.7	2.0	(NA)	(NA)
35612 99	Hydraulic fluid power motors	Thousands	(NA)	1,213.7	160.4	(NA)	(NA)

See footnotes at end of table.

35699 00	General industry machinery, n.e.c., except packing and packaging machinery, filters, and strainers, n.s.k.		(NA)	(X)	[15]167.3	(X)	-
35690 00	General industrial machinery, n.e.c., n.s.k., typically for establishments with 10 employees or more (see note)		(NA)	(X)	251.4	(X)	116.5
35690 02	General industrial machinery, n.e.c., n.s.k., typically for establishments with less than 10 employees (see note)		(NA)	(X)	55.9	(X)	28.0

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

Footnotes continued on next page.

- Represents zero. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. [r]Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or less than half the unit of measure specified.

[1]Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]Included only at product class level. Value of drivers (electric motors or prime movers) shipped with individual products is excluded, except in value for product codes 35613 13 through 35613 70. Extent to which some respondents may have included value of drivers in value of specific pumps is unknown.

[3]Excludes hydraulic fluid power pumps for power steering units in passenger automobiles.

[4]For some establishments data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[5]Includes value of drivers.

[6]For 1972, product codes 35621 15 and 35621 17 were included with product code 35621 21.

[7]For 1972, data do not include thrust roller bearings, which were reported separately. Their value was $39.4, which is not included in product class total for 1972, but is included in industry total.

[8]Only total figures are reported. Except for product codes 35631 46, 35631 47, and 35631 48, value figures for individual products exclude value of drivers (electric motors or internal combustion engines) shipped. Extent to which some respondents may have included value of drivers with specific compressors or pumps is not known.

[9]Includes value of drivers.

[10]Includes compressors for air brake systems used in transportation equipment.

[11]Included with industry 3561. Not available separately because of manner in which 1972 data were reported and tabulated.

[12]For 1972, product code 35643 00 was combined with product code 35644 00.

[13]For 1972, product code 35645 31 was combined with product code 35645 49.

[14]The value of shipments published in the MA-35J survey includes receipts for activities of facilities which do not perform manufacturing as their major operation. Such establishments have been excluded from the census of manufacturers since their primary activity is not considered manufacturing. Thus the value of product shipments shown in this report will not agree with the figure shown in the MA-35J report.

[15]In 1977, in a new procedure, small establishments with more than 5 employees reported on short forms, which requested only product class totals. These data are included in the codes ending in "00." Thus 1977 data for product codes (7 digits) may not be completely comparable with 1972 data.

[16]For the 1977 final publication, product codes 35595 91 and 35595 93 were re-coded to product 35674 19. Therefore data for this product, 35674 -- and 3567- -- may not be comparable to 1972 data.

[17]For 1972, product code 35674 00 was combined with product code 35675 00 to avoid disclosing operations of individual companies.

[18]For 1972, product codes 35683 61, 35683 91, 35683 96, 35683 97, and 35683 98 were combined.

[19]For 1972, product codes 35699 32, 35699 33, 35699 34, 35699 39, 35699 41, 35699 43, 35699 45, and 35699 74 were included with product code 35699 98.

Table 6b. **Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972** — Con.

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

- Represents zero. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

[2]Data for 1972 and later are not strictly comparable to prior years.

[3]Prior to 1972 parts for air and gas compressors were included with parts for pumps.

[4]Prior to 1972 values for 35610 includes values for 35630.

Table 7. Materials Consumed by Kind: 1977 and 1972

(Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see appendix A, Cost of materials)

Footnotes are on next page.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or less than half the unit of measure specified.

[1]For some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]Data included with material code 970099.

[3]From 1972 Census of Manufactures Supplemental Inquiry: Consumption of Materials, Parts, Containers, and Supplies During 1972 (Form MA-131).

[4]Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

[5]For 1977, material codes 331012 and 331013 were combined to avoid disclosing operations of individual companies.

[6]For 1972, material codes 335143 and 335102 were combined to avoid disclosing operations of individual companies.

[7]Includes only quantities and values purchased.

[8]For 1972, material code 335143 was included with material code 335102.

Office, Computing, and Accounting Machines

Description of Industries 2

TABLES

INDUSTRY STATISTICS

1a. Historical Statistics: 1977 and Earlier Years 5
1b. Selected Operating Ratios: 1977 and Earlier Years 6
2. Geographic Area: 1977 and 1972 7
3a. Summary Statistics: 1977 9
3b. Supplemental Statistics Based on Sample Estimates: 1977 10
4. Employment Size of Establishment: 1977 11
5a. Industry and Primary Product Class Specialization: 1977 12

PRODUCT STATISTICS

5b. Industry-Product Analysis—Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967 13
5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977 14
6a. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1977 and 1972 16
6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972 21
6c. Product Classes—Value Shipped by All Producers: 1962, 1967, 1972 to 1977 22

MATERIAL STATISTICS

7. Materials Consumed by Kind: 1977 and 1972 23

DESCRIPTION OF INDUSTRIES

OFFICE, COMPUTING, AND ACCOUNTING MACHINES

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title	
3573	Electronic Computing Equipment
3574	Calculating and Accounting Machines
3576	Scales and Balances, Except Laboratory
3579, 3572	Office, Machines, N.E.C., and Typewriters

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a–5a) with product statistics (table 6a showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 3573, ELECTRONIC COMPUTING EQUIPMENT

This industry comprises establishments primarily engaged in the manufacture of electronic computers and peripheral equipment and/or major logical components intended for use in electronic computer systems. Included are general-purpose electronic analog computers, electronic digital computers, military, ruggedized, and special-purpose computers. The electronic computers may be used for data processing or may be incorporated as components of control equipment for industrial use and as components of equipment used in weapons and weapons systems, space and oceanographic exploration, transportation, and other systems. Electronic computer systems contain high-speed arithmetic and program control units, on-line information storage devices, input/output equipment, terminals, data communication devices, and punched card equipment.

In addition to providing technical manuals necessary for the operation and maintenance of the equipment, establishments in this industry usually furnished general-purpose computer programs and basic operating systems programs needed for effective use of the computer system. Establishments primarily producing rebuilt electonic computers are also included in this industry. Establishments primarily engaged in the manufacture of desk calculators, cash registers, accounting machines, and similar equipment that are operator-paced are classified in industry 3574; electrical and electronic test equipment in industry 3825 (Instruments to Measure Electricity); industrial controls, including electronic, in industry 3622 (Industrial Controls); and industrial process instruments in industry 3823 (Process Control Instruments).

The total value of shipments for establishments specified in the Electronic Computing Equipment industry amounted to $12,922 million in 1977, an increase of 100 percent from 1972. The value of shipments of products classified as primary to the idustry was $12,673 million, an increase of 107 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were peripheral equipment for computers for which shipments increased 122 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $7,623 million in 1977, was 118 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 192.6 thousand employees, an increase of 33 percent from 1972. The leading States in employment were Massachusetts, New York, Minnesota, and California, accounting for 62 percent of the industry's 1977 employment. Data for some States have been withheld to avoid disclosing operations of individual companies; however, employment size ranges are provided. These same States were in the forefront for 1972, although there has been some shift in the relative importance of individual States.

The 1977 census obtained data on shipments of electronic computing equipment only at broad product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figues on the shipments of electronic computing equipment are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-35R, Office, Computing, and Accounting Machines. These data are also shown in table 6a.

Single-unit establishments in this industry with less than 20 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3574, CALCULATING AND ACCOUNTING MACHINES

This industry comprised establishments primarily engaged in the manufacture of desk calculators, adding and accounting machines, cash registers, and similar equipment. Included are electronic calculating and accounting machines which, even when augmented by attachments, or which include program control, or have input/output capabilities, must be paced by operator intervention. Establishments primarily engaged in the manufacture of electronic computing equipment are classified in industry 3573; typewriters, office duplicating machines and devices, autographic registers, and other office machines are classified in industry 3579.

The total value of shipments for establishments specified in the Calculating and Accounting Machines industry amounted to $850 million in 1977, an increase of 33 percent from 1972. The value of shipments of products classified as primary to the industry was $836 million, an increase of 20 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were electronic calculators for which shipments increased 64 percent, and mechanical calculators, accounting machines, and cash registers for which shipments decreased 9 percent. Value added by manufacture, at $395 million in 1977, was 3 percent below value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 17.1 thousand employees, a decrease of 24 percent from 1972. The leading States in employment were Michigan and Texas. Data for all States except California have been withheld to avoid disclosing operations of individual companies, however, employment size ranges are provided. This represents a shift from 1972 when Michigan and Ohio were the leading States.

The 1977 census obtained data on shipments of calculating and accounting machines only at broad product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of calculating and accounting machines are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-35R, Office, Computing, and Accounting Machines. These data are also shown in table 6a.

Single-unit establishments in this industry with less than 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3576, SCALES AND BALANCES, EXCEPT LABORATORY

This industry comprises establishments primarily engaged in the manufacture of weighing and force measuring machines and devices of all types. Establishments primarily engaged in the manufacture of measuring machines and devices regarded as scientific apparatus for laboratory work are classified in industry 3811 (Engineering and Scientific Instruments).

The total value of shipments for establishments specified in the Scales and Balances, Except Laboratory industry amounted to $348 million in 1977, an increase of 74 percent from 1972. The value of shipments of products classified as primary to the industry was $329 million, an increase of 81 percent from 1972. (See the Introduction for a discussion of the differences between value of shipments for the industry and vlaue of product shipments.) Value added by manufacture, at $215 million in 1977, was 66 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 7.1 thousand employees, an increase of 6 percent from 1972. The leading States in employment were Ohio and Illinois. Data for all States except New York, Illinois, and California have been withheld to avoid disclosing operations of individual companies; however, employment size ranges are provided. These same States were in the forefront for 1972, although there has been some shift in the relative importance of individual States.

Single-unit establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 4 percent of total value of shipments.

INDUSTRY 3579 AND 3572, OFFICE MACHINES, N.E.C. AND TYPEWRITERS

This industry comprises establishments primarily engaged in the manufacture of typewriters and parts, including coded media typewriters and specialized composing typewriters. This industry is combined with the Office Machines, N.E.C., industry which includes establishments primarily engaged in manufacturing office machines and devices, not elsewhere classified. For a detailed list of products of these industries, refer to table 6a, product codes 35793 11 to 35798 41. Establishments primarily engaged in the manufacture of computing machines are classified in industry 3573, cash registers in industry 3574, and photocopy and microfilm equipment in industry 3861 (Photographic Equipment and Supplies).

The classification of establishments for which data are tabulated in this report is based upon the definitions and coding structure contained in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President. The statistics for these industries are classified under the 1972 edition of the SIC manual were unchanged as to code number or content from the previous classification system. However, it was necessary to combine industry 3572, Typewriters, with industry 3579, Office Machines, N.E.C., to avoid disclosing the operations of individual companies.

The total value of shipments for establishments specified in the Office Machines, N.E.C., and Typewriters industry amounted to $2,720 million in 1977, an increase of 110 percent from 1972. The value of shipments of products classified as primary to the industry was $2,020 million, an increase of 93 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were typewriters, including coded media and typewriter-principle machines for which shipments increased 179 percent. Value added by manufacture, at $1,691 million in 1977, was 94 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 42.4 thousand employees, an increase of 23 percent from 1972. The leading States in employment were Connecticut, New York, Illinois, Kentucky, Texas, and California. Data for most States have been withheld to avoid disclosing operations of individual companies; however, establishment counts and employment size ranges are provided. This represents a shift from 1972 when Ohio, Illinois, New York, and Kentucky were the leading States.

The 1977 census obtained data on shipments of office machines, n.e.c., and typewriters only at broad product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of office machines, n.e.c., and typewriters are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-35R Office, Computing, and Accounting Machines. Some of these data are also shown in table 6a.

Single-unit establishments in this industry with less than 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

Table 1a. Historical Statistics for the Industry: 1977 and Earlier Years

(For explanation of terms, see appendix A)

Year[1]	Companies[2] (no.)	All establishments: Total (no.)	All establishments: With 20 employees or more (no.)	All employees: Number (1,000)	All employees: Payroll (mil. dol.)	Production workers: Number (1,000)	Production workers: Hours (mil.)	Production workers: Wages (mil. dol.)	Value added by manufacture (mil. dol.)	Cost of materials (mil. dol.)	Value of shipments (mil. dol.)	Expenditures and assets: New capital expenditures (mil. dol.)	Expenditures and assets: Gross value of fixed assets (mil. dol.)	End-of-year inventories (mil. dol.) [1] In Annual Survey of Manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1971, see 1972 Census of Manufactures, vol. II, table 1 of the industry chapter.

[2] For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3] Industry was defined after 1967 Census of Manufactures, so data are available only for years shown.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

(For explanation of terms, see appendix A)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. Summary Statistics for the Industry: 1977

[For explanation of terms, see appendix A]

Item	Unit of measure	Electronic computing equipment (SIC 3573)	Calculating and accounting machines (SIC 3574)	Scales and balances, except laboratory (SIC 3576)	Typewriters; and office machines, n.e.c. (SIC 3572 and 3579)
Primary product specialization ratio[1]	percent	94	84	96	96
Coverage ratio[2]	do	91	77	99	93
All establishments	number	931	64	103	215
With 1 to 19 employees	do	497	33	57	117
With 20 to 99 employees	do	186	10	25	43
With 100 employees or more	do	248	21	21	55
All employees, average for year	1,000	192.6	17.1	7.1	42.4
Payroll for year, all employees	mil. dol.	3 003.9	220.7	84.5	638.8
Production workers:					
Average for year	1,000	85.5	10.4	4.7	22.9
March	do	81.0	9.0	4.6	22.8
May	do	83.0	10.3	4.6	22.9
August	do	86.5	11.2	4.6	22.9
November	do	91.4	11.2	4.8	22.9
Hours	millions	172.3	18.1	9.1	43.7
January to March	do	41.1	4.0	2.3	11.1
April to June	do	42.1	4.5	2.3	11.3
July to September	do	43.3	4.7	2.2	10.2
October to December	do	45.9	4.9	2.4	11.2
Wages	mil. dol.	978.1	92.9	46.9	266.0
Cost of materials, etc.	do	5 700.5	450.5	138.8	1 077.1
Materials, parts, containers, etc., consumed	do	5 240.6	401.3	126.7	892.8
Resales	do	220.5	39.4	5.2	127.7
Fuels consumed	do	11.7	1.6	1.1	6.9
Purchased electric energy	do	65.3	4.8	2.0	13.7
Contract work	do	162.4	3.5	3.9	36.1
Value of shipments, including resales	do	12 921.8	850.0	348.1	2 719.7
Value of resales	do	260.3	61.3	7.6	242.3
Value added by manufacture	do	7 622.5	394.8	214.9	1 691.3
Manufacturers' inventories:					
Beginning of year	do	2 525.9	215.5	79.6	504.2
Finished products	do	466.8	28.9	15.0	109.9
Work in process	do	1 315.8	131.7	44.3	298.0
Materials, supplies, fuel, etc.	do	743.3	54.9	20.3	96.2
End of year	do	3 007.7	218.2	85.7	575.3
Finished products	do	537.4	31.2	17.4	108.1
Work in process	do	1 646.3	124.7	47.5	348.5
Materials, supplies, fuel, etc.	do	824.1	62.3	20.8	118.6
Capital expenditures for plant and equipment	do	716.9	56.6	7.0	122.9
New capital expenditures	do	651.4	56.3	6.8	111.5
New buildings and other structures	do	107.3	26.2	1.5	31.1
New machinery and equipment	do	544.1	30.2	5.4	80.4
Used capital expenditures	do	65.5	0.2	0.2	11.4

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

(For explanation of terms, see appendix A. For description of annual survey of manufactures (ASM), see appendix B)

Item	Electronic computing equipment (SIC 3573)		Calculating and accounting machines (SIC 3574)		Scales and balances, except laboratory (SIC 3576)		Typewriters; and office machines, (SIC 3572/3579)	
	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)
Purchased services:								
Cost of purchased services for repair of--								
Buildings and other structures	25.2	3	0.5	4	(0.6)	85	4.2	4
Response coverage ratio[2] (percent)	70	(X)	81	(X)	66	(X)	73	(X)
Machinery	24.0	6	0.4	5	(1.1)	16	6.3	2

Cost of purchased communication services	71.3	8	3.0	14	(1.5)	38	11.4	4
Response coverage ratio[2] (percent)	65	(X)	84	(X)	67	(X)	80	(X)
Rental payments	112.4	4	3.8	6	2.5	13	19.7	5
Buildings and other structures	68.5	5	1.8	14	1.7	9	10.9	5
Machinery and equipment	43.9	5	2.0	2	(0.8)	23	8.8	5
Supplemental labor costs	527.5	1	38.5	1	16.0	2	125.4	1
Legal costs	205.1	1	15.2	1	6.8	2	42.7	1
Voluntary costs	322.4	1	23.3	1	9.2	2	82.7	1
Gross value of depreciable assets:								
Buildings and other structures:								
Beginning of year	657.6	2	96.3	2	27.1	7	202.6	4
New capital expenditures	112.4	4	26.0	1	(1.3)	15	32.0	4
Used capital expenditures	53.2	4	-	(X)	-	(X)	5.1	1
Retirements	18.4	7	10.9	1	(0.1)	37	5.0	5
End of year	804.8	2	111.4	1	28.3	6	234.7	3
Machinery and equipment:								
Beginning of year	1,892.9	1	157.9	1	48.6	4	480.1	4
New capital expenditures	499.8	2	29.0	1	5.5	9	89.3	6
Automobiles, trucks, etc., for highway use[3]	(1.2)	(A)	(0.1)	(A)	(0.2)	(A)	(1.1)	(A)
Computers and peripheral data processing equipment[3] [4]	155.4	2	(1.9)	(A)	(0.4)	(A)	(10.9)	(A)
All other[3]	299.2	8	(25.1)	80	(4.2)	(A)	(70.3)	28
New machinery and equipment, n.s.k.[5]	(44.1)	45	(1.9)	(A)	(0.7)	(A)	(7.1)	(A)
Used capital expenditures	(14.5)	(A)	0.2	1	0.2	1	23.0	1
Retirements	170.0	2	22.2	1	4.5	3	18.2	11
End of year	2,237.2	1	164.9	1	49.7	4	574.1	4
Total gross value of depreciable assets:								
Beginning of year	2,550.5	1	254.2	1	75.7	4	682.7	1
New capital expenditures	612.2	2	55.0	1	6.7	8	121.3	4
Used capital expenditures	(67.7)	24	0.2	1	0.2	1	28.1	1
Retirements	188.4	2	33.0	1	4.6	4	23.2	10
End of year	3,042.0	1	276.3	1	78.0	4	808.8	1
Depreciation charges during 1977	276.0	3	23.4	1	5.3	5	60.5	3
Buildings and other structures	33.1	2	3.7	2	1.0	7	7.0	3
Machinery and equipment	242.9	3	19.7	1	4.3	5	53.4	3

Note: Data for total new captal expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

[5]For industries 3573 and 3572/3579 most of the value reported is for machines produced then leased out. The value of these leased machines is included in the assets and expenditures of the producing plants.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

[For explanation of terms, see appendix A]

Industry and employment size class	E[1]	All establishments (no.)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)	End-of-year inventories (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. **Industry-Product Analysis — Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967**

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

Table 5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

See footnotes at end of table.

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

35798 20, 40, 50	Produced by complete machine manufactures:						
	As reported in census of manufactures	.....	38	(X)	108.3	(X)	77.0
	As reported in the Current Industrial Reports MA-35R, Office, Computing, and Accounting Machines	.....	(NA)	(X)	106.4	(X)	83.3
35798 20	Parts and attachments for duplicating machines, sold separately	.....	13			(X)	48.0
35798 40	Parts for dictating equipment	.....	4	(X)	[r]106.4		
35798 50	Parts and attachments for office machines, n.e.c., except duplicating machines and dictating equipment	.....	32			(X)	35.3
35798 41	Produced by other than complete machine manufacturers	.....	13	(X)	35.0	(X)	(D)
35798 00	Parts and attachments for addressing, dictating, duplicating, and other office and store machines, n.e.c., n.s.k.	.....	-	(X)	-	(X)	-
35790 00	Office machines, n.e.c., n.s.k., typically for establishments with 10 employees or more (see note)	.....	(NA)	(X)	15.4	(X)	11.7
35790 02	Office machines, n.e.c., n.s.k., typically for establishments with less than 10 employees (see note)	.....	(NA)	(X)	22.6	(X)	6.3

Footnotes are on next page.

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. r Revised (X) Not applicable

[1]Data for product codes 35732 53, 35732 63, and 35732 65 were combined to avoid disclosing operations of individual companies.

[2]Values for these products were included in total value for product class 35743 to avoid disclosing operations of individual companies.

[3]For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[4]For 1977 and 1972, Industry 3572, Typewriters was combined with Industry 3579, Office Machines, N.E.C. to avoid disclosing operation of individual companies.

[5]For 1977 and 1972, product classes 35794 and 37596 were combined to avoid disclosing operations of individual companies.

[6]For 1972, product codes 35794 21, 35794 23, 35794 25, 35794 28, 35794 29, 35796 32, and 35796 98 were combined to avoid disclosing operations of individual companies.

[7]For 1977, product codes 35797 20 and 35797 40 were combined to avoid disclosing operations of individual operations.

[8]Quantity is limited to complete typewriters.

Table 6b. **Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972**

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

Product class and geographic area	Value of product shipments	
	1977	1972
35731, ELECTRONIC COMPUTERS		
United States	3,546.9	1,884.3

35790	Office machines, n.e.c., n.s.k.	38.0	(S)	(-)	(9.4)	32.8	18.0	18.8	(NA)

Represents zero. (D) Withheld to avoid disclosing operationsoof individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because the estimate did not meet publication standards.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

Table 7. **Materials Consumed by Kind: 1977 and 1972**

971000	Materials, parts, containers, and supplies, n.s.k.[3]		(X)	16.2	(X)	7.6

See footnotes at end of table.

Table 7. Materials Consumed by Kind: 1977 and 1972—Con.

(Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see appendix A, Cost of materials)

1977 material code	Material	Unit of measure	1977		1972	
			Quantity[1]	Delivered cost (million dollars)	Quantity	Delivered cost (million dollars)
	INDUSTRIES 3579, OFFICE MACHINES, N.E.C., AND 3572, TYPEWRITERS					
3579-- 3572--	Materials, parts, containers, and supplies	.....	(X)	892.8	(X)	326.1
	Mill shapes and forms except castings:					
	Carbon steel:					
331011	Bars and bar shapes	1,000 s. tons..	14.6	9.9	15.1	6.8
331012	Sheet and strip		40.1	17.1	57.1	20.8
331015	Structural shapes				15.8	7.0
331017	Wire and wire products		(S)	6.6	(S)	1.6
331019	All other carbon steel mill shapes and forms		2.2	2.5	1.8	1.0
331020	Alloy steel, except stainless		(S)	1.4	1.2	.8
	Stainless steel:					
331033	Sheet and strip		.4	1.0	1.0	1.0
331050	All other stainless steel mill shapes and forms	1,000 s. tons..	.6	1.4	.1	.3
335792	Insulated copper wire and cable, except magnet wire	Mil. lb. (copper content).				
335770	Magnet wire	Million lb	(S)	1.7	.7	1.1
	Copper and copper-base alloy:					
335728	Bare wire (for electrical conduction only)				(D)	(D)
335102	Rod, bar, and mechanical wire, including extruded and/or drawn shapes		.4	.6		
335143	Plate, sheet, and strip, including military cups and discs		.3	.6	(X)	(2)
335152	Pipe and tube		(S)	.1		
	Aluminum and aluminum-base alloy:					
335301	Sheet, plate, and foil		1.9	1.8	1.4	.7
335405	Extruded shapes, including extruded rod, bar, pipe, tube, etc		*2.5	3.0	2.9	2.1
335008	All other aluminum mill shapes and forms (wire, rolled rod and bar, powder, welded tubing, etc.)	Million lb	**.2	.3	(S)	.4
	Castings (rough and semifinished):					
332045	Steel:					
	Purchased	1,000 s. tons..	(S)	4.1	(D)	(D)
	Produced and consumed	1,000 s. tons..	(S)	(X)	(S)	(X)
336100	Aluminum and aluminum-base alloy:					
	Purchased	Million lb	(S)	19.1	(S)	8.3
	Produced and consumed	Million lb	(S)	(X)	(S)	(X)
	Electric motors and generators:					
	Fractional horsepower electric motors (under 1 hp):					
362110	Timing motors, synchronous and subsynchronous:					
	Purchased	Thousands	296.9	4.2	(D)	(D)
	Produced and consumed		(S)	(X)	(S)	(X)
362115	Fractional horsepower electric motors, excluding timing motors:					
	Purchased		1,640.0	23.6	(S)	6.0
	Produced and consumed		(S)	(X)	(S)	(X)
362120	Integral horsepower motors and generators (1 hp and over):					
	Purchased		(S)	.8	(D)	(D)
	Produced and consumed	Thousands	(S)	(X)	(S)	(X)
	Bearings:					
356218	Ball		(X)	2.3	(X)	1.6
356201	Roller		(X)	2.5	(X)	.5
364301	Appliance outlets, switches, lampholders, and other current-carrying wiring devices		(X)	8.6	(X)	4.4
367010	Electron tubes, except X-ray	Millions	(X)	1.7	(X)	(2)
367408	Semiconductors		(X)	12.4	(X)	3.2
367001	Resistors, capacitors, transformers, transducers, and other electronic-type components and accessories, except semiconductors		(X)	22.1	(X)	(2)
357330	Parts and attachments specially designed for electronic computing equipment		(X)	12.5	(X)	(2)
260003	Paper and paperboard products, except paperboard boxes and containers		(X)	23.6	(X)	3 13.0
265001	Paperboard boxes and containers		(X)	15.8	(X)	5 10.0
306902	Fabricated rubber products, except tires, tubes, hose, belting, and gaskets		(X)	5.8	(X)	5 3.0
307902	Fabricated plastics products, except gaskets		(X)	26.0	(X)	5 4.0
344401	Sheet metal products, except stampings		(X)	14.3	(X)	5 5.0
345001	Bolts, nuts, screws, rivets, and screw machine products		(X)	15.7	(X)	5 11.0
346901	Metal stampings		(X)	37.5	(X)	5 6.0
360101	Electrical transmission distribution and control equipment, including switchgear, fuses, transformers, relays, regulators, etc		(X)	11.3	(X)	5 4.0
970099	All other materials and components, parts, containers, and supplies		(X)	535.2	(X)	2 177.1
971000	Materials, parts, containers, and supplies, n.s.k.[3]		(X)	45.7	(X)	23.4

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or less than half the unit of measure specified.

[1]For some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]For 1972, these material codes were included with material code 970099.

[3]Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

[4]For 1977, material codes 362115 and 362120 were combined to avoid disclosing operations of individual companies.

[5]From 1972 Census of Manufactures Supplemental Inquiry: Consumption of Materials, Parts, Containers, and Supplies During 1972 (Form MA-131).

DESCRIPTION OF INDUSTRIES

SERVICE INDUSTRY MACHINES AND MACHINE SHOPS

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code	Title
3581	Automatic Merchandising Machines
3582	Commercial Laundry Equipment
3585	Refrigeration and Heating Equipment
3586	Measuring and Dispensing Pumps
3589	Service Industry Machinery, N.E.C.
3592	Carburetors, Pistons, Rings, and Valves
3599	Machinery, Except Electrical, N.E.C.

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 3581, AUTOMATIC MERCHANDISING MACHINES

This industry comprises establishments primarily engaged in the manufacture of automatic merchandising units, also referred to as vending machines, excluding music, amusement, or gaming machines, and coin-operated mechanisms for such machines.

The total value of shipments for establishments classified in the Automatic Merchandising Machinery industry amounted to $410 million in 1977, an increase of 26 percent from 1972. The value of shipments of products classified as primary to the industry was $396 million, an increase of 29 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were vending machines for beverages, for which shipments increased 39 percent, and vending machines for confections and food, for which shipments increased 34 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $212 million in 1977, was 15 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 8.8 thousand employees, a decrease of 16 percent from 1972. The leading States in employment were Missouri, New Jersey, Arkansas, and California, accounting for approximately 49 percent of the industry's 1977 employment. Data for these States have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided. These same States were in the forefront for 1972, although there has been some shift in the relative importance of individual States.

The 1977 census obtained data on shipments of automatic merchandising machines, except parts only at product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of automatic merchandising machines are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-35U, Vending Machines (Coin Operated). Some of these data are also shown in table 6a.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 8 percent of total value of shipments.

INDUSTRY 3582, COMMERCIAL LAUNDRY EQUIPMENT

This industry comprises establishments primarily engaged in the manufacture of laundry and dry cleaning equipment and pressing machines for commercial and industrial use. Establishments primarily engaged in the manufacture of household laundry equipment, including coin-operated washers and driers, are classified in industry 3633.

The total value of shipments for establishments classified in the Commercial Laundry Equipment industry amounted to

$220 million in 1977, an increase of 40 percent from 1972. The value of shipments of products classified as primary to the industry was $234 million, an increase of 26 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were drying tumblers, for which shipments increased 70 percent. Value added by manufacture, at $117 million in 1977, was 33 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 4.6 thousand employees, a decrease of 4 percent from 1972. The leading States in employment were Ohio, Texas, Kentucky, and Louisiana, accounting for approximately 60 percent of the industry's 1977 employment. Data for Ohio, Kentucky, and Louisiana have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided. These same States were in the forefront for 1972, although there has been some shift in the relative importance of individual States.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 3 percent of total value of shipments.

INDUSTRY 3585, REFRIGERATION AND HEATING EQUIPMENT

This industry comprises establishments primarily engaged in the manufacture of refrigeration equipment and systems and similar equipment for commerical and industrial use; complete air conditioning units for domestic, commercial, and industrial use; and warm air furnaces, except electric. This industry also includes establishments primarily engaged in the manufacture of soda fountains and beer dispensing equipment. Humidifiers and dehumidifiers, except room, are also classified in this industry. Establishments primarily engaged in the manufacture of household refrigerators and home and farm freezers are classified in industry 3632; electric air space heaters in industry 3634; and electric warm air furnaces and other electric comfort heating equipment in industry 3699.

The total value of shipments for establishments classified in the Refrigeration and Heating Equipment industry amounted to $9,638 million in 1977, an increase of 36 percent from 1972. The value of shipments of products classified as primary to the industry was $8,502 million, an increase of 36 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were heat pumps, for which shipments increased from $41 million to $303 million. However, shipments of room air conditioners and warm air furnaces changed only slightly, from $1,026 million in 1972 to $1,058 million in 1977. Value added by manufacture, at $4,469 million in 1977, was 27 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 138.6 thousand employees, a decrease of 8 percent from 1972. The leading States in employment were Ohio, New York, Texas, and Tennessee, accounting for approximately 40 percent of the industry's 1977 employment. Data for New York have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided. This represents a shift from 1972 when Ohio, New York, Michigan, and Texas accounted for approximately 45 percent of the industry's employment.

The 1977 census obtained data on shipments of refrigeration and heating equipment, except parts only at product class levels. This is the source of the data in table 6a described "As reported in census of manufacture." Detailed figures on the shipments of refrigeration and heating equipment are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-35M, Air Conditioning and Refrigeration Equipment. Some of these data are also in table 6a.

The census of manufactures data for industry 3585 include data for "captive" production, i.e., production of air conditioning and refrigeration compressors and condensers for use by the producing company. Most of these captive establishments are part of companies engaged in the manufacture of complete air conditioners, refrigerators, and furnaces.

Establishments of single-unit companies in this industry with up to 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 2 percent of total value of shipments.

INDUSTRY 3586, MEASURING AND DISPENSING PUMPS

This industry comprises establishments primarily engaged in the manufacture of measuring and dispensing pumps commonly used in service and filling stations for dispensing gasoline, oil, and grease, including grease guns. Establishments primarily engaged in the manufacture of pumps and pumping equipment for general industrial use are classified in industry 3561.

The total value of shipments for establishments classified in the Measuring and Dispensing Pumps industry amounted to $376 million in 1977, an increase of 62 percent from 1972. The value of shipments of products classified as primary to the industry was $266 million, an increase of 45 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were gasoline dispensing pumps, for which shipments increased 54 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $218 million in 1977, was 63

percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 7.4 thousand employees, an increase of 3 percent from 1972. The leading States in employment were Indiana, Missouri, North Carolina, and Illinois, accounting for approximately 55 percent of the industry's 1977 employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 2 percent of total value of shipments.

INDUSTRY 3589, SERVICE INDUSTRY MACHINERY, N.E.C.

This industry comprises establishments primarily engaged in the manufacture of machines and equipment, not elsewhere classified, for use in service industries, such as floor sanding machines, industrial vacuum cleaners, scrubbing machines, commercial cooking and food warming equipment, and commercial dishwashing machines. Establishments primarily engaged in the manufacture of household electrical appliances are classified in industry group 363.

The total value of shipments for establishments classified in the Service Industry Machinery, N.E.C. industry amounted to $1,772 million in 1977, an increase of 94 percent from 1972. The value of shipments of products classified as primary to the industry was $1,688 million, an increase of 95 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were commercial cooking and food warming equipment, for which shipments increased 70 percent, and commercial vacuum cleaners, for which shipments increased 74 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $946 million in 1977, was 88 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 32.1 thousand employees, an increase of 32 percent from 1972. The leading States in employment were Illinois, California, and Minnesota, accounting for approximately 35 percent of the industry's 1977 employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 5 percent of total value of shipments.

INDUSTRY 3592, CARBURETORS, PISTONS, RINGS, AND VALVES

This industry comprises establishments primarily engaged in the manufacture of carburetors, pistons, piston rings, and valves. Establishments primarily engaged in the manufacture of metallic packing are classified in industry 3293; and those primarily engaged in the manufacture of machine repair and equipment parts (except electric), on a job or order basis for others in industry 3599.

The total value of shipments for establishments classified in the Carburetors, Pistons, Rings, and Valves industry amounted to $1,401 million in 1977, an increase of 88 percent from 1972. The value of shipments of products classified as primary to the industry was $1,298 million, an increase of 64 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were carburetors, for which shipments increased 81 percent, and pistons and piston rings, for which shipments increased 62 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $925 million in 1977, was 85 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 32.2 thousand employees, an increase of 21 percent from 1972. The leading States in employment were New York, Michigan, Missouri, and Indiana, accounting for approximately 55 percent of the industry's 1977 employment. Data for New York and Indiana have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided. These same States were in the forefront for 1972, although there has been some shift in the relative importance of individual States.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 2 percent of total value of shipments.

INDUSTRY 3599, MACHINERY, EXCEPT ELECTRICAL, N.E.C.

This industry comprises establishments primarily engaged in the manufacture of machinery and parts except electrical, not elsewhere classified, such as amusement park equipment, pneumatic and hydraulic cylinders, and flexible metal hose and tubing. This industry also includes establishments primarily engaged in producing or repairing machine and equipment parts, not elsewhere classified, on a job or order basis for others. Establishments primarily engaged in the manufacture of metallic packing, formerly classified in this industry, are classified in industry 3293.

The total value of shipments for establishments classified in the Machinery, Except Electric, N.E.C. industry amounted to $6,607 million in 1977, an increase of 80 percent from 1972. The value of shipments of products classified as primary to the industry was $6,441 million, an increase of 92 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) Receipts for machine shop jobwork accounted for $1,836 billion of this change, increasing from $1,426 million in 1972 to $3,262 million in 1977. Value added by manufacture, at $4,435 million in 1977, was 76 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 190.4 thousand employees, an increase of 21 percent from 1972. The leading States in employment were California, Illinois, Ohio, and Texas, accounting for approximately 40 percent of the industry's 1977 employment. Data for Illinois and Ohio have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 23 percent of total value of shipments.

Table 1a. Historical Statisitcs for the Industry: 1977 and Earlier Years

(For explanation of terms, see appendix A)

Year[1]	Companies[2] (no.)	All establishments: Total (no.)	All establishments: With 20 employees or more (no.)	All employees: Number (1,000)	All employees: Payroll (mil. dol.)	Production workers: Number (1,000)	Production workers: Hours (mil.)	Production workers: Wages (mil. dol.)	Value added by manufacture (mil. dol.)	Cost of materials (mil. dol.)	Value of shipments (mil. dol.)	Expenditures and assets: New capital expenditures (mil. dol.)	Expenditures and assets: Gross value of fixed assets (mil. dol.)	End-of-year inventories (mil. dol.)	Ratios: Specialization (percent)	Ratios: Coverage (percent)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. N.E.C. Not elsewhere classified. [r]Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus, these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

(For explanation of terms, see appendix A)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. Summary Statistics for the Industry: 1977

[For explanation of terms, see appendix A]

Item	Unit of measure	Automatic merchandising machines (SIC 3581)	Commercial laundry equipment (SIC 3582)	Refrigeration and heating equipment (SIC 3585)	Measuring and dispensing pumps (SIC 3586)	Service industry machinery, n.e.c. (SIC 3589)	Carburetors, pistons, rings, and valves (SIC 3592)	Machinery, except electrical, n.e.c. (SIC 3599)
Primary product specialization ratio[1]	percent	94	90	89	51	91	82	96
Coverage ratio[2]	do	93	81	95	82	90	87	94

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

(For explanation of terms, see appendix A. For description of annual survey of manufactures (ASM), see appendix B)

Item	Automatic merchandising machines (SIC 3581)		Commercial laundry equipment (SIC 3582)		Refrigeration and heating equipment (SIC 3585)		Measuring and dispensing pumps (SIC 3586)	
	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)

End of year	281.2	6	538.9	1	2,616.5	1
Depreciation charges during 1977	21.9	9	30.7	2	227.7	4
Buildings and other structures	5.7	11	3.7	2	22.5	7
Machinery and equipment	16.2	13	27.1	2	205.3	5

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

[For explanation of terms, see appendix A]

Industry and employment size class	E[1]	All establishments (no.)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)	End-of-year inventories (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)

Table 5b. Industry-Product Analysis — Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. n.e.c. Not elsewhere classified.
[1]Data are not available because industry was created in 1972.

Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

1977 product code	Industry and miscellaneous receipts	Other industries
	Other industries with over $5 million shipments of primary products:	
3581-	3651 Radio and television receiving sets	(D)
3582-	3633 Household laundry equipment	(D)
3585-	3433 Heating equipment, except electric	35.7
	3443 Fabricated plate work (boiler shops)	(D)
	3494 Valves and pipe fittings	11.6
	3519 Internal combustion engines, n.e.c	(D)
	3523 Farm machinery and equipment	(D)
	3551 Food products machinery	(D)
	3559 Special industry machinery, n.e.c	(D)
	3563 Air and gas compressors	(D)
	3568 Power transmission equipment, n.e.c	(D)
	3621 Motors and generators	(D)
	3631 Household cooking equipment	(D)
	3632 Household refrigerators and freezers	(D)
	3633 Household laundry equipment	(D)
	3694 Engine electrical equipment	(D)
	3714 Motor vehicle parts and accessories	36.4
3586-	3546 Power driven hand tools	(D)
	3561 Pumps and pumping equipment	(D)
	3824 Fluid meters and counting devices	(D)
3589-	2842 Polishes and sanitation goods	(D)
	3079 Miscellaneous plastics products	(D)
	3536 Hoists, cranes, and monorails	(D)
	3564 Blowers and fans	20.3
3589-	3569 General industrial machinery, n.e.c	(D)
	3631 Household cooking equipment	(D)
	3639 Household appliances, n.e.c	(D)
	3711 Motor vehicles and car bodies	(D)
	3823 Process control instruments	(D)
3592-	3325 Steel foundries, n.e.c	(D)
	3561 Pumps and pumping equipment	(D)
	3694 Engine electrical equipment	(D)
	3714 Motor vehicle parts and accessories	(D)
3599-	3443 Fabricated plate work (boiler shops)	14.5
	3469 Metal stampings, n.e.c	(D)
	3494 Valves and pipe fittings	18.7
	3531 Construction machinery	14.9
	3542 Machine tools, metal forming types	(D)
	3544 Special dies, tools, jigs, and frames	(D)
	3551 Food products machinery	(D)
	3555 Printing trades machinery	(D)
	3559 Special industry machinery, n.e.c	(D)
	3561 Pumps and pumping equipment	30.5
	3569 General industrial machinery, n.e.c	15.9
	3644 Noncurrent-carrying wiring devices	(D)
	3714 Motor vehicles parts and accessories	28.7
	3795 Tanks and tank components	(D)
	3811 Engineering and scientific instruments	(D)
	3822 Environmental controls	(D)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

Table 6a. Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation, see appendix A, Value of shipments)

1977 product code	Product	Unit of measure	1977			1972	
			Number of companies with shipments of $100,000 or more	Product shipments[1]		Product shipments	
				Quantity[2]	Value (million dollars)	Quantity	Value (million dollars)
	AUTOMATIC MERCHANDISING MACHINES						
3581- --	Total		(NA)	(X)	396.2	(X)	306.3
35811 --	Automatic merchandising machines, coin operated (vending), excluding parts:						
	As reported in the census of manufactures		36	(X)	294.9	(X)	231.5

See footnotes at end of table.

Table 6a. **Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972**—Con.

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation, see appendix A, Value of shipments)

1977 product code	Product	Unit of measure	1977			1972	
			Number of companies with shipments of $100,000 or more	Product shipments[1]		Product shipments	
				Quantity[2]	Value (million dollars)	Quantity	Value (million dollars)
	REFRIGERATION AND HEATING EQUIPMENT--Con.						
35853 --	Commercial refrigeration equipment	.....	(NA)	(X)	759.4	(X)	482.3
	Refrigerated enclosures, including self-contained units, remote units with or without condensing units, and cabinets excluding cabinets shipped to other manufacturers of commercial refrigeration equipment:						
35853 12	Sectional coolers or cooling rooms of the prefabricated (factory produced) type, including walk-in, roll-in, and combination cooler-display types	Thousands.....	52	(S)	158.6	38.8	89.9
	Reach-in refrigerators and reach-in type vertical display cabinets, with solid or glazed doors:						
35853 15	For normal temperature application, i.e., not intended for frozen foods, ice cream, etc.		29	74.0	68.2	78.7	52.0
35853 18	For low temperature application		26	29.9	53.9	45.2	33.8
	Display cases for meats, dairy products, produce, and other perishables, operated at normal temperatures:						
35853 22	Closed		13	**11.2	16.2	10.1	8.7
	Open, self-service:						
35853 23	One level		9	26.0	30.8	25.3	23.8
35853 28	Multilevel		12	31.7	62.9	30.6	38.5
	Display cases and cabinets for frozen foods, ice cream, and other foods operated at low temperatures, except coin-operated:						
	Frozen food display cases, open, self-service:						
35853 31	One level		10	32.2	39.2	56.7	39.3
35853 33	Multilevel		6	11.0	32.6	18.1	34.7
35853 35	Frozen food cabinets, closed, other than reach-in type		5	**6.4	6.6	2.5	3.5
35853 36	Ice cream counter freezers, including frozen custard machines		3	(S)	9.8	([16])	([16])
35853 38	Ice cream dispensing and hardening cabinets		6	12.3	17.5	(S)	6.9
	Mechanical drinking water coolers:						
35853 43	As reported in census of manufactures		12	(X)	70.6	(X)	49.4
	As reported in Current Industrial Reports MA-35M, Air Conditioning and Refrigeration Equipment, Including Warm Air Furnaces		(NA)	335.2	65.2	331.5	48.9
	Mechanical beverage cooling and dispensing equipment, except coin-operated:						
35853 52	Bottled beverages coolers, dry and wet types		13	(S)	21.5	(S)	9.7
35853 57	Bulk beverage dispensers, including malt dispensers and pre-cooler cabinets		12	(S)	67.3	120.0	18.7
35853 73	Farm and dairy milk coolers, including immersion type and bulk tank storage coolers		4	(S)	16.7	5.3	12.1
35853 85	Shipping casks for nuclear materials (with integral electric units)	Thousands.....	-	-	-		
35853 97	Other commercial refrigerators, including dough retarders, egg refrigerators, environmental control equipment, laboratory and industrial refrigerators, mortuary refrigerators, etc	.....	26	(X)	62.5	(S)	[16]41.1
35853 00	Commercial refrigeration equipment, n.s.k	.....	(NA)	(X)	24.5	(X)	20.2
35854 --	Compressors and compressor units, all refrigerants:[17]						
	As reported in census of manufactures	.....	40	(X)	1,580.3	(X)	1,065.4
	As reported in Current Industrial Reports MA-35M, Air Conditioning and Refrigeration Equipment, Including Warm Air Furnaces	Number.....	(NA)	23,991,643	1,508.9	16,692,137	761.6
	10 hp and under, hermetic type motor compressors:						
35854 11	2.5 hp and under		(NA)	11,159,547	507.9	6,990,225	255.1
35854 36	3 hp to 10 hp		(NA)	1,886,268	265.2	(D)	(D)
	10 hp and under, open type compressors (with or without motors):						
35854 74	3 hp and under		(NA)	16,789	3.7	18,762	1.6
35854 75	4 hp to 10 hp		(NA)			3,181	1.0
	Over 10 hp (open and hermetic types):						
35854 46	15 hp		(NA)	75,939	57.2	7,216	3.4
35854 47	20 hp		(NA)			7,501	4.0
35854 48	25 hp		(NA)			9,667	5.5
35854 49	30 hp		(NA)			3,619	2.9
35854 51	40 hp		(NA)			6,316	5.2

Table 6a. **Products and Product Classes—Quantity and Value of Shipments by All Producers: 1977 and 1972**—Con.

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation, see appendix A, Value of shipments)

1977 product code	Product	Unit of measure	1977			1972	
			Number of companies with shipments of $100,000 or more	Product shipments[1]		Product shipments	
				Quantity[2]	Value (million dollars)	Quantity	Value (million dollars)
	MACHINERY, EXCEPT ELECTRICAL, N.E.C.--Con.						
35995 --	Receipts for machine shop jobwork:						
35995 11	Receipts for machine shop jobwork[4]	.....	5,191	(X)	3,338.1	(X)	1,425.8
35990 00	Miscellaneous machinery, except electrical, n.e.c., typically for establishments with 10 employees or more (see note)	.....	(NA)	(X)	1,124.2	(X)	670.8
35990 02	Miscellaneous machinery, except electrical, n.e.c., typically for establishments with less than 10 employees (see note)	.....	(NA)	(X)	845.7	(X)	635.0

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. [r]Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

[1]Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[3]These are primarily coffee vending machines though they may also vend hot chocolate and/or hot soup from the same cabinet.

[4]15 to 25 percent of quantity was estimated.

[5]Some vending machines designed and sold to handle bottled soft drinks are also adaptable to canned beverages through the use of a conversion kit. For this reason number of factory-shipped dispensers for canned beverages may be somewhat less than number of vending machines put into service.

[6]Includes vending machines for beverages such as milk in quart and half gallon containers and for packaged dry ingredients for mixing into beverages, etc.

[7]Over 50 percent of quantity was estimated.

[8]For 1977, product codes 35811 27, 35811 25, and 35811 24 were included with product code 35811 29.

[9]Includes vending machines for bulk popcorn.

[10]Includes vending machines for such products as aspirin, cigars, combs, cosmetics, pencils, paper, and newspapers. Included are multipurpose machines for nonfood and nonbeverage items.

[11]Defined as factory selected combinations of heating and cooling components or assemblies intended to serve an individual room and comprised of (1) heating assembly available with element for use with hot water, steam, and electricity; means for forced heated air circulation and distribution; integral or remote temperature controls, (2) slide-in cooling section with complete refrigerant cycle, (3) room cabinet, (4) provision for outdoor air intake and discharge, and accessories as required for mounting in a building wall, (5) provisions for air filtration and ventilations, (6) permanent individual branch circuit wiring with a suitable line cord or terminating at a junction box within the room cabinet, and (7) provision for free conditioned air distribution, or when forced circulation is employed for minimal duct work having a total external static resistance not exceeding 1/10-inch water.

[12]For 1977, product code 35851 81 was included with product codes 35851 83 and 35851 84 to avoid disclosing operations of individual companies.

[13]Both quantity and value figures exclude systems assembled from purchased components and installed at passenger automobile assembly lines. In addition, for the systems shown, the values are understated because of the exclusion of compressors for some systems.

[14]Excludes quantity of air conditioning coils.

[15]For 1972, includes 6,718 remote condensor units valued at $11.2 million which could not be incorporated into the 1977 product categories.

[16]For 1972, product code 35853 36 was included with product code 35853 97 to avoid disclosing operations of individual companies.

[17]Represents only those compressors and compressor units produced and shipped separately. Includes units shipped for household refrigerators.

[18]For 1977, product code 35860 41 was combined with product code 35860 98 to avoid disclosing operations of individual companies.

[19]For 1972, product codes 35992 31, 35992 33, and 35992 37 were included with product code 35994 98.

[20]Consists principally of receipts for work done on materials owned by others. Some of receipts for such work done by other industries may have been reported as miscellaneous receipts.

Table 6b. Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

Product class and geographic area	Value of product shipments	
	1977	1972
35811, AUTOMATIC MERCHANDISING MACHINES		
United States	294.9	231.5
East North Central Division:		
Illinois	15.5	16.7
Pacific Division:

(NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

[2]For 1963 and earlier years, rebuilt carburetors were included with product class 35994.

[3]For 1963 and earlier years, parts were included with product class 35990.

Table 7. Materials Consumed by Kind: 1977 and 1972

(Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see appendix A, Cost of materials)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publications standards. (X) Not applicable. (Z) Less than 50 thousand dollars or less than half the unit of measure specified.

[1]For some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated. ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]For 1972, these materials were included with material code 970099.

[3]From 1972 Census of Manufactures Supplemental Inquiry: Comsumption of Materials, Parts, Containers, and Supplies During 1972 (Form MA-131).

[4]Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

[5]For 1977, material codes 331020 and 332050 were combined to avoid disclosing operations of individual companies.

INDUSTRY STATISTICS

1a. Historical Statistics: 1977 and Earlier Years 7
1b. Selected Operating Ratios: 1977 and Earlier Years 9
2. Geographic Area: 1977 and 1972 11
3a. Summary Statistics: 1977 14
3b. Supplemental Statistics Based on Sample Estimates: 1977 15
4. Employment Size of Establishment: 1977 17
5a. Industry and Primary Product Class Specialization: 1977 19

PRODUCT STATISTICS

5b. Industry-Product Analysis—Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967 21
5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977 22
6a. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1977 and 1972 24
6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972 36
6c. Product Classes—Value Shipped by All Producers: 1962, 1967, 1972 to 1977 39

MATERIAL STATISTICS

7. Materials Consumed by Kind: 1977 and 1972 40

DESCRIPTION OF INDUSTRIES

ELECTRICAL MEASUREMENT AND DISTRIBUTION EQUIPMENT

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3612 Transformers
3613 Switchgear and Switchboard Apparatus
3621 Motors and Generators
3622 Industrial Controls
3623 Welding Apparatus, Electric
3624 Carbon and Graphite Products
3629 Electrical Industrial Apparatus, N.E.C.

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 3612, TRANSFORMERS

This industry comprises establishments primarily engaged in the manufacture of power distribution, instrument, and specialty transformers. Establishments primarily engaged in the manufacture of radio frequency or voice frequency transformers, coils, or chokes are classified in industry 3677, and resistance welder transformers in Industry 3623.

The total value of shipments for establishments classified in the Transformers industry amounted to $2,202 million in 1977, an increase of 51 percent from 1972. The value of shipments of products classified as primary to the industry was $2,118 million, an increase of 47 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were power and distribution transformers, for which shipments increased 45 percent, and specialty transformers, for which shipments increased 52 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $1,163 million in 1977, was 54 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 43.3 thousand employees, a decrease of 7 percent from 1972. The leading States in employment were Pennsylvania, Wisconsin, Massachusetts, and Illinois, accounting for approximately 40 percent of the industry's 1977 employment. Data for Pennsylvania and Massachusetts have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided. These same States were in the forefront for 1972, although there has been some shift in the relative importance of individual States.

The 1977 census obtained data on shipments of fluorescent lamp ballasts only at product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of fluorescent lamp ballasts are reported quarterly in the Census Bureau's Current Industrial Reports (CIR) MQ-36C, Fluorescent Lamp Ballasts. Some of these data are also shown in table 6a.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 2 percent of total value of shipments.

INDUSTRY 3613, SWITCHGEAR AND SWITCHBOARD APPARATUS

This industry comprises establishments primarily engaged in the manufacture of switchgear and switchboard apparatus. Important products of this industry include power switches, circuit breakers, power switching equipment, and similar switchgear for general industrial application; switchboards and cubicles, control and metering panels, power fuse mountings; and similar switchboard apparatus and supplies. Establishments primarily engaged in the manufacture of industrial controls are classified in industry 3622, and those manufacturing current-carrying wiring devices in industry 3643.

The total value of shipments for establishments classified in the Switchgear and Switchboard Apparatus industry amounted

to $3,541 million in 1977, an increase of 67 percent from 1972. The value of shipments of products classified as primary to the industry was $3,298 million, an increase of 60 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were control circuit relays for which shipments increased 59 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $2,152 million in 1977, was 65 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 71.4 thousand employees, an increase of 3 percent from 1972. The leading States in employment were Pennsylvania, California, Illinois, and New Jersey, accounting for approximately 45 percent of the industry's 1977 employment. Data for Pennsylvania have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

The 1977 census obtained data on shipments of most types of switchgear and switchboard apparatus only at product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of switchgear and switchboard apparatus are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-36A, Switchgear, Switchboard Apparatus, Relays and Industrial Controls. Some of these data are also shown in table 6a.

The establishments in this industry with less than 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 4 percent of total value of shipments.

INDUSTRY 3621, MOTORS AND GENERATORS

This industry comprises establishments primarily engaged in the manufacture of electric motors (except starting motors) and power generators; motor generator sets; railway motors and control equipment; and motors, generators, and control equipment for gasoline, electric, and oil electric buses and trucks. Establishments primarily engaged in the maufacture of turbogenerators are classified in industry 3511, and starting motors and battery charging generators for internal combustion engines in industry 3694.

The total value of shipments for establishments classified in the Motors and Generators industry amounted to $4,459 million in 1977, an increase of 77 percent from 1972. The value of shipments of products classified as primary to the industry was $4,976 million, an increase of 89 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were fractional horsepower motors, for which shipments increased 72 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $2,607 million in 1977, was 77 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 96.9 thousand employees, an increase of 7 percent from 1972. The leading States in employment were New York, Ohio, Indiana, and Arkansas, accounting for approximately 32 percent of the industry's 1977 employment. Data for Arkansas have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided. These same States were in the forefront for 1972 when they accounted for approximately 48 percent of the industry's employment although there has been some shift in the relative importance of individual States.

The 1977 census obtained data on shipments of motors and generators only at product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of motors and generators are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-36H, Motors and Generators. Some of these data are also shown in table 6a.

The establishments in this industry with less than 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 3 percent of total value of shipments.

INDUSTRY 3622, INDUSTRIAL CONTROLS

This industry comprises establishments primarily engaged in the manufacture of motor starters and controllers; control accessories, electronic controls, and other industrial controls. Establishments primarily engaged in the manufacture of automatic temperature controls are classified in industry 3822, and industrial process instruments in industry 3823.

The total value of shipments for establishments classified in the Industrial Controls industry amounted to $2,515 million in 1977, an increase of 79 percent from 1972. The value of shipments of products classified as primary to the industry was $2,429 million, an increase of 95 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were a.c. full voltage starters, 600 volts or less, for which shipments increased 92 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $1,604 million in 1977, was 79 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 55.5 thousand employees, an increase of 10 percent from 1972. The leading States in employment were Wisconsin, Illinois, Ohio, and North Carolina, accounting for approximately 45 percent of the industry's 1977 employment. This represents a shift from 1972 when Wisconsin, Illinois, Ohio, and New York accounted for approximately 49 percent of the industry's employment.

The 1977 census obtained data on shipments of industrial controls only at product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of industrial controls are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-36A, Switchgear, Switchboard Apparatus, Relays, and Industrial Controls. Some of these data are also shown in table 6a.

The establishments in this industry with less than 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 5 percent of total value of shipments.

INDUSTRY 3623, WELDING APPARATUS, ELECTRIC

This industry comprises establishments primarily engaged in the manufacture of electric welding apparatus and accessories. Establishments primarily engaged in coating welding wire from purchased wire or from wire drawn in the same establishment are also included. Establishments primarily engaged in the manufacture of gas welding apparatus are classified in industry 3549, and laser; electron beam, and ultrasonic welding machines and equipment in industry 3662.

The total value of shipments for establishments classified in the Welding Apparatus, Electric industry amounted to $1,191 million in 1977, an increase of 81 percent from 1972. The value of shipments of products classified as primary to the industry was $1,035 million, an increase of 82 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were arc welding machines, for which shipments increased 87 percent, and arc welding electrodes, for which shipments increased 108 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $583 million in 1977, was 65 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 17.5 thousand employees, an increase of 13 percent from 1972. The leading States in employment were Ohio, Michigan, Wisconsin, and Pennsylvania, accounting for approximately 49 percent of the industry's 1977 employment. Data for Wisconsin have been withheld to avoid disclosing operations of individual companies.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 2 percent of total value of shipments.

INDUSTRY 3624, CARBON AND GRAPHITE PRODUCTS

This industry comprises establishments primarily engaged in the manufacture of lighting carbons; carbon, graphite, and metal graphite brushes and brush stocks; carbon or graphite electrodes for thermal and electrolytic uses; and other carbon, graphite, and metal graphite products.

The total value of shipments for establishments classified in the Carbon and Graphite Products industry amounted to $735 million in 1977, an increase of 95 percent from 1972. The value of shipments of products classified as primary to the industry was $663 million, an increase of 97 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were electrodes, for which shipments increased 164 percent. Value added by manufacture, at $408 million in 1977, was 88 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 12.1 thousand employees, an increase of 7 percent from 1972. The leading States in employment were Pennsylvania, New York, Ohio, and North Carolina, accounting for approximately 60 percent of the industry's 1977 employment. Data for North Carolina have been withheld to avoid disclosing operations of individual companies.

The establishments in this industry with less than 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3629, ELECTRICAL INDUSTRIAL APPARATUS, N.E.C.

This industry comprises establishments primarily engaged in the manufacture of industrial and commercial electric apparatus and equipment, not elsewhere classified, such as blasting machines, and fixed and variable capacitors, condensers, and rectifiers for industrial application. Establishments primarily engaged in the manufacture of condensers, capacitors, and rectifiers for electronic end products are classified in industry group 367.

The total value of shipments for establishments classified in

the Electrical Industrial Apparatus, N.E.C. industry amounted to $692 million in 1977, an increase of 54 percent from 1972. The value of shipments of products classified as primary to the industry was $700 million, an increase of 58 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were rectifying apparatus, except for electronic application, for which shipments increased 103 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $411 million in 1977, was 52 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 16.5 thousand employees, a decrease of 18 percent from 1972. The leading States in employment were Ohio, New York, Illinois, and Indiana, accounting for approximately 32 percent of the industry's 1977 employment. Data for New York and Illinois have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

The establishments in this industry with less than 20 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 5 percent of total value of shipments.

Table 1a. Historical Statistics for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year[1]	Companies[2] (no.)	All establishments: Total (no.)	All establishments: With 20 employees or more (no.)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Expenditures and assets: New capital expenditures (million dollars)	Expenditures and assets: Gross value of fixed assets (million dollars)	End-of-year inventories (million dollars)	Ratios: Specialization (percent)	Ratios: Coverage (percent)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. r Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. **Summary Statistics for the Industry: 1977**

[For explanation of terms, see appendix A]

Item	Unit of measure	Transformers (SIC 3612)	Switchgear and switchboard apparatus (SIC 3613)	Motors and generators (SIC 3621)	Industrial controls (SIC 3622)	Welding apparatus, electric (SIC 3623)	Carbon and graphite products (SIC 3624)	Electrical industrial apparatus, n.e.c. (SIC 3629)
Primary product specialization ratio[1]	percent	95	91	92	87	86	94	87
Coverage ratio[2]	do	97	91	80	86	94	93	81
All establishments	number	279	667	446	727	176	74	223
With 1 to 19 employees	do	136	352	148	443	89	26	121
With 20 to 99 employees	do	65	173	111	180	49	24	57
With 100 employees or more	do	78	142	187	104	38	24	45
All employees, average for year	1,000	43.3	71.4	96.9	55.5	17.5	12.1	16.5
Payroll for year, all employees	mil. dol.	529.6	896.1	1 176.7	727.5	285.7	164.1	188.6
Production workers:								
Average for year	1,000	32.8	51.7	74.1	35.4	11.3	9.0	12.2
March	do	32.1	50.5	72.9	34.5	11.1	8.9	12.0
May	do	32.6	51.1	74.4	35.1	11.3	9.1	12.1
August	do	32.7	52.3	73.2	35.1	11.3	9.1	12.2

January to March	do	14.8	24.1	35.7	16.6	5.6	4.3	5.8
April to June	do	16.3	25.0	37.6	17.4	6.0	4.5	5.9
July to September	do	14.7	24.2	34.6	17.1	5.7	4.5	5.6
October to December	do	16.6	25.7	37.7	18.0	5.8	4.4	6.1
Wages	mil. dol.	349.8	556.8	802.1	380.6	165.1	110.9	113.4
Cost of materials, etc.	do	1 061.8	1 429.8	1 915.9	963.3	634.2	337.5	294.0
Materials, parts, containers, etc., consumed	do	1 018.6	1 202.0	1 796.6	869.5	577.5	217.1	263.5
Resales	do	11.5	183.5	37.0	63.0	33.1	66.9	18.3
Fuels consumed	do	11.8	9.5	21.2	5.8	5.1	21.2	2.8
Purchased electric energy	do	18.2	21.8	37.0	15.9	7.8	29.1	5.7
Contract work	do	1.8	13.0	24.1	9.1	10.7	3.2	3.7
Value of shipments, including resales	do	2 201.8	3 541.0	4 458.7	2 514.6	1 191.2	735.2	692.4
Value of resales	do	11.1	242.6	48.2	88.5	43.6	70.9	24.7
Value added by manufacture	do	1 162.7	2 151.8	2 606.9	1 604.2	582.7	408.4	411.0
Manufacturers' inventories:								
Beginning of year	do	344.1	594.3	678.0	564.7	226.2	200.0	123.3
Finished products	do	80.7	141.4	154.8	135.4	76.0	37.2	23.5
Work in process	do	140.4	253.5	287.2	221.1	57.5	124.9	45.1
Materials, supplies, fuel, etc.	do	123.0	199.4	236.0	208.1	92.7	37.9	54.7
End of year	do	385.8	647.5	770.3	616.8	258.3	215.9	140.0
Finished products	do	97.4	154.1	185.0	147.6	87.4	38.7	25.0
Work in process	do	146.3	281.5	321.1	261.9	71.8	134.1	56.3
Materials, supplies, fuel, etc.	do	142.1	211.8	264.2	207.4	99.1	43.2	58.7
Capital expenditures for plant and equipment	do	70.9	77.6	168.5	62.3	44.8	35.9	17.6
New capital expenditures	do	67.2	73.1	160.9	57.6	38.7	35.4	16.8
New buildings and other structures	do	8.7	15.8	28.3	12.8	14.5	4.6	3.8
New machinery and equipment	do	58.5	57.3	132.6	44.8	24.1	30.8	13.0
Used capital expenditures	do	3.7	4.5	7.6	4.7	6.1	0.5	0.8

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

End of year	251.8	5	487.0	3	196.7	5
Depreciation charges during 1977	15.5	8	26.8	6	15.1	5
Buildings and other structures	3.5	14	4.1	5	1.9	9
Machinery and equipment	12.1	7	22.8	7	13.2	4

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuning ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

[For explanation of terms, see appendix A]

Industry and employment size class	E[1]	All establishments (no.) Covered by administrative records[2]	E0	85	0.6	6.3	0.5	0.8	4.2	13.1	8.9	22.0	0.6	4.8

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)

See footnotes at end of table

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977—Con.

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)				
3624	**Carbon and graphite products:**										
	Entire industry	74	12.1	164.1	9.0	17.7	110.9	408.4	337.5	735.2	35.4
	Establishments with 75 percent specialization or more	64	10.7	148.0	8.0	15.6	100.4	375.7	319.7	685.2	33.7
36241	Electrodes, carbon and graphite:										
	Establishments with this product class primary	9	4.7	67.6	3.5	7.0	48.0	189.4	219.7	407.1	21.0

36293	Electrical equipment for industrial use, n.e.c.:										
	Establishments with this product class primary	40	4.0	42.1	2.9	5.5	24.7	79.5	57.1	133.7	2.9
	Establishments with 75 percent specialization or more in class	35	(D)	(D)	(D)	(D)	(D)	(D)	(D)	(D)	(D)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. Industry-Product Analysis — Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

1977 product code	Product group, product class, and miscellaneous receipts	All industries	Transformers (SIC 3612)	Switchgear and switchboard apparatus (SIC 3613)	Motors and generators (SIC 3621)	Industrial controls (SIC 3622)	Welding apparatus, electric (SIC 3623)	Carbon and graphite products (SIC 3624)	Electrical industrial apparatus, n.e.c. Table 5c. **Industry-Product Analysis—Shipments by Product Class and Industry: 1977**—Con.

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

1977 product code	Product group, product class, and miscellaneous receipts	All industries	Transformers (SIC 3612)	Switchgear and switchboard apparatus (SIC 3613)	Motors and generators (SIC 3621)	Industrial controls (SIC 3622)	Welding apparatus, electric (SIC 3623)	Carbon and graphite products (SIC 3624)	Electrical industrial apparatus, n.e.c. 36131 --	Switchgear, except ducts and control circuit relays:			
	As reported in census of manufacturers	116	841.4	597.1
	As reported in Current Industrial Reports MA-36A, Switchgear, Switchboard Apparatus, Relays, and Industrial Controls	(NA)	r845.0	564.1
36131 11	Automatic and manual control panels (generators, transformers, feed-controls, etc.)	(NA)	80.0	33.4
36131 09	Metal-clad switchgear (using power circuit breakers, oil and oilless); all voltages above 1,000 volts up to and including 38 kV, excluding load interrupter switch gear	(NA)	254.5	
36131 10	Metal-enclosed load interrupter switchgear assemblies, all voltages, including parts	(NA)	41.6	
36131 13	Metal-enclosed low-voltage power circuit breaker switchgear assemblies, 1,000 volts and below, including parts, but excluding load interrupter switchgear	(NA)	88.0	266.3
36131 17	Metal-enclosed bus (sold separately), above 1,000 volts, including isolated, segregated, nonsegregated, and cable bus	(NA)	30.3	
36131 31	Relays, switchgear type excluding industrial control type; regulators; and miscellaneous switchboard devices (sold separately)	(NA)	96.4	75.6
	Power switching equipment, including attachments, auxiliaries, bus supports and fittings, accessories, and single phase circuit reclosers, but excluding power fuses sold separately, 2,300 volts and over:			
36131 41	Outdoor, excluding structures	(NA)	100.5	87.1
36131 45	Indoor	(NA)	6.2	5.1
36131 51	Power fuses and fuse links for 2,300 volts and over, a.c. service, excluding distribution cutouts	(NA)	38.3	13.6
36131 81	Power and ground connectors generally used in substation construction	(NA)	8.4	
36131 91	Overhead transmission and distribution connectors (clamps, taps, terminals, and splices)	(NA)		
36131 93	Transmission and distribution connectors, n.e.c., including underground deadends, hotline taps, stirrups, repair sleeves, etc	(NA)	67.9	52.0
36131 83	Distribution cutouts	(NA)	32.9	31.0
36132 --	Power circuit breakers, all voltages:			
	As reported in census of manufactures	25	261.2	182.7
	As reported in Current Industrial Reports MA-36A, Switchgear, Switchboard Apparatus, Relays, and Industrial Controls	(NA)	260.4	172.7
36132 15	Power circuit breakers (sold separately) for use in metal-clad switchgear (oil and oilless), over 1,000 volts, including parts	(NA)	39.5	
36132 20	Power circuit breakers, free standing, oil and oilless, from 15.5 kV and above, including parts	(NA)	120.3	
36132 25	Power circuit breakers (sold separately) in individual enclosures and/or for use in low-voltage switchgear, 1,000 volts and below, including parts, excluding molded case circuit breakers	(NA)	30.9	172.7
36132 30	All other power circuit breakers (sold separately), oil and oilless, network protectors and automatic circuit reclosers, including parts	(NA)	69.7	
36133 --	Low voltage panelboards and distribution boards and other switching and interrupting devices, 750 volts and below:			
	As reported in census of manufactures	121	878.2	539.0
	As reported in Current Industrial Reports MA-36A, Switchgear, Switchboard Apparatus, Relays, and Industrial Controls	(NA)	873.6	555.3
	Panelboards, including enclosing cabinets:			
36133 11	Fusible, including combination switch fuse	(NA)	79.3	52.8
36133 12	Circuit breaker	(NA)	132.7	78.6
	Distribution switchboards:			
36133 15	Fusible	(NA)	60.7	41.3
36133 17	Circuit breaker	(NA)	97.0	54.4
36133 19	Other, including theater switchboards	(NA)	25.0	12.0
	Switches, except switches commonly known as snap, toggle, and rotary switches; and switch devices intended primarily to be used with electric motor controls:			
	Knife switches, enclosed:			
36133 21	Heavy duty	(NA)	58.0	63.1
36133 22	General duty	(NA)	34.7	
	Load centers:			
36133 24	Enclosed fusible, service entrance, and branch circuit cutouts	(NA)	3.7	11.6
36133 26	Circuit breaker	(NA)	173.1	93.3
36133 32	Grouped metering panels (combinations of two or more meters and related switching units with overcurrent protection associated with each meter, including accessory components; excluding single socket load combinations)	(NA)	14.0	
36133 33	Other switches, excluding snap, bolted, toggle, push, etc.; including open knife switches, motor contact, motor disconnect, meter service equipment other than metermounting, and test devices)	(NA)	56.2	148.2
36133 98	Other low voltage switchgear apparatus	(NA)	139.2	

See footnote at end of table.

Table 6a. **Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972** - Con.

(Includes value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation see appendix A, Value of shipments)

1977 product code	Product	1977		1972
		Number of companies with shipments of $100,000 or more	Value of product shipments[1] (million dollars)	Value of product shipments (million dollars)
3613- --	SWITCHGEAR AND SWITCHBORAD APPARATUS--Con.			
36134 --	Fuses and fuse equipment, under 2,300 volts, except power distribution cutouts:			
	As reported in census of manufactures	25	201.6	99.7
	As reported in Current Industrial Reports MA-36A, Switchgear, Switchboard Apparatus, Relays, and Industrial Controls	(NA)	r188.9	92.4
36134 31	Nonrenewable plug fuses	(NA)	20.9	13.5
36134 51	Nonrenewable cartridge fuses	(NA)	83.3	45.3
36134 71	Renewable plug and cartridge fuses, including renewal links	(NA)	11.2	7.6
36134 93	Other fuses and open fuse material, including cutouts, clips, bases, etc	(NA)	73.5	26.0
36135 --	Molded case circuit breakers, 750 volts and below:			
	As reported in census of manufactures	23	492.0	283.0
	As reported in Current Industrial Reports MA-36A, Switchgear, Switchboard Apparatus, Relays, and Industrial Controls	(NA)	r511.2	283.1
36135 11	Industrial type, with or without ground fault detection capability, assembled as complete units in supporting and enclosing housing of insulating materials; with or without accessories or attachments	(NA)	210.9	112.7
36135 12	Residential or light duty type, with or without ground fault detection capability as an integral part, primarily for load center application assembled as complete units in supporting and enclosing housing of insulating materials.	(NA)	208.7	110.9
36135 31	Individually enclosed industrial type, excluding panelboards and busway plugs	(NA)	13.2	
	Other molded case circuit breakers:			
36135 91	Marine and Navy	(NA)	5.3	59.5
36135 92	Aircraft and aerospace	(NA)		
36135 93	Automotive	(NA)	73.1	
36135 94	Electronic	(NA)		
36135 95	All other	(NA)		
36136 --	Ducts, including plug-in units and accessories (not exceeding 750 volts), consisting of enclosed sectionalized prefabricated bus bars rated 20 amperes or more and associated structures and fittings:			
	As reported in census of manufactures	18	88.5	65.7
	As reported in Current Industrial Reports MA-36A, Switchgear, Switchboard Apparatus, Relays, and Industrial Controls	(NA)	84.0	60.5
36136 11	Busways	(NA)	77.2	60.5
36136 31	Trolley type and lighting distribution ducts	(NA)	6.8	
36137 --	Relays, control circuit:			
	As reported in census of manufactures	58	356.3	223.4
	As reported in Current Industrial Reports MA-36A, Switchgear, Switchboard Apparatus, Relays, and Industrial Controls	(NA)	344.1	212.5
36137 01	A.c. and d.c. magnetic control circuit relays, excluding overload relays	(NA)	313.0	212.5
36137 04	Starter accessories, including overload relays	(NA)	31.1	
36130 00	Switchgear and switchboard apparatus, n.s.k., typically for establishments with 10 employees or more (see note)	(NA)	108.5	54.7
36130 02	Switchgear and switchboard apparatus, n.s.k., typically for establishments with less than 10 employees (see note)	(NA)	70.8	13.5

36211 14	4-3/8" diameter and over		(NA)				
	Universal motors, uncased (punching diameter) (consisting of stator, rotor, and brush holder mechanisms, without end shields, bearings, or conventional frame, usually called motor parts):						
36211 15	Less than 2-1/8" diameter		(NA)	6.0	18.0	2.6	5.9
36211 16	2-1/8" diameter and over but less than 2-7/16" diameter		(NA)				
36211 17	2-7/16" diameter and over but less than 2-7/8" diameter		(NA)				
36211 18	2-7/8" diameter and over but less than 3-2/16" diameter		(NA)	.8	5.7	.9	5.5
36211 19	3-3/16" diameter and over but less than 3-11/16" diameter		(NA)	.6	6.6		
36211 20	3-11/16" diameter and over but less than 4-3/8" diameter		(NA)				
36211 21	4-3/8" diameter and over		(NA)				
	Universal motors and generators, direct current (case diameter) excluding automotive starting motors, generators, and accessory motors:						
36211 22	Less than 3" diameter (up to 1/70 hp)		(NA)	5.9	55.0	3.6	22.9
36211 23	3" diameter and over but less than 4-5/8" diameter (1/70 hp and over but less than 1/20 hp)		(NA)	2.4	45.1	.7	15.2
36211 24	4-5/8" diameter and over but less than 6" diameter (1/20 hp and over but less than 1/16 hp)		(NA)	.1	20.0	.1	6.3
36211 25	6" diameter and over but less than 7-1/8" diameter (1/6 hp and over but less than 1 hp)		(NA)	.1	10.4	.2	8.6
36211 26	7-1/8" diameter and over but less than 9" diameter (1/6 hp and over but less than 1 hp)		(NA)	(Z)	2.9	(Z)	1.7
	Universal motors, alternating current:						
	Skeleton type shaded pole motors:						
	Less than 2-3/4" diameter:						
36211 31	Less than 5 mhp		(NA)	10.2	31.0	8.4	21.4
36211 33	Over 5 mhp		(NA)	5.0	12.6		
	2-3/4" diameter and over:						
36211 35	Less than 5 mhp		(NA)	4.4	14.1	3.4	9.9
36211 37	5 mhp and over but less than 35 mhp		(NA)	5.9	14.9		
36211 39	35 mhp and over		(NA)				
	Conventional type shaded pole motors (case diameters):						
36211 41	Less than 1-1/2" diameter, all horsepower ratings built in this diameter		(NA)	5.6	18.2	15.8	41.3
	1-1/2" diameter and over but less than 2-1/2" diameter:						
36211 42	Less than 5 mhp		(NA)				
36211 43	5 mhp and over but less than 16 mhp		(NA)				
36211 44	16 mhp and over		(NA)	14.6	72.2		
	2-1/2" diameter and over but less than 3-3/4" diameter:						
36211 45	Less than 16 mhp		(NA)	7.8	37.7	15.5	46.9
36211 46	16 mhp and over but less than 1/20 hp		(NA)	3.2	17.7	1.6	5.7
36211 47	1/20 hp and over but less than 1/10 hp		(NA)				
36211 48	1/10 hp and over		(NA)				
	3-3/4" diameter and over but less than 4-1/2" diameter:						
36211 49	Less than 16 mhp		(NA)	1.1	13.0	.5	3.1
36211 51	16 mhp and over but less than 1/20 hp		(NA)			.4	3.1
36211 52	1/20 hp and over but less than 1/10 hp		(NA)			.3	2.5
36211 53	1/10 hp and over		(NA)				
	4-1/2" diameter and over but less than 5-1/4" diameter:						
36211 54	Less than 1/20 hp		(NA)	2.2	28.4	3.0	17.0
36211 55	1/20 hp and over but less than 1/10 hp		(NA)	1.6	16.6	1.4	11.9
36211 56	1/10 hp and over but less than 1/6 hp		(NA)	.5	6.9		
36211 57	1/6 hp and over but less than 1/4 hp		(NA)	.3	4.8		
36211 58	1/4 hp and over		(NA)				
36211 59	5-1/4" diameter but less than 9" diameter, all hp ratings		(NA)	1.7	24.1	2.4	22.7
	Other a.c. motors (case diameter), including subfractional and fractional synchronous and subsynchronous timing motors, other than clock type:						
36211 61	Less than 2-1/2" diameter, all hp ratings built in this diameter	Millions	(NA)	.3	16.3	.1	7.2

See footnotes at end of table.

Table 6a. **Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972** - Con

36212 --	Integral horsepower motors and generators, except for land transportation equipment--Con.						
	As reported in Current Industrial Reports MA-36H, Motors and Generators--Con.						
	Alternating current generators, excluding all arc welding generators, generators used as an integral part of land transportation equipment, steam, gas, and hydraulic turbine driven generators, and aircraft and space generators:						
36212 51	450 r/min and slower speed (all kW ratings)	Thousands	(NA)	-	-	(Z)	1.2
	Over 450 r/min:						
36212 53	3/4 to 5 kW		(NA)	12.4	2.1	7.2	1.5
36212 54	5.1 to 15 kW		(NA)	10.5	8.7	3.8	2.2
36212 55	15.1 to 50 kW		(NA)	10.7	17.4	3.6	3.3
36212 56	50.1 to 150 kW		(NA)	4.4	11.8	2.3	4.0
36212 57	150.1 to 400 kW		(NA)	4.0	19.2	1.4	4.5
36212 59	Over 400 kW	Thousands	(NA)	9.2	56.7	1.0	15.6
36213 --	Land transportation motors, generators, control equipment and parts:						
	As reported in census of manufactures		(NA)	(X)	205.7	(X)	106.3
	As reported in Current Industrial Reports MA-36H, Motors and Generators		(NA)	(X)	198.8	(X)	112.8
36213 11	Railway motors and generators, including those used for control purposes for trolley cars, trolley coaches, rapid transit cars, trolley locomotives, multiple unit cars for railway service, and mining locomotives; and parts and supplies		(NA)	18.3	18.3	(X)	18.7
36213 31	Motors and generators, including those used for control purposes for gasoline-electric and diesel-electric buses, trucks, locomotives, rail cars; and parts and supplies		(NA)				
36213 51	All other land transportation motors, including those used for control purposes for storage battery powered transportation equipment, industrial trucks, mining locomotives, and other transportation equipment; and parts and supplies		(NA)	191.5	122.3	(X)	51.6
36213 98	Other electrical apparatus for land transportation equipment		(NA)	(X)	58.2	(X)	42.5
36214 --	Prime mover generator sets, except steam or hydraulic turbine:						
	As reported in census of manufactures		36	(X)	643.9	(X)	247.3
	As reported in Current Industrial Reports MA-36H, Motors and Generators		(NA)	(X)	649.3	(X)	249.6
	Generator set units, except steam and water turbine sets:						
	Gas and/or gasoline engine driven generator sets:						
	A.c. and d.c. output:						
36214 03	Under 3/4 kW	Thousands	(NA)	211.7	80.5	156.0	53.8
36214 04	3/4 kW to 5 kW		(NA)				
36214 05	5.1 kW to 15 kW		(NA)	41.3	46.5	20.4	19.5
36214 07	15.1 kW to 35 kW		(NA)	5.4	11.1	1.1	2.8
36214 08	35.1 kW to 100 kW		(NA)	1.1	6.3	1.2	4.8
36214 09	100.1 kW and over		(NA)	.2	6.1	.6	7.2
	Diesel engine-driven generator sets:						
	A.c. and d.c. output:						
36214 41	14 kW and under		(NA)	9.3	22.0	4.6	7.9
36214 42	14.1 kW to 50 kW		(NA)	5.5	33.3	2.4	12.4
36214 43	50.1 kW to 100 kW		(NA)	3.3	36.9	2.0	10.7
36214 24	100.1 kW to 200 kW		(NA)	5.0	58.7		
36214 25	200.1 kW to 400 kW		(NA)	5.6	99.8	4.3	63.0
36214 26	400.1 kW to 600 kW		(NA)	1.8	65.8		
36214 27	600.1 kW to 800 kW		(NA)	.5	34.2		
36214 28	800.1 kW to 1,000 kW		(NA)	.5	45.3		
36214 29	1,000.1 kW to 1,999 kW		(NA)	.1	26.5		
36214 30	2,000.1 kW to 3,000 kW		(NA)	.2	[7]76.3	.2	38.3
36214 31	3,000.1 kW and over		(NA)				
	Dual fuel (oil and gas) engine generator sets:						
	A.c. and d.c. output:						
36214 52	Under 2,000 kW		-	[7]	[7]	.1	19.9
36214 53	2,000 kW and over		(NA)				
36214 75	Other generator set units, including wind driven, except steam and water turbine sets and motor generator sets	Thousands	-	-	-	(S)	9.3

See footnotes at end of table.

Table 6a. **Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972** - Con.

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation see appendix A, Value of shipments)

1977 product code	Product	Unit of measure	1977			1972	
			Number of companies with shipments of $100,000 or more	Product shipments[1]		Product shipments	
				Quantity	Value (million dollars)	Quantity	Value (million dollars)
3621- --	MOTORS AND GENERATORS--Con.						
36217 --	Fractional horsepower motor-generator sets and other rotating equipment, including hermetic motors:						
	As reported in census of manufactures	.....	34	(X)	274.5	(X)	228.8
	As reported in Current Industrial Reports MA-36H, Motors and Generators	.....	(NA)	(X)	256.8	(X)	(NA)
36217 21	Fractional horsepower, motor-generator sets, a.c. and d.c. output (less than 3/4 kW)	Thousands	(NA)	11.9	2.5	8.5	1.9
	Other rotating equipment:						
36217 53	Synchros, servos, rate generators, resolvers, and combinations, including subfractional (under 1/600 hp) motors	.....	(NA)	(X)	71.7	(X)	41.6
36217 57	Synchro-type components	.....	(NA)	(X)	1.2		
36217 97	Hermetic motors (5.5-inch stator core diameter and smaller)	Thousands	(NA)	15,258.8	158.1	19,200	[8]227.9
36217 98	All other fractional rotating equipment	.....	(NA)	(X)	23.3	(X)	[9]11.8
36218 --	Integral horsepower motor-generator sets and other rotating equipment, including hermetic motors:						
	As reported in census of manufactures	.....	37	(X)	288.1	(X)	122.9
	As reported in Current Industrial Reports MA-36H, Motors and Generators	.....	(NA)	(X)	275.2	(X)	(NA)
36218 11	Synchronous converters and double current generators	Thousands	(NA)	.7	2.0	3.3	2.2
	Integral horsepower motor-generator sets:						
	A.c. output, based on the rating of the largest a.c. generator:						
36218 32	3/4 to 150 kW		(NA)	4.1	22.6	7.1	14.7
	Over 170 kW		(NA)	.2	4.9	.1	4.8
36218 33	D.c. output, based on the rating of the largest d.c. generator:						
36218 34	3/4 to 150 kW		(NA)	4.6	49.6	5.0	22.3
36218 36	Over 170 kW		(NA)				
	Other rotating equipment:						
36218 97	Hermetic motors (over 5.5-inch stator core diameter)	Thousands	(NA)	6,725.7	176.7	([8])	([8])
36218 98	All other integral rotating equipment	.....	(NA)	(X)	19.4	(X)	([9])
36219 --	Parts and supplies for motors, generators, and motor-generator sets, except for land transportation equipment:						
36219 11	Parts and supplies for motors, generators, and motor-generator sets, except for land transportation equipment, excluding motors for built-in jobs	.....	76	(X)	354.0	(X)	188.6
36210 00	Motors and generators, n.s.k., typically for establishments with 10 employees or more	.....	(NA)	(X)	63.4	(X)	30.5
36210 02	Motors and generators, n.s.k., typically for establishments with less than 10 employees	.....	(NA)	(X)	27.3	(X)	5.9

1977 product code	Product	1977		1972

36290 02	Electrical industrial apparatus, n.s.k., typically for establishments with less than 20 employees (see note)	.....	(NA)	(X)	22.0	(X)	6.5

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

Footnotes continued on next page.

Table 6a. **Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972** – Con.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. [r]Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or less than half the unit of measure specified.

[1]Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[3]In 1977, product codes 36124 61, 36124 65, and 36124 66 were combined to avoid disclosing operations of individual companies.

[4]In 1972, product codes 36125 45, 36125 46, and 36125 95 were combined to avoid disclosing operations of individual companies.

[5]In 1972, product codes 36125 60 and 36125 00 were combined to avoid disclosing operations of individual companies.

[6]In 1972, product codes 36212 01 and 36212 48 were combined to avoid disclosing operations of individual companies

[7]For 1977, product code 36214 53 was combined with product codes 36214 30 and 36214 31 to avoid disclosing operations of individual companies.

[8]For 1972, product code 36218 97 was combined with product code 36217 97 to avoid disclosing operations of individual companies.

[9]For 1972, data were not available separately for product codes 36217 98 and 36218 98.

[10]For 1972, product codes 36220 15 and 36220 21 were included with product code 36220 97.

[11]For 1972, product codes 36220 49 was included with product code 36220 75.

[12]For 1972, product code 36293 25 was included with product code 36293 98 to avoid disclosing operations of individual companies.

Table 6b. Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

335770	Magnet wire	Million lb	11.4	15.5	[5]	[5]
	Copper and copper-base alloy:					
335728	Bare wire for electrical conduction only		3.4	6.1	6.6	6.8
335102	Rod, bar, and mechanical wire, including extruded and/or drawn shapes		([10])	([10])	([10])	([10])
335143	Plate, sheet, and strip, including military cups and discs		.5	.6	.5	.6
335152	Pipe and tube		[10].9	[10]1.1	[10]6.1	[10]4.7
	Aluminum and aluminum-base alloy:					
335301	Sheet, plate, and foil		6.0	8.0	4.7	3.0
335405	Extruded shapes, including extruded rod, bar, pipe, tube, etc					
335008	All other aluminum mill shapes and forms (wire, rolled rod and bar, powder, welded tubing, etc.)	Million lb	10.6	7.0	12.2	4.6
331001	Steel:					
	Purchased	1,000 s. tons	15.6	8.7	([11])	([11])
	Produced and consumed	1,000 s. tons	(S)	(X)	(S)	(X)
367408	Semiconductors	Millions	19.0	9.1	10.6	6.3
260001	Paper and paperboard products		(X)	23.5	(X)	[3]18.0
286556	Pitch		(X)	([11])	(NA)	([11])
299901	Coke: petroleum coke, metallurgical coke, calcined coke, foundry coke, etc. used as raw material	1,000 s. tons	(NA)	([11])	(NA)	([11])
326400	Porcelain, steatite, and other ceramic electrical products		(X)	14.7	(X)	[3]10.0
329508	Natural graphite	1,000 s. tons	-	-	(NA)	([11])
360101	Electric transmission, distribution, and control equipment		(NA)	([11])	(NA)	([11])
970099	All other materials and components, parts, containers, and supplies		(X)	[11]124.4	(X)	[11]83.2
971000	Materials, parts, containers, and supplies, n.s.k.[5]		(X)	39.0	(X)	30.4

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or less than half the unit of measure specified.

[1]For some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]For 1972, material code 333401 was included with material code 970099.

[3]From 1972 Census of Manufactures Supplemental Inquiry: Consumption of Materials, Parts, Containers, and Supplies During 1972 (Form MA-131).

[4]Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

[5]For 1972, material code 335770 was included with material codes 335792 and 335793.

[6]For 1972, material codes 356810, 356601, 333977, 362001, and 360101 were included in material code 970099.

[7]For 1972, material code 326400 was included with material code 970099.

[8]For 1972, material code 335770 was included with material code 970099.

[9]For 1972, these material codes were included with material code 970099.

[10]For 1977 and 1972, material code 335102 was included with material code 335152.

[11]For 1977 and 1972, these material codes were included with material code 970099.

Description of Industries 3

TABLES

INDUSTRY STATISTICS

1a. Historical Statistics: 1977 and Earlier Years 7
1b. Selected Operating Ratios: 1977 and Earlier Years 9
2. Geographic Area: 1977 and 1972 11
3a. Summary Statistics: 1977 14
3b. Supplemental Statistics Based on Sample Estimates: 1977 . . . . . 15A
4. Employment Size of Establishment: 1977 17
5a. Industry and Primary Product Class Specialization: 1977 18

PRODUCT STATISTICS

5b. Industry-Product Analysis—Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967 20
5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977 21
6a. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1977 and 1972 23
6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972 30
6c. Product Classes—Value Shipped by All Producers: 1963, 1967, 1972 to 1977 31

MATERIAL STATISTICS

7. Materials Consumed by Kind: 1977 and 1972 32

HOUSEHOLD APPLIANCES

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3631 Household Cooking Equipment
3632 Household Refrigerators and Freezers
3633 Household Laundry Equipment
3634 Electric Housewares and Fans
3635 Household Vacuum Cleaners
3636 Sewing Machines
3639 Household Appliances, N.E.C.

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contact work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 3631, HOUSEHOLD COOKING EQUIPMENT

This industry comprises establishments primarily engaged in the manufacture of household cooking equipment, such as stoves, ranges, and ovens. Establishments primarily engaged in the manufacture of household cooking appliances, such as hot plates, grills, percolators, and toasters, are classified in industry 3634. Establishments primarily engaged in the manufacture of commercial cooking equipment are classified in industry 3589.

The total value of shipments for establishments specified in the Household Cooking Equipment industry amounted to $1,707 million in 1977, an increase of 82 percent from 1972. The value of shipments of products classified as primary to the industry was $1,819 million, an increase of 77 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were electric ranges and ovens, for which shipments increased 11 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $784 million in 1977, was 90 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 25.4 thousand employees, an increase of 9 percent from 1972. The leading States in employment were Tennessee, Illinois, Kentucky, and Ohio, accounting for approximately 55 percent of the industry's 1977 employment. Data for Kentucky and Ohio have been withheld to avoid disclosing operations of individual companies; however, employment size ranges are provided.

The 1977 census obtained data on shipments of household cooking equipment only at broad product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of household cooking equipment are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-36F, Major Household Appliances. Some of these data are also shown in table 6a.

Establishments of single-unit companies in this industry with up to 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3632, HOUSEHOLD REFRIGERATORS AND FREEZERS

This industry comprises establishments primarily engaged in the manufacture of household refrigerators and freezers. Establishments primarily engaged in the manufacture of commercial and industrial refrigeration equipment, packaged room coolers, and all refrigeration compressor and condenser units are classified in industry 3585, and room dehumidifiers are classified in industry 3634.

The total value of shipments for establishments specified in the Household Refrigerators and Freezers industry amounted to $2,577 million in 1977, an increase of 50 percent from 1972. The value of shipments of products classified as primary to the industry was $2,006 million, an increase of 41 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The product accounting for a significant portion of this change was household refrigerators, for which shipments increased 36 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $1,166 million in 1977, was 47 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 35.8 thousand employees, an increase of 5 percent from 1972. The leading States in employment were Ohio, Indiana, Illinois, and Kentucky, accounting for approximately 65 percent of the industry's 1977 employment. Data for all States have been withheld to avoid disclosing operations of individual companies; however, employment size ranges are provided.

The 1977 census obtained data on shipments of household refrigerators and freezers only at broad product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of household refrigerators and freezers are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-36F, Major Household Appliances. Some of these data are also shown in table 6a.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3633, HOUSEHOLD LAUNDRY EQUIPMENT

This industry comprises establishments primarily engaged in the manufacture of washing machines, dryers, ironers, and wringers for household use. Establishments primarily engaged in the manufacture of commercial laundry equipment are classified in industry 3582.

The total value of shipments for establishments specified in the household laundry equipment industry amounted to $1,793 million in 1977, an increase of 32 percent from 1972. The value of shipments of products classified as primary to the industry was $1,697 million, an increase of 32 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The product accounting for a significant portion of this change was washing machines, for which shipments increased 32 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $845 million in 1977, was 23 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 19.4 thousand employees, a decrease of 18 percent from 1972. The leading States in employment were Ohio, Iowa, Kentucky, and Michigan, accounting for approximately 80 percent of the industry's 1977 employment. Data for these States have been withheld to avoid disclosing operations of individual companies; however, employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3634, ELECTRIC HOUSEWARES AND FANS

This industry comprises establishments primarily engaged in the manufacture of electric housewares for heating, cooking, and other purposes; and electric fans including ventilating and exhaust household-type fans. Important products in this industry include electric air heaters, electrically heated bed coverings, blenders, broilers, deep fat fryers, flat irons, food mixers, hot plates, percolators and coffeemakers, roasters, toasters, desk and bracket fans, hassock and floor fans, window-type propeller fans, rollabout fans, and household and kitchen ventilating and exhaust fans. Establishments primarily engaged in the manufacture of industrial and commercial blowers, industrial and commercial exhaust and ventilating fans, and attic fans are classified in industry 3564.

The total value of shipments for establishments specified in the electric housewares and fans industry amounted to $2,531 million in 1977, an increase of 57 percent from 1972. The value of shipments of products classified as primary to the industry was $2,304 million, an increase of 59 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were electric housewares, except fans, for which shipments increased 56 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value addded by manufacture, at $1,366 million in 1977, was 50 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 47.3 thousand employees, a decrease of 8 percent from 1972. The leading States in employment were North Carolina, Wisconsin, Ohio, and Tennessee, accounting for approximately 40 percent of the industry's 1977 employment. Data for Ohio have been withheld to avoid disclosing operations of individual companies; however, employment size ranges are provided.

The 1977 census obtained data on shipments of electric houseware and fans only at broad product class levels. This is the source of the data in table 6a described "As reported in census of manufacures." Detailed figures on the shipments of electric housewares and fans are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-36E, Electric Housewares and Fans. Some of these data are also shown in table 6a.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3635, HOUSEHOLD VACUUM CLEANERS

This industry comprises establishments primarily engaged in the manufacture of household vacuum cleaners. Establishments primarily engaged in the manufacture of commercial vacuum cleaners are classified in industry 3589.

The total value of shipments for establishments specified in the household vacuum cleaners industry amounted to $644 million in 1977, an increase of 38 percent from 1972. The value of shipments of products classified as primary to the industry was $710 million, an increase of 62 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were power units for central vacuum systems, for which shipments increased 1,396 percent. Value added by manufacture, at $380 million in 1977, was 27 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 10.4 thousand employees, a decrease of 7 percent from 1972. The leading States in employment were Ohio, Illinois, Connecticut, and New Jersey, accounting for approximately 90 percent of the industry's 1977 employment. Data for Illinois, Connecticut, and New Jersey have been withheld to avoid disclosing operations of individual companies; however, employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3636, SEWING MACHINES

This industry comprises establishments primarily engaged in the manufacture of sewing machines for household and industrial use.

The total value of shipments for establishments specified in the Sewing Machines industry amounted to $306 million in 1977, an increase of 92 percent from 1972. The value of shipments of products classified as primary to the industry was $260 million, an increase of 71 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) Value added by manufacture, at $210 million in 1977, was 195 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 8.2 thousand employees, an increase of 55 percent from 1972. The leading States in employment were New Jersey, South Carolina, Illinois, and New York, accounting for approximately 90 percent of the industry's 1977 employment. Data for New Jersey, South Carolina, and Illinois have been withheld to avoid disclosing operations of individual companies; however, employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 5 percent of total value of shipments.

INDUSTRY 3639, HOUSEHOLD APPLIANCES, N.E.C.

This industry comprises establishments primarily engaged in the manufacture of household appliances, not elsewhere classified, such as water heaters, dishwashers, and food-waste disposers. Establishments primarily engaged in the manufacture of similar products for commercial and industrial use are classified in industry 3589.

The total value of shipments for establishments specified in the household appliances, n.e.c. industry amounted to $1,184 million in 1977, an increase of 74 percent from 1972. The value of shipments of products classified as primary to the industry was $1,383 million, an increase of 68 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The product accounting for a significant portion of this change was dishwashers, for which shipments increased 50 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $528 million in 1977, was 55 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 15.7 thousand employees, an increase of 12 percent from 1972. The leading States in employment were Kentucky, Tennessee, Illinois, and Indiana, accounting for approximately 75 percent of the industry's 1977 employment. Data for Illinois and Indiana have been withheld to avoid disclosing operations of individual companies; however, employment size ranges are provided.

The 1977 census obtained data on shipments of household appliances, n.e.c. only at broad product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of household appliances, n.e.c. are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-36F, Major Household Appliances. Some of these data are also shown in table 6a.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

Table 1a. Historical Statistics for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year[1]	Companies[2] (no.)	All establishments: Total (no.)	All establishments: With 20 employees or more (no.)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Expenditures and assets: New capital expenditures (million dollars)	Expenditures and assets: Gross value of fixed assets (million dollars)	End-of-year inventories (million dollars)	Ratios: Specialization (percent)	Ratios: Coverage (percent)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. r Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

Pacific Division:														
California	-	13	5	CC	(D)	(D)	(D)	(D)	(D)	(D)	(D)	(D)	(NA)	(D)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. Summary Statistics for the Industry: 1977

[For explanation of terms, see appendix A]

Item	Unit of measure	Household cooking equipment (SIC 3631)	Household refrigerators and freezers (SIC 3632)	Household laundry equipment (SIC 3633)	Electric housewares and fans (SIC 3634)	Household vacuum cleaners (SIC 3635)	Sewing machines (SIC 3636)	Household appliances, n.e.c (SIC 3639)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Buildings and other structures	1.8	4	0.8	8	3.8	3
Machinery and equipment	9.3	4	7.1	6	12.8	3

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

This page is intentionally blank.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

[For explanation of terms, see appendix A]

Industry and employment size class	E[1]	All establishments (no.) - Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. Industry-Product Analysis — Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. (D) Withheld to avoid disclosing operations of individual companies. n.e.c. Not elsewhere classified.

Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

Table 5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977—Con.

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

36390 00	Household appliances, n.e.c., n.s.k., typically for establishments with 20 employees or more	.....	(NA)	(X)	8.1	(X)	10.8
36390 02	Household appliances, n.e.c., n.s.k., typically for establishments with less than 20 employees	.....	(NA)	(X)	9.2	(X)	2.0

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. r Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

[1] For 1977, data for product codes 36311 80 and 36311 72 were combined to avoid disclosing operations of individual companies.

[2] For 1972, data for electric ranges 33 inches and over in width and high-low oven, were included with product code 36311 80, Other electric ranges, n.e.c.

[3] For 1972, product classes 36313 and 36314 were classified as 36312.

[4] 10 to 25 percent of quantity was estimated.

[5] For 1972, value of parts was not collected separately but was included in value of parts in Industry 3585, Refrigeration and Heating Equipment.

[6] For 1972, data for product codes 36331 51, 36331 81, and 36331 85 were combined to avoid disclosing operations of individual companies.

[7] For 1977, product codes 36345 13, 36345 15, 36345 83, 36345 85, 36345 88, and 36345 97 were combined with product code 36345 98 to avoid disclosing operations of individual companies.

[8] For 1972, product codes 36345 91, 36345 97, and 36345 98 were combined to avoid disclosing operations of individual companies.

[9] 10 percent or more of quantity was estimated.

[10] Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[11] For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[12] For 1972, product codes 36350 11 and 36350 71 were combined to avoid disclosing operations of individual companies.

[13] Product codes 36361 21, 36361 84, and 36362 85 were combined to avoid disclosing operations of individual companies.

[14] Excludes value of product code 36392 32.

[15] For 1972, product code 36394 72 was included with product code 36399 60.

[16] For 1972, product codes 36394 98 and 36399 93 were included with product code 36399 00.

Table 6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

(NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product-class level, estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]Withheld because estimated figure is negative. This is consequence of using difference method of estimation (see Estimating Procedures in appendix B) and of improved establishment reporting that resulted in changing classification of shipments from n.s.k. code for 1972 Census to specified 5-digit product classes for this year. Four-digit total is best estimate, even though smaller than sum of 5-digit values.

[3]Prior to 1977 parts were included with data for complete units.

Table 7. Materials Consumed by Kind: 1977 and 1972

(Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see appendix A, Cost of materials)
